It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li> </ul>

## SAP Certified Associate - Integration Developer Sample Questions (Q54-Q59):

### NEW QUESTION # 54

In your integration flow process, the request reply returns a message with namespaces. What can you do to delete namespaces from this message? Note: There are 2 correct answers to this question.

- A. Set up the namespace mapping in the Runtime Configuration.
- B. Set up the request reply to delete the namespaces
- C. Use a Content Modifier
- D. Use an XSLT mapping

**Answer: C,D**

Explanation:

A Content Modifier is a step in an integration flow that allows you to modify the message header or body using expressions or constants. You can use a Content Modifier to delete namespaces from a message by using expressions that remove the namespace declarations or prefixes from the XML elements or attributes. For example, you can use the expression `replace($body,'xmlns:ns[0-9] +=\['`
