It is understandable that different people have different preference in terms of 350-701 study guide. Taking this into consideration, we have prepared three kinds of versions of our 350-701 preparation questions: PDF, online engine and software versions. The PDF version of 350-701 training materials is convenient for you to print, the software version can simulate the real exam and the online version can be used on all electronic devices. If you are hesitating about which version should you choose, you can download our 350-701 free demo first to get a firsthand experience before you make any decision.

Cisco 350-701 Certification Exam, also known as Implementing and Operating Cisco Security Core Technologies, is a professional-level exam designed to test the knowledge and skills of security professionals in implementing and operating core security technologies. 350-701 exam is aimed at validating the candidate's proficiency in securing network infrastructures and identifying potential security threats. Implementing and Operating Cisco Security Core Technologies certification is a widely recognized credential in the field of cybersecurity and is highly valued by employers in the industry.

Valid 350-701 Test Book | 350-701 Actual Questions

Real Cisco 350-701 test questions provide the necessary knowledge and skills to clear the test in a short time. When applicants don't prepare with the latest Implementing and Operating Cisco Security Core Technologies (350-701) exam questions they fail and lose money. ValidDumps provides valid 350-701 practice test material for applicants who want to pass the 350-701 exam quickly.

Cisco 350-701 Certification Exam is designed to test the knowledge and skills required to implement and operate core security technologies. 350-701 exam is a requirement for those who wish to obtain the CCNP Security or CCIE Security certification. 350-701 exam covers a wide range of topics, including network security, cloud security, endpoint protection, and secure network access. It is a comprehensive exam that tests the abilities of security professionals to design, deploy, and manage security solutions in complex environments.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q314-Q319):

NEW QUESTION # 314

Drag and drop the Firepower Next Generation Intrusion Prevention System detectors from the left onto the correct definitions on the right.

□

Answer:

Explanation:

□

NEW QUESTION # 315

What is managed by Cisco Security Manager?

- A. WSA
- B. ESA
- C. access point O
- **D. ASA**

Answer: D

Explanation:

Explanation

NEW QUESTION # 316

What are two functions of TAXII in threat intelligence sharing? (Choose two.)

- A. determines the "what" of threat intelligence
- **B. Supports STIX information**
- C. exchanges trusted anomaly intelligence information
- **D. determines how threat intelligence information is relayed**
- E. allows users to describe threat motivations and abilities

Answer: B,D

NEW QUESTION # 317

An engineer has been tasked with implementing a solution that can be leveraged for securing the cloud users, data, and applications. There is a requirement to use the Cisco cloud native CASB and cloud cybersecurity platform. What should be used to meet these requirements?

- A. Cisco Cloud Email Security
- B. Cisco NGFW
- C. Cisco Umbrella
- **D. Cisco Cloudlock**

Answer: D

Explanation:

Explanation Explanation Cisco Cloudlock: Secure your cloud users, data, and applications with the cloud-native Cloud Access Security Broker (CASB) and cloud cybersecurity platform. Reference:

<https://www.cisco.com/c/dam/en/us/products/collateral/security/cloud-web-security/at-a-glance-c45-738565.pdf> Explanation

Cisco Cloudlock: Secure your cloud users, data, and applications with the cloud-native Cloud Access Security Broker (CASB) and cloud cybersecurity platform.

NEW QUESTION # 318

Which two behavioral patterns characterize a ping of death attack? (Choose two)

- A. The attack is fragmented into groups of 16 octets before transmission.
- **B. The attack is fragmented into groups of 8 octets before transmission.**
- C. Short synchronized bursts of traffic are used to disrupt TCP connections.
- D. Publicly accessible DNS servers are typically used to execute the attack.
- **E. Malformed packets are used to crash systems.**

Answer: B,E

Explanation:

Ping of Death (PoD) is a type of Denial of Service (DoS) attack in which an attacker attempts to crash, destabilize, or freeze the targeted computer or service by sending malformed or oversized packets using a simple ping command.

A correctly-formed ping packet is typically 56 bytes in size, or 64 bytes when the ICMP header is considered, and 84 including Internet Protocol version 4 header. However, any IPv4 packet (including pings) may be as large as 65,535 bytes. Some computer systems were never designed to properly handle a ping packet larger than the maximum packet size because it violates the Internet Protocol documented. Like other large but well-formed packets, a ping of death is fragmented into groups of 8 octets before transmission. However, when the target computer reassembles the malformed packet, a buffer overflow can occur, causing a system crash and potentially allowing the injection of malicious code.
