Pass Guaranteed Salesforce - Mule-101 - Accurate Salesforce Certified MuleSoft Integration Foundations Lab Questions

With all this reputation, our company still take customers first, the reason we become successful lies on the professional expert team we possess , who engage themselves in the research and development of our Mule-101 learning guide for many years. So we can guarantee that our Mule-101 exam materials are the best reviewing material. As for candidates who possessed with a Mule-101 professional certification are more competitive. The current word is a stage of science and technology, social media and social networking has already become a popular means of Mule-101 exam materials. As a result, more and more people study or prepare for exam through social networking. By this way, our Mule-101 learning guide can be your best learn partner.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q37-Q42):

NEW QUESTION # 37
Which component of Anypoint Platform belongs to the platform control plane?

- A. Anypoint Connectors
- B. Runtime Replica
- C. API Manager
- D. Runtime Fabric

Answer: C

Explanation:
Control Plane vs. Runtime Plane:
Control Plane: The set of components that manage, monitor, and design APIs and applications. This includes API Manager, Runtime Manager (the console), Anypoint Exchange, and Design Center3.

Runtime Plane: The infrastructure where the applications actually run (execute). This includes the Mule Runtime engine, Runtime Fabric, and CloudHub workers.
API Manager: It sits in the Control Plane and pushes policies (governance) down to the runtime engines (gateways).

NEW QUESTION # 38
According to MuleSoft's recommended REST conventions, which HTTP method should an API use to specify how API clients can request data from a specified resource?

- A. POST
- B. PUT
- C. GET
- D. PATCH

Answer: C

Explanation:
HTTP GET: The GET method is used to retrieve (read) a representation of a resource4. It is safe and idempotent, meaning it does not alter the state of the server.
Usage: If you want to "request data" (e.g., Get Customer Details), GET is the standard method.
Why others are incorrect:
POST: Used to create a new resource.
PUT: Used to replace (update) an entire resource.
PATCH: Used to partially update a resource.

NEW QUESTION # 39
Which role is primarily responsible for building API implementations as part of a typical MuleSoft integration project?

- A. Operations
- B. API Developer
- C. Integration Architect
- D. API Designer

Answer: B

Explanation:
API Developer: This role is responsible for the actual coding and implementation of the API. They use Anypoint Studio to build the Mule flows, configure connectors, write DataWeave transformations, and ensure the API functions according to the design specification1.
Why others are incorrect:
API Designer: Responsible for writing the RAML/OAS contract (specification) in Design Center, usually before implementation begins2.
Integration Architect: Responsible for high-level design, pattern selection, and governance, not the day-to-day coding of flows3.
Operations: Responsible for deployment, monitoring, and maintenance after the application is built4.

NEW QUESTION # 40
An IT integration team followed an API-led connectivity approach to implement an order-fulfillment business process. It created an order processing API that coordinates stateful interactions with a variety of microservices that validate, create, and fulfill new product orders.

- A. Streaming
- B. Orchestration
- C. Multicasting
- D. Aggregation

Answer: B

Explanation:
Orchestration: This refers to the logic where a central controller (the Process API) manages the interactions between multiple

systems to achieve a business goal.

The Scenario: The API is "coordinating stateful interactions" (e.g., Step 1: Validate Customer -> Step 2: Check Inventory -> Step 3: Debit Payment -> Step 4: Create Shipment). This strictly sequential or logic-driven coordination is the definition of Orchestration.

Why others are incorrect:

Aggregation: Specifically refers to just gathering data from multiple sources (Scatter-Gather) and combining the results, usually without complex state management or sequential logic.

Streaming: Refers to processing data in continuous chunks, not the logic of coordinating services.

NEW QUESTION # 41

Which type of communication is managed by a service mesh in a microservices architecture?

- A. Communication between microservices runtime administrators
- B. Communication between microservices
- C. Communication between microservices developers
- D. Communication between trading partner services

Answer: B

Explanation:

Service Mesh Definition: A service mesh is a dedicated infrastructure layer for handling service-to-service communication.

East-West Traffic: It is specifically designed to manage East-West traffic, which is the network traffic flowing inside the data center or cluster between different microservices.

Capabilities: It handles things like mutual TLS (mTLS) for security, retries, load balancing, and traffic control between these services without requiring changes to the application code itself.

NEW QUESTION # 42

......

Moreover, you do not need an active internet connection to utilize TestPDF desktop Salesforce Certified MuleSoft Integration Foundations practice exam software. It works without the internet after software installation on Windows computers.

The TestPDF web-based Salesforce Mule-101 Practice Test requires an active internet and it is compatible with all operating systems.
