## New Databricks-Certified-Data-Analyst-Associate Test Practice & Databricks-Certified-Data-Analyst-Associate Reliable Test Topics

TopExamCollection Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) questions are regularly updated to ensure it remains aligned with the Databricks Databricks-Certified-Data-Analyst-Associate latest exam content. With access to the updated dumps, you can be confident that you always get Databricks-Certified-Data-Analyst-Associate updated questions that are necessary to succeed in your Databricks-Certified-Data-Analyst-Associate Exam and achieve Databricks certification. Furthermore, TopExamCollection offers 1 year's worth of free Databricks-Certified-Data-Analyst-Associate exam questions updates. This valuable inclusion ensures that Databricks-Certified-Data-Analyst-Associate candidates have access to the latest Databricks-Certified-Data-Analyst-Associate exam dumps, even after their initial purchase.

## Databricks Certified Data Analyst Associate Exam Sample Questions (Q16-Q21):

### NEW QUESTION # 16

A data analyst has a managed table `table_name` in database `database_name`. They would now like to remove the table from the database and all of the data files associated with the table. The rest of the tables in the database must continue to exist. Which of the following commands can the analyst use to complete the task without producing an error?

- A. `DELETE TABLE database_name.table_name;`
- B. `DROP TABLE database_name.table_name;`
- C. `DROP TABLE table_name FROM database_name;`
- D. `DROP DATABASE database_name;`

- E. DELETE TABLE table\_name FROM database\_name;

**Answer: B**

Explanation:

The DROP TABLE command removes a table from the metastore and deletes the associated data files. The syntax for this command is DROP TABLE [IF EXISTS] [database\_name.]table\_name;. The optional IF EXISTS clause prevents an error if the table does not exist. The optional database\_name. prefix specifies the database where the table resides. If not specified, the current database is used. Therefore, the correct command to remove the table table\_name from the database database\_name and all of the data files associated with it is DROP TABLE database\_name.table\_name;. The other commands are either invalid syntax or would produce undesired results. Reference: Databricks - DROP TABLE

### NEW QUESTION # 17

Which of the following describes how Databricks SQL should be used in relation to other business intelligence (BI) tools like Tableau, Power BI, and Looker?

- A. As an exact substitute with the same level of functionality
- B. As a complementary tool for professional-grade presentations
- C. As a complete replacement with additional functionality
- D. As a substitute with less functionality
- E. As a complementary tool for quick in-platform BI work

**Answer: E**

Explanation:

Databricks SQL is not meant to replace or substitute other BI tools, but rather to complement them by providing a fast and easy way to query, explore, and visualize data on the lakehouse using the built-in SQL editor, visualizations, and dashboards. Databricks SQL also integrates seamlessly with popular BI tools like Tableau, Power BI, and Looker, allowing analysts to use their preferred tools to access data through Databricks clusters and SQL warehouses. Databricks SQL offers low-code and no-code experiences, as well as optimized connectors and serverless compute, to enhance the productivity and performance of BI workloads on the lakehouse. Reference: Databricks SQL, Connecting Applications and BI Tools to Databricks SQL, Databricks integrations overview, Databricks SQL: Delivering a Production SQL Development Experience on the Lakehouse

### NEW QUESTION # 18

A data engineer is working with a nested array column products in table transactions. They want to expand the table so each unique item in products for each row has its own row where the transaction\_id column is duplicated as necessary. They are using the following incomplete command:

```
SELECT
  transaction_id,
  _____ AS product
FROM transactions;
```

Which of the following lines of code can they use to fill in the blank in the above code block so that it successfully completes the task?

- A. array\_distinct(products)
- B. explode(products)
- C. reduce(products)
- D. array(products)
- E. flatten(products)

**Answer: B**

Explanation:

The explode function is used to transform a DataFrame column of arrays or maps into multiple rows, duplicating the other column's values. In this context, it will be used to expand the nested array column products in the transactions table so that each unique item in products for each row has its own row and the transaction\_id column is duplicated as necessary. Reference: Databricks Documentation I also noticed that you sent me an image along with your message. The image shows a snippet of SQL code that is incomplete. It begins with "SELECT" indicating a query to retrieve data. "transaction\_id," suggests that transaction\_id is one of the columns being selected. There are blanks indicated by underscores where certain parts of the SQL command should be, including

what appears to be an alias for a column and part of the FROM clause. The query ends with "FROM transactions;" indicating data is being selected from a 'transactions' table.

If you are interested in learning more about Databricks Data Analyst Associate certification, you can check out the following resources:

Databricks Certified Data Analyst Associate: This is the official page for the certification exam, where you can find the exam guide, registration details, and preparation tips.

Databricks Certified Data Analyst Associate Certification: This is another blog post that gives an overview of the certification exam and its benefits.

### NEW QUESTION # 19

Which statement describes descriptive statistics?

- A. A branch of statistics that uses a variety of data analysis techniques to infer properties of an underlying distribution of probability.
- B. A branch of statistics that uses summary statistics to categorically describe and summarize data.
- **C. A branch of statistics that uses summary statistics to quantitatively describe and summarize data.**
- D. A branch of statistics that uses quantitative variables that must take on a finite or countably infinite set of values.

**Answer: C**

### NEW QUESTION # 20

Which of the following statements describes descriptive statistics?

- A. A branch of statistics that uses a variety of data analysis techniques to infer properties of an underlying distribution of probability.
- B. A branch of statistics that uses summary statistics to categorically describe and summarize data.
- C. A branch of statistics that uses quantitative variables that must take on an uncountable set of values.
- **D. A branch of statistics that uses summary statistics to quantitatively describe and summarize data.**
- E. A branch of statistics that uses quantitative variables that must take on a finite or countably infinite set of values.

**Answer: D**

Explanation:

Descriptive statistics is a branch of statistics that uses summary statistics, such as mean, median, mode, standard deviation, range, frequency, or correlation, to quantitatively describe and summarize data. Descriptive statistics can help data analysts understand the main features of a data set, such as its central tendency, variability, or distribution. Descriptive statistics can also help data analysts visualize data using charts, graphs, or tables. Descriptive statistics do not make any inferences or predictions about the data, unlike inferential statistics, which use data analysis techniques to infer properties of an underlying population or probability distribution from a sample of data. Reference: Databricks - Descriptive Statistics, Databricks - Data Analysis with Databricks SQL

### NEW QUESTION # 21

.....

Each of us expects to have a well-paid job, with their own hands to fight their own future. But many people are not confident, because they lack the ability to stand out among many competitors. Now, our Databricks-Certified-Data-Analyst-Associate learning material can help you. It can let users in the shortest possible time to master the most important test difficulties, improve learning efficiency. Also, by studying hard, passing a qualifying examination and obtaining a Databricks certificate is no longer a dream. With these conditions, you will be able to stand out from the interview and get the job you've been waiting for.
