300-740 practice test can be your optimum selection and useful tool to deal with the urgent challenge. With over a decade's striving, our 300-740 training materials have become the most widely-lauded and much-anticipated products in industry. We will look to build up R&D capacity by modernizing innovation mechanisms and fostering a strong pool of professionals. Therefore, rest assured of full technical support from our professional elites in planning and designing 300-740 Practice Test.

Cisco 300-740 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Application and Data Security This section of the exam measures skills of Cloud Security Analysts and explores how to defend applications and data from cyber threats. It introduces the MITRE ATT&CK framework, explains cloud attack patterns, and discusses mitigation strategies. Additionally, it covers web application firewall functions, lateral movement prevention, microsegmentation, and creating policies for secure application connectivity in multicloud environments.
Topic 2	<ul style="list-style-type: none">Visibility and Assurance: This section of the exam measures skills of Security Operations Center (SOC) Analysts and focuses on monitoring, diagnostics, and compliance. It explains the Cisco XDR solution, discusses visibility automation, and describes tools for traffic analysis and log management. The section also involves diagnosing application access issues, validating telemetry for behavior analysis, and verifying user access with tools like firewall logs, Duo, and Cisco Secure Workload.
Topic 3	<ul style="list-style-type: none">Integrated Architecture Use Cases: This section of the exam measures the skills of Cloud Solution Architects and covers key capabilities within an integrated cloud security architecture. It focuses on ensuring common identity across platforms, setting multicloud policies, integrating secure access service edge (SASE), and implementing zero-trust network access models for more resilient cloud environments.

Topic 4	<ul style="list-style-type: none"> • Industry Security Frameworks: This section of the exam measures the skills of Cybersecurity Governance Professionals and introduces major industry frameworks such as NIST, CISA, and DISA. These frameworks guide best practices and compliance in designing secure systems and managing cloud environments responsibly.
Topic 5	<ul style="list-style-type: none"> • SAFE Architectural Framework: This section of the exam measures skills of Security Architects and explains the Cisco SAFE framework, a structured model for building secure networks. It emphasizes the importance of aligning business goals with architectural decisions to enhance protection across the enterprise.

Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q162-Q167):

NEW QUESTION # 162

Refer to the exhibit. A security engineer deployed Cisco Secure XDR, and during testing, the log entry shows a security incident. Which action must the engineer take first?

- A. Rebuild the endpoint.
- **B. Isolate the endpoint.**
- C. Uninstall the malware.
- D. Block IP address 10.77.17.45.

Answer: B

Explanation:

The SCAZT documentation emphasizes that when Cisco Secure XDR identifies a high-risk threat (e.g., risk score 8 out of 10 for malware distribution, as shown in the exhibit), the first priority is to prevent lateral movement and data exfiltration. The recommended first response action is to isolate the affected endpoint from the network.

Cisco Secure Endpoint and XDR allow you to trigger an "isolate" response directly from the dashboard, cutting off all non-management communication from the compromised device. This preserves the environment and enables forensic analysis before removing malware or taking destructive actions like rebuilding the system.

NEW QUESTION # 163

The SAFE architectural framework is designed to:

- A. Only secure on-premises environments
- B. Address only cloud security concerns
- **C. Provide guidelines for comprehensive security across different network environments**
- D. Focus solely on physical security measures

Answer: C

NEW QUESTION # 164

What is associated with implementing Cisco zero-trust architecture?

- A. It provides the same security as the VPN technology.
- B. It assumes that all network traffic is trustworthy.
- C. It focuses on perimeter-based security.
- **D. It verifies trust before granting access to resources.**

Answer: D

Explanation:

Zero Trust is based on the concept of "never trust, always verify." It ensures that no user or device is inherently trusted, even if they are inside the corporate network. Cisco's Zero Trust Architecture implements continuous trust verification for every access request, using identity, device posture, and behavior analysis.

SCAZT Section 1 (Cloud Security Architecture, Pages 13-17) describes how Cisco's Zero Trust model authenticates and authorizes access before permitting resource interaction.

NEW QUESTION # 165

Drag and drop the tasks from the left into order on the right to implement adding Duo multifactor authentication to Meraki Client VPN login.

Answer:

Explanation:

NEW QUESTION # 166

The use of a reverse proxy in cloud security is important for:

- A. Directly exposing application servers to the internet
- B. Only logging HTTP/HTTPS traffic
- C. Simplifying the network by removing the need for firewalls
- **D. Providing an additional layer of abstraction and control to ensure the security of backend servers**

Answer: D

NEW QUESTION # 167
