IT업계 취업 준비생이라면 국제적으로도 승인받는 IT인증자격증 정도는 몇개 취득해야 하지 않을까 싶습니다. Cisco인증 300-740시험을 통과하여 인기 자격증을 취득하시면 취업경쟁율이 제고되어 취업이 쉬워집니다. Itexamdump의Cisco인증 300-740덤프는 많은 시험본 분들에 의해 검증된 최신 최고의 덤프공부자료입니다.망설이지 마시고Itexamdump제품으로 한번 가보세요.

Cisco 300-740 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Application and Data Security This section of the exam measures skills of Cloud Security Analysts and explores how to defend applications and data from cyber threats. It introduces the MITRE ATT&CK framework, explains cloud attack patterns, and discusses mitigation strategies. Additionally, it covers web application firewall functions, lateral movement prevention, microsegmentation, and creating policies for secure application connectivity in multicloud environments.
주제 2	<ul style="list-style-type: none"> User and Device Security: This section of the exam measures skills of Identity and Access Management Engineers and deals with authentication and access control for users and devices. It covers how to use identity certificates, enforce multifactor authentication, define endpoint posture policies, and configure single sign-on (SSO) and OIDC protocols. The section also includes the use of SAML to establish trust between devices and applications.
주제 3	<ul style="list-style-type: none"> SAFE Key Structure: This section of the exam measures skills of Network Security Designers and focuses on the SAFE framework's key structural elements. It includes understanding 'Places in the Network'—the different network zones—and defining 'Secure Domains' to organize security policy implementation effectively.
주제 4	<ul style="list-style-type: none"> Integrated Architecture Use Cases: This section of the exam measures the skills of Cloud Solution Architects and covers key capabilities within an integrated cloud security architecture. It focuses on ensuring common identity across platforms, setting multicloud policies, integrating secure access service edge (SASE), and implementing zero-trust network access models for more resilient cloud environments.
주제 5	<ul style="list-style-type: none"> Threat Response: This section of the exam measures skills of Incident Response Engineers and focuses on responding to threats through automation and data analysis. It covers how to act based on telemetry and audit reports, manage user or application compromises, and implement response steps such as containment, reporting, remediation, and reinstating services securely.

주제 6	<ul style="list-style-type: none"> • Visibility and Assurance: This section of the exam measures skills of Security Operations Center (SOC) Analysts and focuses on monitoring, diagnostics, and compliance. It explains the Cisco XDR solution, discusses visibility automation, and describes tools for traffic analysis and log management. The section also involves diagnosing application access issues, validating telemetry for behavior analysis, and verifying user access with tools like firewall logs, Duo, and Cisco Secure Workload.
주제 7	<ul style="list-style-type: none"> • Industry Security Frameworks: This section of the exam measures the skills of Cybersecurity Governance Professionals and introduces major industry frameworks such as NIST, CISA, and DISA. These frameworks guide best practices and compliance in designing secure systems and managing cloud environments responsibly.

높은 통과율 300-740퍼펙트 덤프데모문제 시험대비 공부자료

Itexamdump는 믿을 수 있는 사이트입니다. IT업계에서는 이미 많이 알려져 있습니다. 그리고 여러분에 신뢰를 드리 기 위하여 Cisco 인증300-740 관련자료의 일부분 문제와 답 등 샘플을 무료로 다운받아 체험해볼 수 있게 제공합니다. 아주 만족할 것이라고 믿습니다. Itexamdump제품에 대하여 아주 자신이 있습니다. Cisco 인증300-740 도 여러분의 무용지물이 아닌 아주 중요한 자료가 되리라 믿습니다. 여러분께서는 아주 순조로이 시험을 패스하실 수 있을 것입니다.

최신 CCNP Security 300-740 무료샘플문제 (Q25-Q30):

질문 # 25

The importance of VPN policies for remote users is to ensure:

- **A. Secure and encrypted access to corporate resources from any location**
- B. The use of public Wi-Fi networks for corporate access
- C. Remote users cannot access sensitive corporate resources
- D. That remote users have a slower connection to prioritize office users

정답: A

질문 # 26

Refer to the exhibit. An engineer must enable access to Salesforce using Cisco Umbrella and Cisco Cloudlock. These actions were performed:

* From Salesforce, add the Cloudlock IP address to the allow list

* From Cloudlock, authorize Salesforce

However, Salesforce access via Cloudlock is still unauthorized. What should be done to meet the requirements?

- **A. From the Salesforce admin page, grant network access to Cloudlock**
- B. From the Cloudlock dashboard, grant network access to Salesforce.
- C. From the Salesforce admin page, grant API access to Cloudlock.
- D. From the Cloudlock dashboard, grant API access to Salesforce.

정답: A

설명:

When integrating Cisco Cloudlock with SaaS platforms like Salesforce, two core authorizations are required: network access and API authorization. In the scenario, Cloudlock has been authorized in Salesforce, and its IP has been allow-listed. However, if access is still denied, the most likely cause is that Salesforce has not been configured to accept traffic from Cloudlock's IP range - a process handled from the Salesforce admin panel.

To resolve the issue, network access must be explicitly granted to Cloudlock from within Salesforce. This ensures that Salesforce accepts requests initiated by Cloudlock for monitoring and enforcement.

Reference: Designing and Implementing Secure Cloud Access for Users and Endpoints (SCAZT), Section 4: Application and Data Security, Pages 85-87.

Also supported by Cisco Cloudlock for Salesforce Deployment Guide.

질문 # 27

Refer to the exhibit. An engineer is investigating an unauthorized connection issue using Cisco Secure Cloud Analytics. Which two actions must be taken? (Choose two.)

- A. Reinstall the host from scratch.
- **B. Block the unwanted IP addresses on the firewall**
- C. Reinstall the host from a recent backup.
- **D. Inform the incident management team.**
- E. Validate the IDS logs

정답: B,D

설명:

The Secure Cloud Analytics alert indicates suspicious heartbeat-based connections from an internal server (ip-10-201-0-16) to multiple suspicious IPs over UDP/port 53 (DNS). This behavior suggests command-and-control (C2) activity or botnet communications.

B: Alerting the incident response (IR) team is a critical next step in escalating a verified threat as per SCAZT Section 6 (Threat Response, Pages 114-117).

D: Blocking the identified malicious IPs on perimeter firewalls or network access control devices is an appropriate containment step to disrupt communication.

Reinstallation (A/E) is premature without a full forensic investigation. Validating IDS logs (C) is useful but not immediate response-focused compared to actions B and D.

Reference: Designing and Implementing Secure Cloud Access for Users and Endpoints (SCAZT), Section 6, Pages 114-117

질문 # 28

Cisco Secure Cloud Analytics helps in:

- A. Solely managing on-premises network traffic
- B. Complicating compliance reporting
- C. Decreasing visibility into cloud infrastructure
- **D. Identifying potential security threats across cloud environments**

정답: D

질문 # 29

A web application firewall (WAF) protects against DDoS attacks by:

- A. Decreasing the security settings to allow all traffic
- B. Physically disconnecting the server during an attack
- C. Ignoring signs of an attack to maintain website functionality
- **D. Analyzing and filtering incoming traffic to identify and block malicious requests**

정답: D

질문 # 30
