We have different CSC2 prep guide buyers from all over the world, so we pay more attention to the customer privacy. Because we are in the same boat in the market, our benefit is linked together. If your privacy let out from us, we believe you won't believe us at all. That's uneconomical for us. In the website security, we are doing well not only in the purchase environment but also the CSC2 Exam Torrent customers' privacy protection. We are seeking the long development for CSC2 prep guide.

## CSI Canadian Securities Course Exam2 Sample Questions (Q156-Q161):

### NEW QUESTION # 156

An emerging Canadian company is exploring the possibility of using hot water springs to produce clear energy for remote rural communities. The company has strong human resource capital and few assets, and raised SI 20,000 through the Capital Pool Company program. Which option is best for this company to continue maximizing public exposure and raising capital?

- A. Crowdfunding
- B. Filing disclosure documents with SEDAR+.
- C. Escrowing shares
- D. offering a greenshee option

**Answer: A**

Explanation:

For an emerging company with limited assets and innovative goals, crowdfunding is an excellent option to maximize public exposure and raise capital. Crowdfunding involves soliciting small investments from a large number of people, typically through online platforms, making it ideal for startups or innovative ventures like the use of hot water springs for clean energy.

Other options:

- \* Escrowing shares: Typically used to restrict the sale of shares for a certain period, not for raising capital.
- \* Offering a greenshoe option: Applies to stabilizing stock prices in an IPO or follow-on offering, not raising initial capital.
- \* Filing disclosure documents with SEDAR+: Necessary for public companies but does not directly raise capital or increase exposure.

References:

- \* Volume 1, Chapter 12: Financing and Listing Securities, section on "Capital Raising Options" covers crowdfunding as a method for startups to raise funds.

### NEW QUESTION # 157

A shareholder receive rights from a company through direct ownership in shares. Not expecting to exercise them, she sells the right on the relevant exchange. What is her capital gain?

- **A. The sale price of the rights.**
- B. The current share price less the exercise price of the rights.
- C. The current price of the shares less the sale price of the rights.
- D. The sales price less the exercise price of the rights.

**Answer: A**

Explanation:

When a shareholder sells rights on the exchange, the proceeds of the sale represent the capital gain. Rights provide shareholders with the opportunity to purchase additional shares of a company at a discounted price. If a shareholder chooses not to exercise these rights and instead sells them on the secondary market, the value they receive from the sale constitutes their capital gain.

\* Rights Offering:

\* A rights offering allows existing shareholders to purchase additional shares at a set price (exercise price) within a specific period.

\* Shareholders can either exercise these rights or sell them on the market.

\* Capital Gain Calculation:

\* The capital gain from selling the rights equals the sale price. This is because the rights themselves were issued at no cost to the shareholder.

\* The exercise price is irrelevant to the calculation as the rights were not exercised.

\* Tax Implications:

\* The gain from the sale of rights is treated as a capital gain for tax purposes. Only 50% of the capital gain is taxable under Canadian taxation rules.

\* Since the shareholder did not exercise the rights but sold them, the capital gain is the sale price of the rights. Subtracting the exercise price or using the share price is unnecessary and incorrect for this scenario.

Key Concepts: Why Option A Is Correct: References from CSC Study Materials:

\* Volume 2, Chapter 24: "Canadian Taxation," Section on Capital Gains and Losses.

### NEW QUESTION # 158

What type of return is adjusted for inflation?

- A. Ex-post
- B. Ex-ante
- **C. Real**
- D. Nominal

**Answer: C**

Explanation:

The real rate of return refers to the return on an investment adjusted for the effects of inflation. Unlike nominal return, which reflects the raw return of an investment without considering inflation, the real return provides a clearer measure of an investment's actual purchasing power.

Formula for Real Rate of Return: The formula for calculating real rate of return is:

$$\text{Real Return} = \frac{\text{Nominal Return} - \text{Inflation Rate}}{1 + \text{Inflation Rate}}$$

For example, if an investment generates a nominal return of 5% and inflation during the period is 2%, the real

return would be 3% (5% - 2%).

- \* A. Ex-ante: Refers to a forecasted return, not necessarily adjusted for inflation.
- \* B. Nominal: Measures the raw return without accounting for inflation.
- \* C. Ex-post: Refers to a return based on historical data, which can be nominal or real.
- \* D. Real: The correct answer, as it specifically accounts for inflation to measure the actual growth in purchasing power.

:

CSC Volume 2, Chapter 15: Real Returns and the Effect of Inflation, which explains the difference between real and nominal rates of return and their application in investment analysis.

### NEW QUESTION # 159

Omar invests \$5,000 in a labour-sponsored venture capital corporation (LSVCC) in Ontario, his province of residence. What is the total LSVCC tax credit that Omar is eligible to receive from this investment?

- A. \$750
- B. \$875
- C. \$1,625
- D. \$1,500

**Answer: A**

### NEW QUESTION # 160

What do the returns on treasury bills often represent?

- A. Bank prime rate.
- B. Inflation rate
- C. Federal funds rate
- D. Risk-free rate

**Answer: D**

Explanation:

Detailed Explanation: Treasury bills (T-bills) are short-term government debt instruments with minimal risk of default. Their returns are often used as a proxy for the risk-free rate in financial analysis, as they represent the theoretical return on an investment with zero credit risk. The risk-free rate is critical for discounting cash flows and comparing returns on various investments.

Other options:

- \* A. Bank prime rate is the interest rate commercial banks charge their most creditworthy customers.
- \* B. Inflation rate is unrelated to the direct return on T-bills, though it impacts real returns.
- \* D. Federal funds rate applies in the U.S. to interbank lending, not directly to T-bills.
