

Latest 1Z0-106 Study Materials & Top 1Z0-106 Exam Dumps

DOWNLOAD the newest RealVCE 1Z0-106 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1DQWUA4-D8K-SMFefMXtE4bQHWPXYtZO6>

Another version of Oracle Linux 8 Advanced System Administration (1Z0-106) practice exams is also available at RealVCE and that is web-based. It has all specifications we have discussed above in the section of the Oracle 1Z0-106 desktop practice test software. But the only difference is that this web-based 1Z0-106 practice exam software works online and needs no software installation. Furthermore, this 1Z0-106 Practice Exam is supported by both Windows and iOS, Android, Mac, and Linux. Since it is the web-based 1Z0-106 practice exam, you can take it from Opera, Chrome, Safari, Firefox, or any other popular browser.

Oracle 1Z0-106 certification exam is designed for advanced system administrators who are looking to validate their expertise in Oracle Linux 8. 1Z0-106 exam covers a range of topics related to the installation, configuration, and management of Oracle Linux 8 systems in enterprise environments. Passing 1Z0-106 Exam is a great way for administrators to demonstrate their skills and knowledge to potential employers and clients.

100% Pass 1Z0-106 - High Hit-Rate Latest Oracle Linux 8 Advanced System Administration Study Materials

The pass rate is 99% for 1Z0-106 exam materials, and most candidates can pass the exam by using 1Z0-106 questions and answers of us. If you choose us, we can ensure you that you can pass the exam just one time. We will give you refund if you fail to pass the exam, you don't need to worry that your money will be wasted. We offer you free demo to have a try before buying 1Z0-106 Exam Dumps, so that you can have a better understanding of what will buy. We have online and offline chat service stuff, and if you have any questions about 1Z0-106 exam dumps, you can consult us.

Following is the info about the Passing Score, Duration & Questions for the Oracle 1Z0-106 Exam

- The passing score: 60%
- Number of Questions: 60 Questions
- Time Duration: 90 Minutes
- Languages: English

Oracle Linux 8 Advanced System Administration Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which command produces human-readable timestamps in kernel ring buffer messages?

- A. `dmesg -W`
- **B. `dmesg -T`**
- C. `dmesg -t`
- D. `dmesg -x`

Answer: B

Explanation:

* Option C (Correct): The `dmesg -T` command converts the timestamps in the kernel ring buffer messages to a human-readable format. The default `dmesg` output shows the timestamps in a raw format (seconds since the kernel started), while the `-T` option translates these timestamps into a human-readable date and time.

* Option A (Incorrect): The `-W` option is used to remove the timestamps entirely from the output.

* Option B (Incorrect): The `-x` option provides extended information about the message (e.g., facility, level).

* Option D (Incorrect): The `-W` option waits for new messages and does not convert timestamps to a human-readable format.

Oracle Linux Reference: Refer to:

* `man dmesg` for more details on `dmesg` options.

NEW QUESTION # 24

Examine this command and output:

```
# ausearch -k mkdir
```

```
type=SYSCALL msg=audit(1604360199.719:44733): arch=c000003e syscall=83 success=no a0=55dec0b47400 a1=lc0 a2=0
a3=0 items=2 ppid=1354 pid=284632 auid=4294967295 uid=996 gid=996 euid=998 suid=998 fsuid=998 egid=996 sgid=996
fsuid=996 tty=(none) ses=429 comm="pkla-check-auth" exe="/usr/bin/pkla-check-authorization" subj=system_u:
system_r:policykit_auth_t:s0 key="mkdir"
```

Which command displays the syscall in text format instead of numerical format?

- A. `ausearch -r -k mkdir`
- B. `ausearch -a 83 -k mkdir`
- **C. `ausearch -sc 83 -k mkdir`**
- D. `ausearch --format text -k mkdir`
- **E. `ausearch -l -k mkdir`**

Answer: C,E

Explanation:

* Option B (Correct): The `-l` or `--interpret` option in `ausearch` converts the numerical system call numbers into their corresponding text names, making the output easier to understand.

* Option C (Correct): The `-sc` option specifies the system call by name (`mkdir`), which helps in finding audit logs related to that particular system call in text format.

* Option A, D, E (Incorrect): These options do not specifically translate the numeric system call numbers into human-readable text. Option A filters by the numeric ID, `-D` is an invalid option, and `-E` reverses the search order but does not affect the format.

Oracle Linux Reference: Refer to:

* Oracle Linux 8: Auditing and System Logs

* `man ausearch` for more details on audit search and interpretation commands.

NEW QUESTION # 25

Which statement is true about slice units?

- A. A slice unit accepts multiple names by the creation of additional symlinks to the unit file.
- B. Processes in a slice unit are named at the same level as scopes and services.
- C. The system.slice contains all system services and user sessions.
- **D. A slice unit is a concept for hierarchically managing resources in a group of processes.**

Answer: D

NEW QUESTION # 26

Examine /etc/anacrontab:

SHELL=/bin/sh

PATH=/sbin:/bin:/usr/sbin:/usr/bin

MAILTO=root

the maximal random delay added to the base delay of the jobs

RANDOM_DELAY=45

the jobs are started during the following hours only

START_HOURS_RANGE=3-22

period in days delay in minutes job-identifier command

1 5 dailyjob nice run-parts /etc/cron.daily

7 25 weeklyjob nice run-parts /etc/cron.weekly

@monthly 45 monthlyjob nice run-parts /etc/cron.monthly

Which two statements are true about the jobs scheduled in this file?

- A. Scripts run by the first job are delayed between 11 and 45 minutes.
- B. Scripts run by the second job are delayed between 31 and 70 minutes.
- **C. Scripts run by the third job are delayed between 45 and 90 minutes.**
- **D. Jobs defined in this anacrontab file can be executed between 15:00 and 22:00**
- E. Jobs defined in this anacrontab file are randomly delayed by up to 51 minutes.

Answer: C,D

NEW QUESTION # 27

Examine this segment of /etc/rsyslog.conf:

Log all kernel messages to the console.

Logging much else clutters up the screen.

#kern.* /dev/console

Log anything (except mail) of level info or higher.

Don't log private authentication messages!

*.info;mail.none;authpriv.none;cron.none /var/log/messages

The authpriv file has restricted access.

authpriv.* /var/log/secure

Log all the mail messages in one place.

mail.* -/var/log/maillog

Log cron stuff

cron.* /var/log/cron

Everybody gets emergency messages

.emerg :omusrmsg:

Now examine this log output:

less

Nov 9 20:32:16 server02 sudo[4570]: pam_unix(sudo:session): session opened for user opc (uid=0) Nov 9 20:32:17 server02

sudo[4570]: pam_unix(sudo:session): session closed Nov 9 20:32:24 server02 unix_chkpwd[4661]: password check failed for user

Nov 9 20:32:24 server02 su[4581]: pam_unix(su:auth): authentication failed; logname= uid=1000 euid=0 tty=pts/0 ruser=opc

rhost= user=root Which setting enabled the reporting of this log file output?

- A. *.emerg *
- B. cron.* /var/log/cron
- C. #kern.* /dev/sssd/sssd.log

- D. authpriv.* /var/log/auth
- E. *.info;mail.none;authpriv.none;cron.none /var/log/messages

Answer: D

Explanation:

* Option A (Correct): The configuration line `authpriv.* /var/log/auth` would direct all messages of the `authpriv` facility (which includes sensitive authentication messages) to the `/var/log/auth` file. The log entries provided, which include authentication-related messages from PAM (`pam_unix`), would be logged due to this setting.

* Option B (Incorrect): The `*.emerg` setting logs emergency messages to all users, not specifically the provided log output.

* **Option C (Incorrect):** This setting logs various non-authentication-related messages to `/var/log/messages`. It specifically excludes `authpriv`.

* Option D (Incorrect): This setting appears to be commented out and incorrect for the logging behavior described.

* Option E (Incorrect): The cron.* setting logs cron messages, unrelated to the provided authentication logs.

Oracle Linux Reference:Refer to:

* OracleLinux 8: System Logging with rsyslog
