Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q148-Q153):

NEW QUESTION # 148

Universal Containers (UC) had been using change sets for deploying all of the modifications to its Sales Cloud apps. After multiple business units joined the single Salesforce instance, there is a need to evaluate which development model is the most suitable for UC. The IT management has shown a particular interest in finding out more about the package development model.

As an architect, which two statements can be made to articulate the differences between the change set model and package development model?

Choose 2 answers

- A. In package development, the best practice is to consider the dependencies and build the dependencies into the package so it can be deployed in any other target orgs.
- B. A change set can be retrieved from the developer's workbench as a package, then pushed into the version control system to achieve the versioning control.
- **C. In change set development, the source of truth is a combination of the metadata already in the environment and the content of your change Set.**
- **D. In package development, the source of truth is the metadata in the package project, which makes it easy to integrate to a version control system.**

Answer: C,D

NEW QUESTION # 149

Universal Containers is having trouble aligning releases between major, minor, and Salesforce seasonal releases. What should an architect recommend?

- A. Share the test plans between the teams on each release type.
- **B. Create a release calendar, train and align all the teams.**
- C. Create a spreadsheet of metadata changes and reconcile the overlaps.
- D. Gate all release decisions at the center of excellence.

Answer: B

NEW QUESTION # 150

When replacing an old legacy system with Salesforce, which two strategies should the plan consider to mitigate the risks associated with migrating data from the legacy system to Salesforce? Choose 2 answers?

- A. Use a full sandbox environment and perform test runs of data migration scripts/processes with real data from the legacy system
- B. Use a full sandbox environment for all the systems involved, a full deployment plan with test data generation scripts, and full testing including integrations.
- C. Migrate users in phases based on their functions, requiring parallel use of legacy system and Salesforce for certain period of time.
- D. Identify the data relevant to the new system, including dependencies, and develop a plan/scripts for verification of data integrity.

Answer: A,D

Explanation:

Explanation

Identifying the relevant data and verifying the data integrity can help ensure the quality and accuracy of the migrated data. Using a full sandbox and performing test runs with real data can help validate the migration process and identify any issues or risks.

NEW QUESTION # 151

Universal Containers is a Salesforce AppExchange partner and they are planning to launch recommended that they use a partner development org for development. New app. The technical architect What are the three benefits of using a partner development org over an individual development org in this scenario?

Choose 3 answers

- A. Partner development org offers higher API limit.
- B. Partner development org never expires.
- C. Partner development org has a greater number of licenses available for the team.
- D. Only partner development org supports managed beta testing.
- E. Partner development org offers more storage.

Answer: A,C,E

NEW QUESTION # 152

Universal Containers (UC) is implementing Salesforce for the first time. Their legacy CRM system is an on premise home-grown application written in Java. UC plans to implement a continuous integration process that mirrors their current standard. Under what conditions should an Architect recommend against continuous integration?

- A. The client does not have budget for additional software
- B. There isn't a full sandbox available to leverage
- C. The Salesforce instance has only standard functionality
- D. Test scripts will be generated as part of the testing phase

Answer: C
