# Latest 100-160 Questions & 100-160 Interactive Practice Exam

2025 Latest Real4Prep 100-160 PDF Dumps and 100-160 Exam Engine Free Share: https://drive.google.com/open?id=16HPs6Mm3FOzLoY-DSgwEYhFLqveq7nc_

The Real4Prep is one of the top-rated and leading platforms that have been offering a simple, smart, and easiest way to pass the challenging 100-160 exam with good scores. The Cisco 100-160 Exam Questions are real, valid, and updated. These 100-160 exam practice questions are designed and verified by experienced and qualified 100-160 exam experts.

Cisco 100-160 Exam Syllabus Topics:

Topic	Details
Topic 1	• Essential Security Principles: This section of the exam measures the skills of a Cybersecurity Technician and covers foundational cybersecurity concepts such as the CIA triad (confidentiality, integrity, availability), along with basic threat types and vulnerabilities, laying the conceptual groundwork for understanding how to protect information systems.
Topic 2	• Vulnerability Assessment and Risk Management: This section of the exam measures the skills of a Risk Management Analyst and entails identifying and assessing vulnerabilities, understanding risk priorities, and applying mitigation strategies that help manage threats proactively within an organization's systems
Topic 3	• Incident Handling: This section of the exam measures the skills of an Incident Responder and centers on recognizing security incidents, responding appropriately, and containing threats—forming the essential foundation of incident response procedures.
Topic 4	• Endpoint Security Concepts:This section of the exam measures the skills of an Endpoint Security Specialist and includes securing individual devices, understanding protections such as antivirus, patching, and access control at the endpoint level, essential for maintaining device integrity.
Topic 5	• Basic Network Security Concepts: This section of the exam measures the skills of a Network Defender and focuses on understanding network-level protections, including firewalls, VPNs, and intrusion detection • prevention systems, providing insight into how threats are mitigated within network environments.

100-160 Interactive Practice Exam & 100-160 Free Learning Cram

Our products are compiled by experts from various industries and they are based on the true problems of the past years and the

development trend of the industry. What's more, according to the development of the time, we will send the updated materials of 100-160 test prep to the customers soon if we update the products. Under the guidance of our study materials, you can gain unexpected knowledge. Finally, you will pass the exam and get a 100-160 Certification. Customers can learn according to their actual situation and it is flexible. Next I will introduce the advantages of our 100-160 test prep so that you can enjoy our products.

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q16-Q21):

NEW QUESTION # 16
Which logging mechanism is used in Linux and Unix-based systems to store system and application logs?

- A. Event Viewer
- B. Audit logs
- C. System and application logs
- D. Syslog

Answer: D

Explanation:
Syslog is a standard logging protocol that is commonly used in Linux and Unix-based systems to store and forward system and application logs. It allows administrators to collect logs from multiple devices and applications and store them in a centralized location for analysis, troubleshooting, and compliance purposes.

NEW QUESTION # 17
What are botnets?

- A. A software program that is designed to damage, disrupt, or gain unauthorized access to a computer system.
- B. An attack that manipulates individuals into revealing sensitive information or performing certain actions.
- C. A form of cyber attack that attempts to gain unauthorized access to a network.
- D. A network of compromised computers controlled by a central entity to carry out malicious activities.

Answer: D

Explanation:
Botnets are networks of compromised computers that are controlled by a central entity, often referred to as a botmaster. These compromised computers, also known as bots or zombies, are typically infected with malware and can be used to carry out various malicious activities, such as launching DDoS attacks, sending spam emails, or stealing sensitive information.

NEW QUESTION # 18
Which of the following best describes the purpose of the MITRE ATT&CK; Matrix?

- A. To map vulnerabilities and exposures in computer systems
- B. To analyze the impact of cyber threats on critical infrastructure
- C. To track the global distribution of cyber threat actors
- D. To provide a standardized way to categorize cyber threat tactics and techniques

Answer: D

Explanation:
The MITRE ATT&CK; Matrix provides a comprehensive framework that categorizes various tactics, techniques, and procedures (TTPs) used by cyber threat actors. It enables organizations to understand how different attackers operate and helps in developing effective cybersecurity defenses and detection mechanisms.

NEW QUESTION # 19
Which of the following log file entries is typically associated with a Distributed Denial of Service (DDoS) attack?

- A. "Web server responding slowly to client requests at 14:10:15."

- B. "Unusual number of concurrent sessions established at 09:30:00."
- C. "High CPU utilization on server at 15:20:05."
- D. "Spike in network traffic volume at 12:45:10."

Answer: D

Explanation:
In a Distributed Denial of Service (DDoS) attack, the attacker overwhelms the target system or network with a massive volume of traffic from multiple sources. This excessive traffic causes the targeted system to become inaccessible to legitimate users. Therefore, a sudden and significant spike in network traffic volume is a typical indicator of a DDoS attack. Additionally, other log entries may also be present, such as increased resource utilization or slow response times, as mentioned in the other options, but the spike in network traffic volume is the most indicative of a DDoS attack.

NEW QUESTION # 20
Which of the following features of the Cisco Identity Services Engine (ISE) allows network administrators to define policies for controlling access to network resources based on user identities and user or group attributes?

- A. TrustSec
- B. Profiling
- C. Network Access Profiles
- D. Identity Firewall

Answer: B

Explanation:
Option 1: Network Access Profiles: Network Access Profiles in Cisco ISE define the behavior of network devices when they are accessed by authenticated users. They are a set of policies that determine how network resources are allocated to users or user groups, and what level of access they have.
Option 2: Identity Firewall: Cisco ISE's Identity Firewall feature enables network administrators to apply firewall policies based on user identities. It allows for granular control over network access and can enforce allow, deny, or redirect actions based on user attributes.
Option 3: Profiling: This is the correct answer. Cisco ISE's Profiling feature is used to dynamically classify endpoints connecting to the network based on their characteristics, such as their MAC addresses, IP addresses, and DHCP options. This information is then used to enforce access policies.
Option 4: TrustSe TrustSec is a Cisco security solution that provides secure access control across the network infrastructure. While TrustSec is related to identity and access management, it is not a feature of Cisco ISE specifically.

NEW QUESTION # 21
......

Mock tests are outstandingly worked for you to make heads or tails of your goofs while giving 100-160 Exam. Cisco 100-160 gives practice material that is as per the legitimate Cisco 100-160 exam. A free demo is other than open to test the parts prior to buying the entire thing for the 100-160 Exam. You can pass Cisco 100-160 certification on the off chance that you use Cisco 100-160 Dumps material.
