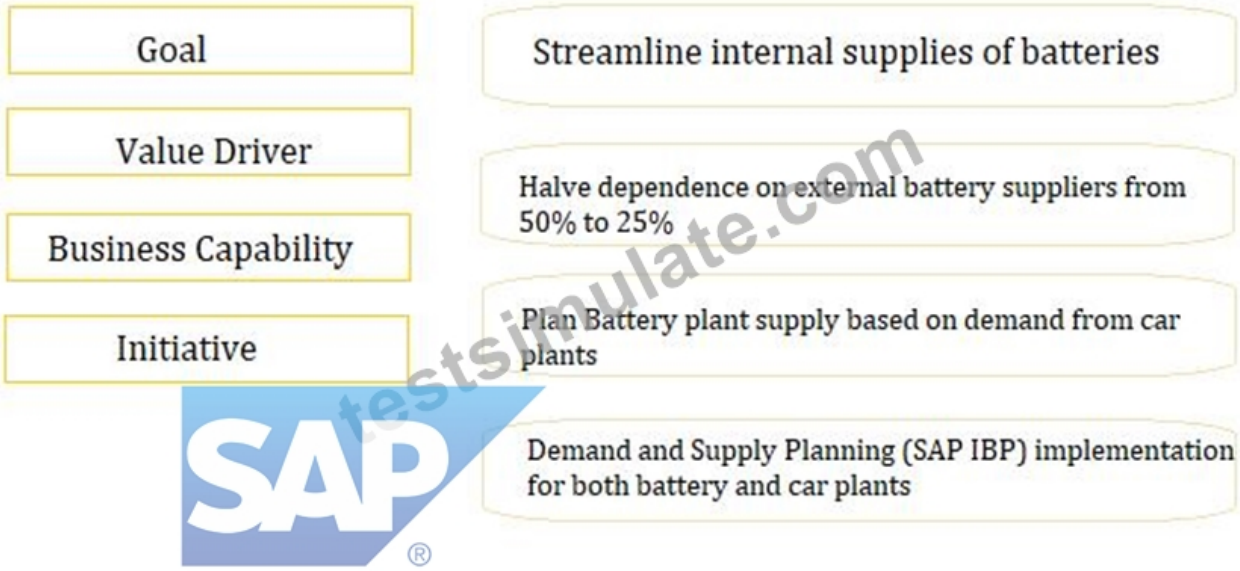
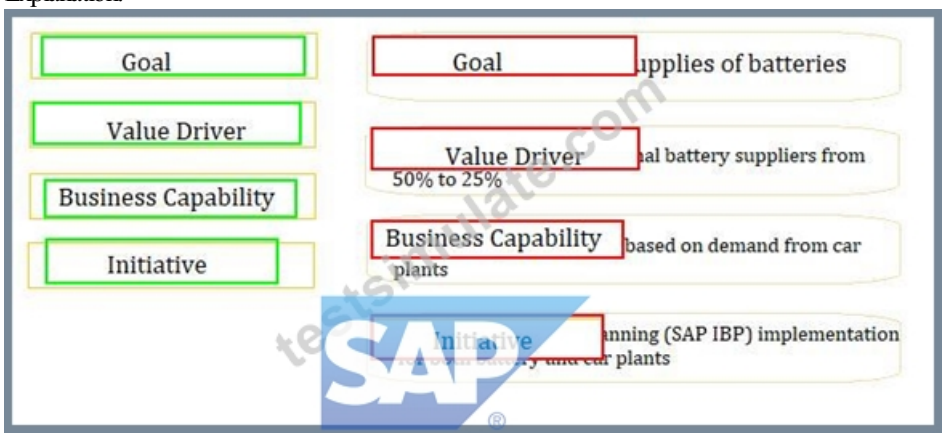
## SAP Certified Professional - SAP Enterprise Architect Sample Questions (Q11-Q16):

**NEW QUESTION # 11**
You, as the Chief Enterprise Architect of Wanderlust GmbH, have been trying to formulate the Business Strategy Map. You are currently working on the strategic objective to "Increase supply reliability of Lithium batteries". Arrange the elements of the Business Strategy Map into the right order that shows the dependencies between these elements.



**Answer:**

Explanation:



**NEW QUESTION # 12**
When creating an application architecture roadmap, the WHAT and WHERE are defined in a rather straightforward way, while the WHOM may differ by context. Multiple roadmap clusters may apply a variety of WHOM dimensions. For example, procurement

vs. asset management. Which of the following definitions are correct? Note. There are 3 correct answers to this question.

testsimulate.com

- A. Asset Classes/Vehicles, Production Machines, Office Equipment
- B. Working model/Home office, head quarter, affiliate
- C. Groups of Persons/Permanent Staff, Contracted Staff, Students/Business Expense/Operational expenditure/Capital expenditure
- D. Material Groups/Products, raw materials. Spare parts/Direct Materials, indirect materials

**Answer: B,C,D**

Explanation:
Explanation
The WHOM dimension of an application architecture roadmap defines the different groups of stakeholders or users that are involved in or affected by the application. The WHOM dimension can vary depending on the context and the scope of the roadmap. For example, in the context of procurement vs. asset management, the WHOM dimension could include material groups/products, groups of persons, and working model as possible clusters. These clusters represent different categories of items, people, and locations that are relevant for the procurement and asset management processes. For example:
Material groups/products: This cluster could include different types of materials or products that are procured or managed by the organization, such as raw materials, spare parts, direct materials, or indirect materials. These categories could have different requirements, standards, or regulations that affect the application architecture.
Groups of persons: This cluster could include different types of people that are involved in or benefit from the procurement and asset management processes, such as permanent staff, contracted staff, or students. These groups could have different roles, responsibilities, or access rights that affect the application architecture.
Working model: This cluster could include different modes or locations of work that are supported by the procurement and asset management processes, such as home office, head quarter, or affiliate. These modes or locations could have different technical, legal, or organizational implications that affect the application architecture.

The other option (A) is not a correct definition of a WHOM dimension cluster, because it does not represent a group of stakeholders or users, but rather a group of assets or resources that are managed by the organization.
Asset classes/vehicles, production machines, and office equipment are examples of WHAT dimension clusters, which define the different types of assets or resources that are relevant for the application architecture.

**NEW QUESTION # 13**
In the SAP Enterprise Architecture Framework, which of the following artifacts are part of the opportunities & solution phase?
Note: There are 3 correct answers to this question.

- A. Application Architecture Roadmap
- B. Implementation Roadmap
- C. Migration plan
- D. Business Architecture Roadmap
- E. Work Breakdown structure

**Answer: A,D,E**

Explanation:

testsimulate.com

**NEW QUESTION # 14**
Wanderlust's numbers for order booking have been on a free-fall, ever since a recent economic downturn reduced showroom footfall to near zero. To counter the drop in in-person bookings, the CEO and CIO have been looking to revive their online channel, which was started six years ago. However, this channel was seldom used before the pandemic, which has led to a complete breakdown of Wanderlust's online marketing business ecosystem. Also of major concern, is their existing Non-SAP Marketing application, which lays unused due to poor integration with SAP CRM. As Chief Enterprise Architect, you have been approached by the CEO to document the online marketing business ecosystem first. Which of the following actions would you do to meet your CEO s request? Note: There are 2 correct answers to this question

- A. Identify the key organizational units, partners, and stakeholder groups that make up the online marketing ecosystem.
- B. Identify a suitable online marketing application that is better integrated with SAP CRM and ECC and can replace the existing one.
- C. Draw an organization map highlighting the inter relationships and hierarchies amongst the above organizational units, partners, and stakeholder groups.
- D. Identify the online marketing business capabilities and processes.

**Answer: A,D**

Explanation:
Explanation
Identifying the online marketing business capabilities and processes will help to understand the current state of the ecosystem and identify the areas where improvement is needed. For example, if the ecosystem does not have the ability to track leads or manage customer relationships, then these will be areas that need to be addressed.
Identifying the key organizational units, partners, and stakeholder groups that make up the online marketing ecosystem will help to

understand the relationships between the different entities in the ecosystem and identify the dependencies between them. For example, if the marketing team relies on the sales team to provide leads, then this dependency will need to be considered when designing the new ecosystem.
The other two options, Identifying a suitable online marketing application that is better integrated with SAP CRM and ECC and can replace the existing one and Drawing an organization map highlighting the inter relationships and hierarchies amongst the above organizational units, partners, and stakeholder groups, are not as critical at this stage. The application can be identified and the organization map can be drawn once the business capabilities and processes have been identified and the key organizational units, partners, and stakeholder groups have been identified.
Therefore, the best course of action is to identify the online marketing business capabilities and processes and identify the key organizational units, partners, and stakeholder groups that make up the online marketing ecosystem. This will help to understand the current state of the ecosystem and identify the areas where improvement is needed.

**NEW QUESTION # 15**
In the SAP Enterprise Architecture Framework, which of the following artifacts are part of the opportunities & solution phase?
Note: There are 3 correct answers to this question.

- A. Migration plan
- B. Implementation Roadmap
- C. Application Architecture Roadmap
- D. Work Breakdown structure
- E. Business Architecture Roadmap

**Answer: A,B,E**

Explanation:
In the SAP Enterprise Architecture Framework, the opportunities & solution phase includes developing artifacts that help in visualizing the progression from current operations to the future state. The Business Architecture Roadmap outlines how business strategies will evolve, linking business goals with architectural changes. The Implementation Roadmap provides a detailed plan for the deployment of SAP solutions, including time frames and stages of implementation. The Migration Plan offers a comprehensive strategy for moving from legacy systems to modern SAP solutions, detailing the necessary steps for data migration and system transition.
= These artifacts are described within the framework and guidelines for enterprise architecture development provided by SAP, focusing on ensuring that the solutions proposed are feasible, properly planned, and aligned with the business strategies and objectives.
