Databricks Databricks-Certified-Data-Analyst-Associate최고패스자료 - Databricks-Certified-Data-Analyst-Associate유효한 공부자료

Databricks Databricks-Certified-Data-Analyst-Associate덤프의 유효성을 보장해드릴수 있도록 저희 기술팀은 오랜시간 동안Databricks Databricks-Certified-Data-Analyst-Associate시험에 대하여 분석하고 연구해 왔습니다. Databricks Databricks-Certified-Data-Analyst-Associate 덤프를 한번 믿고Databricks Databricks-Certified-Data-Analyst-Associate시험에 두려움없이 맞서보세요. 만족할수 있는 좋은 성적을 얻게 될것입니다.

최신 Data Analyst Databricks-Certified-Data-Analyst-Associate 무료샘플문 제 (Q29-Q34):

질문 # 29

Which of the following describes how Databricks SQL should be used in relation to other business intelligence (BI) tools like Tableau, Power BI, and looker?

- A. As a complementary tool for professional-grade presentations
- B. As a substitute with less functionality
- C. As a complete replacement with additional functionality
- **D. As a complementary tool for quick in-platform BI work**
- E. As an exact substitute with the same level of functionality

정답: D

설명:

Databricks SQL is not meant to replace or substitute other BI tools, but rather to complement them by providing a fast and easy way to query, explore, and visualize data on the lakehouse using the built-in SQL editor, visualizations, and dashboards. Databricks

SQL also integrates seamlessly with popular BI tools like Tableau, Power BI, and Looker, allowing analysts to use their preferred tools to access data through Databricks clusters and SQL warehouses. Databricks SQL offers low-code and no-code experiences, as well as optimized connectors and serverless compute, to enhance the productivity and performance of BI workloads on the lakehouse. Reference: Databricks SQL, Connecting Applications and BI Tools to Databricks SQL, Databricks integrations overview, Databricks SQL: Delivering a Production SQL Development Experience on the Lakehouse

질문 # 30

A data analyst wants to create a dashboard with three main sections: Development, Testing, and Production. They want all three sections on the same dashboard, but they want to clearly designate the sections using text on the dashboard.

Which of the following tools can the data analyst use to designate the Development, Testing, and Production sections using text?

- A. Separate queries for each section
- B. Direct text written into the dashboard in editing mode
- C. Separate endpoints for each section
- D. Separate color palettes for each section
- E. **Markdown-based text boxes**

정답: E

설명:

Markdown-based text boxes are useful as labels on a dashboard. They allow the data analyst to add text to a dashboard using the %md magic command in a notebook cell and then select the dashboard icon in the cell actions menu. The text can be formatted using markdown syntax and can include headings, lists, links, images, and more. The text boxes can be resized and moved around on the dashboard using the float layout option. Reference: Dashboards in notebooks, How to add text to a dashboard in Databricks

질문 # 31

A data analyst has created a Query in Databricks SQL, and now wants to create two data visualizations from that Query and add both of those data visualizations to the same Databricks SQL Dashboard.

Which step will the data analyst need to take when creating and adding both data visualizations to the Databricks SQL Dashboard?

- A. Copy the Query and create one data visualization per query.
- B. Decide on a single data visualization to add to the dashboard.
- C. Alter the Query to return two separate sets of results.
- D. **Add two separate visualizations to the dashboard based on the same Query.**

정답: D

질문 # 32

Which of the following should data analysts consider when working with personally identifiable information (PII) data?

- A. Legal requirements for the area in which the analysis is being performed
- B. **All of these considerations**
- C. Organization-specific best practices for PII data
- D. Legal requirements for the area in which the data was collected
- E. None of these considerations

정답: B

설명:

Data analysts should consider all of these factors when working with PII data, as they may affect the data security, privacy, compliance, and quality. PII data is any information that can be used to identify a specific individual, such as name, address, phone number, email, social security number, etc. PII data may be subject to different legal and ethical obligations depending on the context and location of the data collection and analysis. For example, some countries or regions may have stricter data protection laws than others, such as the General Data Protection Regulation (GDPR) in the European Union. Data analysts should also follow the organization-specific best practices for PII data, such as encryption, anonymization, masking, access control, auditing, etc. These best practices can help prevent data breaches, unauthorized access, misuse, or loss of PII data. Reference:

How to Use Databricks to Encrypt and Protect PII Data

Automating Sensitive Data (PII/PHI) Detection

질문 # 33

A data analyst has set up a SQL query to run every four hours on a SQL endpoint, but the SQL endpoint is taking too long to start up with each run.

Which of the following changes can the data analyst make to reduce the start-up time for the endpoint while managing costs?

- A. Increase the minimum scaling value
- B. Reduce the SQL endpoint cluster size
- C. Use a Serverless SQL endpoint
- D. Turn off the Auto stop feature
- E. Increase the SQL endpoint cluster size

정답: C

설명:

A Serverless SQL endpoint is a type of SQL endpoint that does not require a dedicated cluster to run queries. Instead, it uses a shared pool of resources that can scale up and down automatically based on the demand. This means that a Serverless SQL endpoint can start up much faster than a SQL endpoint that uses a cluster, and it can also save costs by only paying for the resources that are used. A Serverless SQL endpoint is suitable for ad-hoc queries and exploratory analysis, but it may not offer the same level of performance and isolation as a SQL endpoint that uses a cluster. Therefore, a data analyst should consider the trade-offs between speed, cost, and quality when choosing between a Serverless SQL endpoint and a SQL endpoint that uses a cluster. Reference: Databricks SQL endpoints, Serverless SQL endpoints, SQL endpoint clusters

질문 # 34
