

# Pass Guaranteed Reliable NCP-DB-6.10 - Study Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Tool

Many customers want to check the content and quality of our NCP-DB-6.10 exam braindumps. So we developed trial versions for you. After you have used a trial version, you will have an overview of the content of the NCP-DB-6.10 simulating exam. This is enough to convince you that this is a product with high quality. If you are sure that you want this product, but we are not sure which version to buy, we can let you try multiple versions of NCP-DB-6.10 learning guide. And there are three varied versions on our website.

These people who used our products have thought highly of our NCP-DB-6.10 study materials. If you decide to buy our products and take it seriously consideration, we can make sure that it will be very easy for you to simply pass your exam and get the NCP-DB-6.10 certification in a short time. We are also willing to help you achieve your dream. Now give yourself a chance to have a try on our NCP-DB-6.10 Study Materials. You will have no regret spending your valuable time on our NCP-DB-6.10 learning guide.

## Exam NCP-DB-6.10 Syllabus - Certification NCP-DB-6.10 Test Answers

You must have thought about moving forward successfully in this competitive and fast-changing technological world. If you want to boost your career Nutanix NCP-DB-6.10 certification is the most acclaimed and honorable certificate in the tech sector. But the confusion regarding the preparation and relevant Nutanix NCP-DB-6.10 Practice Test questions must have emerged in your mind too.

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q189-Q194):

### NEW QUESTION # 189

Which MySQL deployment model is natively supported by NDB 6.5?

- A. MySQL Cluster (NDB engine)

- B. MySQL master-slave asynchronous replication
- **C. MySQL InnoDB Cluster / Group Replication**
- D. MySQL single instance on local storage

**Answer: C**

Explanation:

NDB supports modern MySQL HA architectures such as InnoDB Cluster / Group Replication. The MySQL NDB Cluster engine is not supported.

#### NEW QUESTION # 190

How should an administrator modify the Alert Severity level within Era?

- A. From the dropdown menu choose Alerts > List. Select the message to be changed and choose Set Status to Resolved or Set Status to Acknowledged.
- B. From the dropdown menu choose Alerts Policies. Choose the Policy to be modified and choose either Set Enabled or Set Disabled.
- C. From the dropdown menu choose Alerts > Policies. Then choose Update next to Alert Retention.
- **D. From the dropdown menu choose Alerts Policies. Choose the Policy to be modified and set the desired severity level.**

**Answer: D**

Explanation:

In Nutanix Era, an administrator can modify the Alert Severity level by navigating to the Alerts Policies from the dropdown menu. Once there, they can select the Policy that needs to be modified and set the desired severity level. This allows the administrator to customize the alerts according to their requirements, ensuring that they are notified of the most critical events in their environment.

#### NEW QUESTION # 191

What does the Era I-Click Provisioning service do?

- A. Create space-efficient database snapshots
- B. Customizable recovery SLAs for continuous RPOs
- **C. Create space-efficient clones and zero-byte database clones**
- D. Cloning with security inserting pre and post masking scripts

**Answer: C**

Explanation:

The Era One-Click Provisioning service in Nutanix Database Automation (NCP-DB) simplifies and automates database administration. It brings one-click simplicity to database provisioning and life-cycle management. This service enables database administrators to provision, clone, and refresh the database clones to any point in time. Specifically, it enables the creation of space-efficient clones and zero-byte database clones. This is part of Era's copy data management service, which includes components like Time Machine, one-click cloning and refresh, and one-click backup.

#### NEW QUESTION # 192

A customer has NDB configured to create snapshots of their production databases every 4 hours.

A developer requires a copy of the current production data at 7:00am of each day. What is the most efficient way to meet this requirement?

- **A. Configure Time Machine to create a clone from a daily snapshot at 7:00am.**
- B. Run a script which creates a clone from the latest snapshot at 7:00am.
- C. Configure a clone with a daily Data Refresh Schedule at 7:00am.
- D. Authorize the developer in RBAC to create clones as required.

**Answer: A**

Explanation:

Time Machine is a feature of Nutanix Era that allows you to create and manage snapshots of your databases. You can use Time

Machine to create clones from any snapshot, either manually or automatically. You can also configure Time Machine to create clones from snapshots based on a schedule, such as daily, weekly, or monthly. This way, you can ensure that your clones are always up to date with the latest data from your production databases. In this scenario, the most efficient way to meet the developer's requirement is to configure Time Machine to create a clone from a daily snapshot at 7:00am. This will save the developer's time and effort, as well as reduce the storage consumption by using the existing snapshots.

#### NEW QUESTION # 193

Which two options can NDB leverage to refresh a database clone? (Choose two.)

- A. Transaction logs
- B. Cerebro logs
- C. Snapshots
- D. Templates

**Answer: A,C**

Explanation:

NDB can leverage snapshots and transaction logs to refresh a database clone to the latest state of the source database. Snapshots are point-in-time copies of the database that are stored on the Nutanix cluster. Transaction logs are records of the changes made to the database after the snapshot was taken. NDB can use either snapshots or transaction logs, or a combination of both, to refresh a database clone. Cerebro logs and templates are not used for refreshing database clones. Cerebro logs are used for log catch-up operations, which are different from refresh operations. Templates are used for provisioning new databases, not for refreshing existing ones.

#### NEW QUESTION # 194

.....

The website pages list the important information about our NCP-DB-6.10 real quiz, the exam name and code, the updated time, the total quantity of the questions and answers, the characteristics and merits of the product, the price, the discounts to the client, the details and the guarantee of our NCP-DB-6.10 Training Materials, the contact methods, the evaluations of the client on our product and the related exams. You can analyze the information the website pages provide carefully before you decide to buy our NCP-DB-6.10 real quiz
