Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36
Which platform is supported by Portworx for deployment?

- A. DCOS
- B. AWS
- C. Docker Swarm

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Portworx primarily supports deployment on Kubernetes and is well-integrated with major cloud platforms including Amazon Web Services (AWS). AWS offers native infrastructure and storage services that complement Portworx's capabilities for cloud-native storage, including integration with Elastic Block Store (EBS) and S3 Object Storage. While Portworx historically supported container orchestrators like Docker Swarm and Mesosphere DC/OS (DCOS), the primary and recommended platform for production deployments today is Kubernetes on cloud providers such as AWS, Azure, and Google Cloud. AWS's ecosystem allows Portworx to leverage scalable compute and storage infrastructure, advanced networking, and cloud security features, making it a preferred platform. Portworx official platform support documentation lists AWS as a key supported environment for its container storage solutions【Pure Storage Portworx Platform Support Guide source】.

NEW QUESTION # 37
Which CRD object can be used to restore an existing ApplicationBackup?

- A. Migration
- B. ApplicationRestore
- C. VolumeSnapshot

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The ApplicationRestore Custom Resource Definition (CRD) object in Portworx is specifically designed to restore an application from an existing ApplicationBackup. This object orchestrates the process of recovering a consistent snapshot of an application, including all its associated volumes, in Kubernetes environments. Using ApplicationRestore, administrators can define the source backup, restore location, and any necessary transformations during restoration. This facilitates disaster recovery, migration, or rollback scenarios for complex stateful applications. The Portworx backup and restore documentation clearly defines ApplicationRestore as the controller responsible for application-level recovery operations, ensuring data integrity and consistency throughout the restore workflow【Pure Storage Portworx Backup and Restore Guide source】.

NEW QUESTION # 38
A cluster administrator wants to define an Autopilot rule for Portworx.
What are the 4 main parts of an Autopilot rule?

- A. Selector, Namespace Selector, Conditions and Actions
- B. Replica, I/O profile, Secure, Placement Strategy
- C. Enforcement, Match Expressions, Topology Key and Weight

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
An Autopilot rule in Portworx consists of four main parts: Selector, Namespace Selector, Conditions, and Actions. The Selector defines the set of volumes or pods the rule applies to, often using labels. Namespace Selector further narrows the scope to specific Kubernetes namespaces, allowing targeted policy application. Conditions specify triggers or thresholds such as capacity utilization, I/O metrics, or time-based schedules. When conditions are met, the Actions section defines automated responses such as volume expansion, migration, or alerting. This modular rule design enables flexible, policy-driven automation for storage management, helping maintain cluster health and performance without manual intervention. The Portworx Autopilot documentation provides detailed schema and examples, emphasizing these components as foundational for dynamic, autonomous cluster operation【Pure Storage Portworx Autopilot Guide source】.

NEW QUESTION # 39
What are the three severity levels for Portworx alerts?

- A. INFO, WARNING, CRITICAL
- B. INFO, WARNING, ALARM
- C. INFO, WARNING, ERROR

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Portworx classifies alerts into three main severity levels to help administrators prioritize response actions. These levels are INFO, WARNING, and CRITICAL. INFO alerts provide informational messages about non-critical events, such as configuration changes or normal operational milestones. WARNING alerts indicate potential issues that could impact performance or availability if left unaddressed, such as increased latency or approaching capacity limits. CRITICAL alerts signal severe problems requiring immediate attention, such as node failures or data corruption risks. This severity categorization supports effective alert management and escalation policies, allowing operational teams to focus on high-impact issues first. The Portworx observability and alerting guide explains these levels in detail and recommends integrating alerts with external monitoring systems for centralized management【Pure Storage Portworx Alerting Guide source】.

NEW QUESTION # 40
What is a benefit of using Autopilot in Portworx environments?

- A. It facilitates the migration of containers across clusters.
- B. Provides enhanced security features for data protection.
- C. It automates the expansion of storage volumes based on predefined rules.

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Autopilot is a key feature in Portworx designed to automate operational tasks such as capacity management and volume resizing. One of its primary benefits is automating the expansion of storage volumes based on predefined rules and thresholds. This means that when a volume approaches its storage limit, Autopilot can automatically trigger volume expansion without manual intervention, ensuring applications have uninterrupted access to storage resources. This automation reduces operational overhead, eliminates manual errors, and helps maintain application performance and availability. While Autopilot doesn't directly handle container migration or security enhancements, its dynamic volume management capabilities play a critical role in operational efficiency and business continuity. The Portworx documentation highlights Autopilot as a tool for intelligent, policy-driven storage management that adapts to workload demands in real time【Pure Storage Portworx Autopilot Guide source】.
