

1z0-076 Latest Test Question, Top 1z0-076 Exam Dumps

BONUS!!! Download part of Exam4Free 1z0-076 dumps for free: <https://drive.google.com/open?id=1g4OX8B-4-cY7dbLVxHDBCE2Of500rS1k>

Our 1z0-076 test prep is of high quality. The passing rate and the hit rate are both high. The passing rate is about 98%-100%. We can guarantee that you have a very high possibility to pass the exam. The 1z0-076 guide torrent is compiled by the experts and approved by the professionals with rich experiences. The 1z0-076 prep torrent is the products of high quality compiled elaborately and gone through strict analysis and summary according to previous exam papers and the popular trend in the industry. The language is simple and easy to be understood. It makes any learners have no learning obstacles and the 1z0-076 Guide Torrent is appropriate whether he or she is the student or the employee, the novice or the personnel with rich experience and do the job for many years.

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 2	<ul style="list-style-type: none">• Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 3	<ul style="list-style-type: none">• Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 4	<ul style="list-style-type: none">• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 5	<ul style="list-style-type: none">• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.

Topic 7	<ul style="list-style-type: none"> • Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 8	<ul style="list-style-type: none"> • Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 9	<ul style="list-style-type: none"> • Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 10	<ul style="list-style-type: none"> • Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.

[2026] Oracle 1z0-076 Questions: An Incredible Exam Preparation Way

There is a succession of anecdotes, and there are specialized courses. Experts call them experts, and they must have their advantages. They are professionals in every particular field. The 1z0-076 test material, in order to enhance the scientific nature of the learning platform, specifically hired a large number of qualification exam experts, composed of product high IQ team, these experts by combining his many years teaching experience of 1z0-076 quiz guide and research achievements in the field of the test, to exam the popularization was very complicated content of Oracle Database 19c: Data Guard Administration exam dumps, better meet the needs of users of various kinds of cultural level. Expert team not only provides the high quality for the 1z0-076 Quiz guide consulting also help users solve problems at the same time, leak fill a vacancy, and finally to deepen the user's impression, to solve the problem of Oracle test material and no longer make the same mistake.

Oracle Database 19c: Data Guard Administration Sample Questions (Q103-Q108):

NEW QUESTION # 103

Which three are prerequisites for enabling Fast-Start Failover?

- A. The Fast-Start Failover target standby database must receive REDO synchronously when the configuration operates in Maximum Availability mode.
- B. A static service name must be configured only for the Fast-Start Failover target standby database.
- C. Flashback Database must be enabled on the Fast-Start Failover target standby database.
- D. The Fast-Start Failover target standby database may receive REDO either synchronously or asynchronously when the configuration operates in Maximum Performance mode.
- E. Flashback Database must be enabled on the primary database.

Answer: A,C,E

NEW QUESTION # 104

Which TWO statements are true about configuring Oracle Net Service in a Data Guard environment?

- A. Installing the oracle-database-preinstall-19c package is NOT sufficient to set up operating system kernel parameters for Oracle Net.
- B. Install the oracle-database-preinstall-19c package to set the kernel parameters for Oracle Net based on the Data Guard best practice guidelines.
- C. Enterprise Manager does not require static service registration to restart instances during the course of broker operations.
- D. It is necessary to use the failover clause for an address_list with multiple address lists in the tnsnames.ora file.
- E. A static service must be registered with the local listener to enable DGMGRL to restart instances during the course of broker operations.

Answer: A,E

Explanation:

* A static service must be registered with the local listener to enable DGMGRL to restart instances during the course of broker operations (A): For DGMGRL (Data Guard Manager Command-Line Interface) to perform instance management operations, such as restarting instances, a static service registration in the listener is required. This allows the broker to connect to the database instance even when the instance is not fully up and the dynamic service registration is not available.

* Installing the oracle-database-preinstall-19c package is NOT sufficient to set up operating system kernel parameters for Oracle Net (C): While the oracle-database-preinstall-19c package automates the setting of several kernel parameters to meet the preinstallation requirements for Oracle Database, it does not specifically tailor all settings for Oracle Net in a Data Guard configuration. Additional manual configuration may be required to optimize Oracle Net services for Data Guard operations.

References:

- * Oracle Data Guard Broker documentation
- * Oracle Net Services Administrator's Guide

NEW QUESTION # 105

In Oracle Database 19c, you can set the value of database initialization parameters in a database using the EDIT DATABASE...SET PARAMETER Command:

```
DGMGRL> EDIT DATABASE 'boston' SET PARAMETER log_archive_trace - 1;
```

Which THREE statements are TRUE about the command?

- A. The database must be available when the above command is run.
- B. The edit database parameter command can only be used to modify the value of a dynamic parameter in a database.
- C. The value set using this command is directly stored in the broker configuration file.
- D. The value set using this command is directly applied to the boston database.
- E. The EDIT DATABASE PARAMETER command can be used to set the value of a static parameter in a database.

Answer: A,B,D

Explanation:

The EDIT DATABASE...SET PARAMETER command in Data Guard Management (DGMGRL) is used to modify the value of initialization parameters for a database within a Data Guard configuration. This command can be used to modify both static and dynamic parameters, but if a static parameter is changed, the new value will take effect only after the database is restarted. The database must be up and running for the command to execute, and the values set using the command are directly applied to the specified database (in this case, 'boston').

NEW QUESTION # 106

Examine the following parameter settings of the physical standby database:

* STANDBY_FILE_MANAGEMENT=AUTO

* ENABLED_PDBS_ON_STANDBY=<null>

During which TWO tasks are files automatically created in the physical standby database after structure changes on the primary database?

- A. Adding a data file or creating a tablespace
- B. Creating a PDB from the existing PDB within the same CDB
- C. Renaming a data file in the primary database
- D. Performing transportable tablespaces
- E. Adding or dropping a redo file group

Answer: A,B

Explanation:

When STANDBY_FILE_MANAGEMENT is set to AUTO, the Oracle Data Guard automatically creates, deletes, and renames files on the standby database to match the changes made on the primary database. The tasks that lead to the automatic creation of files on the standby include:

* Adding a data file or creating a tablespace (C): When a new tablespace is created or a new data file is added on the primary database, the standby database automatically replicates this action, maintaining structural consistency with the primary database.

* Creating a PDB from the existing PDB within the same CDB (D): Creating a new Pluggable Database (PDB) within a Multitenant Container Database (CDB) on the primary database triggers an automatic creation of the corresponding PDB within the standby CDB. References:

- * Oracle Data Guard Concepts and Administration Guide

NEW QUESTION # 107

You notice that the SQL apply lag on your logical standby database has increased but the redo transport lag has not. Which four could be reasons for the increase in SQL apply lag?

- A. Many SQL apply operations do full table scans
- B. An undersized undo tablespace on the logical standby
- C. An increased number of bulk updates on the primary
- D. An undersized shared pool
- E. The standby redo log files are undersized on the primary database
- F. An increased number of bulk inserts on the primary

Answer: A,B,C,D

Explanation:

The SQL apply lag on a logical standby database can be caused by several factors:

A: An undersized undo tablespace can lead to delays in SQL apply operations as it may not be able to handle the volume of undo records generated by the SQL apply process.

B: SQL apply operations that do full table scans can consume significant system resources, potentially leading to higher apply lag.

C: An increased number of bulk updates on the primary database may generate a large volume of redo data, which can cause apply lag if the logical standby cannot apply the changes quickly enough.

F: An undersized shared pool may affect the parsing and execution of SQL statements by SQL apply, which can contribute to the apply lag.

Option D is less likely to be a direct cause of SQL apply lag compared to bulk updates, as inserts generate new data rather than modifying existing data, which SQL apply can typically handle more efficiently.

Option E is incorrect because the size of the standby redo log files on the primary database impacts redo transport lag, not SQL apply lag.

NEW QUESTION # 108

.....

It is known to us that the 21st century is an information era of rapid development. Now the people who have the opportunity to gain the newest information, who can top win profit maximization. In a similar way, people who want to pass 1z0-076 exam also need to have a good command of the newest information about the coming exam. However, it is not easy for a lot of people to learn more about the information about the study materials. Luckily, the 1z0-076 Study Materials from our company will help all people to have a good command of the newest information.
