## **Pass Guaranteed Quiz Valid Salesforce - AP-202 - New B2B Commerce for Developers Accredited Professional Dumps Files**

We will be happy to assist you with any questions regarding our products. Our B2B Commerce for Developers Accredited Professional (AP-202) practice exam software helps to prepare applicants to practice time management, problem-solving, and all other tasks on the standardized exam and lets them check their scores. The Salesforce AP-202 Practice Test results help students to evaluate their performance and determine their readiness without difficulty.

## **Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q56-Q61):**

### **NEW QUESTION # 56**

What target does a developer need to set in the js-meta.xml file when creating a custom LWC component for use in the Checkout Flow?

- **A. lwc\_\_FlowComponent**
- B. lightning\_\_CheckoutFlow
- C. lightning\_\_FlowScreen
- D. lwc\_\_flow

**Answer: A**

Explanation:

When creating a custom Lightning Web Component (LWC) for use in the Checkout Flow, a developer must set the target in the js-meta.xml file to lwc\_\_FlowComponent. This target specifies that the LWC is intended for use within the flow component framework, allowing it to be utilized specifically in the context of Salesforce Flows, including those used in the checkout process. Salesforce documentation on developing custom LWCs for various targets would detail this requirement, ensuring that developers understand how to correctly package and deploy their components for the intended use case.

#### NEW QUESTION # 57

Northern Trail Outfitters (NTO) has a requirement to schedule a reusable data import across multiple orgs for customer demo purposes. NTO also has a requirement to seed data of related objects-ProductCatalog, ProductCategory, Product2, and ProductCategoryProduct- while preserving its relationships and without purchasing additional licenses or using thirdparty tools. What is the recommended tool a developer should select to address the requirement?

- **A. Commerce Product Data Import**
- B. Dataloader.io
- C. Bulk Import Using Command Line Interface
- D. Data Import Wizard

**Answer: A**

Explanation:

The Commerce Product Data Import resource is the recommended tool for importing products for a B2B or B2C store using a .csv file. This resource supports importing data of related objects, such as ProductCatalog, ProductCategory, Product2, and ProductCategoryProduct, while preserving their relationships. It also does not require additional licenses or third-party tools. The other options are either not specific to Commerce products, or do not support importing data of related objects. Reference: Commerce Product Import Resource, Import and Export Commerce Data, B2B and D2C Commerce Data Model

#### NEW QUESTION # 58

Universal Containers (UC) needs to display data from standard objects (entities) in a different format than what comes with B2B Commerce out of the box. In doing this, what is one advantage of using the Lightning Data Service vs using a custom Controller class?

- A. There is a Visual Studio add-in that accelerates the layout process
- B. Lightning Data Service translates the developer's component implementation to a VisualForce page for backward compatibility.
- **C. The developer can read, create, or modify single records or metadata without writing Apex code.**
- D. JavaScript proxies for transport objects are created in the developer's IDE automatically.

**Answer: C**

Explanation:

Lightning Data Service (LDS) is a Salesforce UI API layer that empowers developers to perform CRUD operations and manage Salesforce data without the need for custom Apex controllers. LDS is designed to improve performance, user interface consistency, and developer productivity by handling data operations and sharing rules, thus reducing the need for server-side code. For more details, refer to the Salesforce documentation on Lightning Data Service: Salesforce Lightning Data Service Documentation.

#### NEW QUESTION # 59

A developer is building a custom component in Lightning web components (LWC) that has a grandchild component that needs to pass information to the grandparent component. What is the correct way to demonstrate the passing of a message from the

grandchild component to the grandparent component?

```
    });  
    // grandParent.js  
    handleMessage(event) {  
    console.log(event.detail.message); // 'Hello from Grandchild'  
    }  
  
    Directly calling a method on the grandparent component from the grandchild component  
    // grandChild.js  
    this.template.querySelector('c-grand-parent').handleMessage('Hello from Grandchild');
```

- A.
- B.

```
    // grandParent.js  
    handleMessage(message) {  
    console.log(message); // 'Hello from Grandchild'  
    }  
  
    Using a third-party library to establish communication between the grandchild and grandparent  
    components  
    // grandChild.js  
    PubSub.publish('message', 'Hello from Grandchild');  
    // grandParent.js  
    connectedCallback() {
```

- C.

Using an attribute on the child component to pass the message from the child to the grandparent

```
    // child.js  
    this.message = 'Hello from Child';  
    // child.html  
    <template>  
    <c-grand-parent message={message}></c-grand-parent>  
    </template>  
    // grandParent.js  
    @api message;  
  
    Using an event that the grandchild component starts and the grandparent component handles  
    // grandChild.js  
    this.dispatchEvent(new CustomEvent('message', {  
    bubbles: true,  
    detail: { message: 'Hello from Grandchild' }
```

```
    this.subscription = PubSub.subscribe('message', (message) => {  
    console.log(message); // 'Hello from Grandchild'  
    });
```

- D.

Answer: A

Explanation:

The correct way to demonstrate the passing of a message from the grandchild component to the grandparent component in LWC is to use the PubSub library. The PubSub library is a utility that enables Lightning web components to communicate across the DOM tree without using intermediaries. The grandchild component can publish a message to a channel, and the grandparent component can subscribe to that channel and receive the message. This way, the communication is decoupled and does not depend on the component hierarchy. Option B shows the correct syntax for using the PubSub library to pass a message from the grandchild component to the grandparent component. Option A is incorrect because it uses `th@apiDecorator` to expose a property on the grandchild component, which is not a valid way to communicate with the grandparent component. Option C is incorrect because it uses the `@wireDecorator` to wire a property on the grandchild component to a function on the grandparent component, which is also not a valid way to communicate with the grandparent component. Option D is incorrect because it uses the `@trackDecorator` to track a property on the grandchild component, which is not a valid way to communicate with the grandparent component. Communicate Across the DOM | Lightning Web Components Developer Guide, Child to grandparent communication in LWC, PubSub Library for Lightning Web Components

### NEW QUESTION # 60

A dev at Northern Trail Outfitters (NTO) exported Order Summary records via Data Loader, but noticed that some orders were missing. What is the most likely cause?

- A. Original Order information was missing
- B. Order Life Cycle Type was Managed
- C. Billing Contact was missing
- **D. Status was not in Created**
- E. Currency mapping was not done correctly

**Answer: D**

Explanation:

When exporting Order Summary records via Data Loader, if some orders are missing, a common cause could be that those orders did not have a status that was included in the export criteria, such as 'Created'. Salesforce data exports can be filtered based on specific criteria, and if the status of some orders doesn't match the criteria, those orders will not be included in the export. The other options listed are less likely to be direct causes for missing orders in an export operation. For more information on using Data Loader and understanding export criteria, refer to the Salesforce Data Loader Guide: Salesforce Data Loader Guide.

### NEW QUESTION # 61

.....

Perhaps you still feel confused about our B2B Commerce for Developers Accredited Professional test questions when you browse our webpage. There must be many details about our products you would like to know. Do not hesitate and send us an email. Gradually, the report will be better as you spend more time on our AP-202 exam questions. As you can see, our system is so powerful and intelligent. What most important it that all knowledge has been simplified by our experts to meet all people's demands. So the understanding of the AP-202 Test Guide is very easy for you. Our products know you better.
