## Salesforce Health Cloud Accredited Professional Sample Questions (Q85-Q90):

NEW QUESTION # 85

Bloomington Caregivers has decided to enable Integrated Care Management so that its end users can leverage Health Cloud Assessments. Administrators must now configure their org to be able to use Assessments.

Which three steps should the administrator take as part of the org setup to enable Assessments?

- A. Add the Assessment component to the Patient page.
- B. Enable users to view and complete Assessments.
- C. Enable Discovery Framework in Setup.
- D. Download and Install OmniStudio.
- E. Update sharing settings in Setup.

**Answer: A,B,C**

Explanation:

The three steps that the administrator should take as part of the org setup to enable Assessments are enabling Discovery Framework in Setup, adding the Assessment component to the Patient page, and enabling users to view and complete Assessments. Discovery Framework is a feature that allows the administrator to create and manage assessments in Health Cloud. The Assessment component is a Lightning component that displays the assessments assigned to a patient on their record page. Enabling users to view and complete Assessments requires assigning them the appropriate permission sets and page layouts.

#### NEW QUESTION # 86

Service cloud organization is migrating to health cloud, and only certain teams of users have health cloud use cases . Which Users with health cloud use cases or users who need access to health cloud objects require health cloud permission set licences.

What three types of ancillary information can be included in a single care request.

- A. Care request providers
- B. Care request reviews
- C. Care request diagnosis
- D. Care request drug
- E. Care request facility

**Answer: B,C,D**

Explanation:

Care request reviews (B), Care request drug , and Care request diagnosis (D) are three types of ancillary information that can be included in a single care request. Care request providers (A) and Care request facility (E) are not types of ancillary information, but types of related records that can be associated with a care request.

#### NEW QUESTION # 87

A medical device organization needs to track account information and its geographical details to provide information to representatives onsite. Which three objects support this scenario?

Choose 3 answer

- A. Clinic Location
- B. Facility Address
- C. Healthcare Facility
- D. Account
- E. Location

**Answer: B,C,E**

Explanation:

To track account information and its geographical details, the following objects in Salesforce Health Cloud support the scenario:

Location:

Represents the physical location of a healthcare facility, such as a hospital or clinic.

Tracks details like address, contact information, and geocoordinates for mapping purposes.

Facilitates integration with tools for location-based services or routing.

Healthcare Facility:

Represents the organizational entity (e.g., hospital, clinic, or medical practice).

Stores information about the type of facility, services offered, and affiliations with healthcare networks.

Facility Address:

Stores detailed address information specific to a healthcare facility.

Enables differentiation between multiple addresses for the same facility, such as billing and physical addresses.

Why Not the Other Options?

D . Clinic Location: This object is not part of Health Cloud's standard data model.

E . Account: While Account is central to tracking organization details, it does not specifically address geographical details.

Use Case Implementation: By combining Location, Healthcare Facility, and Facility Address objects, organizations can provide comprehensive geographical and organizational data to representatives, enabling efficient onsite operations.

### NEW QUESTION # 88

While a consultant is implementing Integrated Care Management for a customer, the customer requests that a change is made to the Care Plan creation wizard.

Which underlying component should the consultant customize to achieve this?

- A. Field Sets
- **B. OmniScript**
- C. Flow
- D. FlexCard

**Answer: B**

Explanation:

In Salesforce Health Cloud's Integrated Care Management, the Care Plan creation wizard is built using OmniScript. To customize this wizard, consultants should modify the underlying OmniScript components.

Understanding OmniScript:

Purpose: OmniScript is a declarative tool within Salesforce OmniStudio that enables the creation of guided, interactive workflows, commonly referred to as wizards. These scripts guide users through complex processes, ensuring data consistency and enhancing user experience.

Key Features:

Declarative Configuration: Allows for the creation and modification of scripts without the need for custom code.

Reusable Components: Facilitates the use of pre-built elements to streamline the development process.

Integration Capabilities: Supports integration with various data sources and systems, enabling comprehensive data handling.

Customizing the Care Plan Creation Wizard:

Access the Relevant OmniScript:

Identify the OmniScript associated with the Care Plan creation process. This script defines the steps and user interface elements presented during care plan creation.

Modify the OmniScript:

Add or Remove Steps: Adjust the sequence of steps to align with the desired workflow.

Customize Input Fields: Alter field properties, such as labels, default values, and validation rules, to meet specific requirements.

Incorporate Business Logic: Implement conditional logic to tailor the user experience based on input data or user roles.

Test the Customized OmniScript:

Conduct thorough testing to ensure that the modifications function as intended and provide a seamless user experience.

Reference:

Create an Enhanced Care Plan Using Care Plan Templates: For insights into how OmniScript is utilized in the care plan creation process, refer to Salesforce's documentation: Create an Enhanced Care Plan Using Care Plan Templates Create Care Plans from Care Gaps by Using an OmniScript Flow: To understand the application of OmniScript in creating care plans from care gaps, see:

Create Care Plans from Care Gaps by Using an OmniScript Flow Conclusion:

Customizing the Care Plan creation wizard in Integrated Care Management involves modifying the associated OmniScript. By tailoring this script, consultants can enhance the care plan creation process to better meet the specific needs of their organization.

### NEW QUESTION # 89

A hospital system wants to track patient relationships to its cardiologist, primary care physician, and oncologist. Which object should a consultant recommend to implement?

- **A. Patient Provider Relationship**

- B. Affiliation Relationship
- C. Contact-Contact Relationship
- D. Healthcare Practitioner Facility

**Answer: A**

Explanation:

D is correct because Patient Provider Relationship is the standard object in Health Cloud that is used to track patient relationships to healthcare practitioners, such as cardiologist, primary care physician, and oncologist. Patient Provider Relationship represents the association between a patient and a healthcare practitioner who provides care for the patient. This object can store information such as the practitioner's specialty, role, contact details, and relationship status.

## NEW QUESTION # 90

.....
