

Die seit kurzem aktuellsten USGBC LEED-AP-BD-C Prüfungsunterlagen, 100% Garantie für Ihren Erfolg in der LEED AP Building Design + Construction (LEED AP BD+C) Prüfungen!

BONUS!!! Laden Sie die vollständige Version der Zertpruefung LEED-AP-BD-C Prüfungsfragen kostenlos herunter:
https://drive.google.com/open?id=1Y-LhWfbSaS_cQyGvJL6JuD1W_otpI7zj

Zertpruefung spezialisiert sich auf die Schulungsunterlagen zur USGBC LEED-AP-BD-C Zertifizierungsprüfung. Mit Zertpruefung brauchen Sie sich keine Sorgen für die USGBC LEED-AP-BD-C Zertifizierungsprüfung zu machen. Die Zertifizierungsantworten von Zertpruefung sind qualitativ hochwertig. Sobald Sie Zertpruefung wählen, können Sie in kurzer Zeit die Prüfung mit einer hohen Note die USGBC LEED-AP-BD-C Zertifizierungsprüfung effizient bestehen und bessere Resultate bei weniger Einsatz erzielen.

USGBC LEED-AP-BD-C Prüfungsplan:

Thema	Einzelheiten
Thema 1	Project Surroundings and Public Outreach: LEED Green Associates learn about promoting sustainable practices, regional design considerations that incorporate green construction measures, cultural awareness issues related to historic or heritage impacts, and ensuring that sustainability efforts are respectful of local values.
Thema 2	Sustainable Sites: It covers site assessment and planning that involves evaluating various site characteristics, such as topography, hydrology, climate, vegetation, and soil conditions. It also covers assessing a site's potential as a resource for energy flows while addressing construction activity pollution prevention measures.
Thema 3	Energy and Atmosphere: In this topic, LEED Green Associates focuses on building reuse, including historic building renovations. It covers material reuse strategies, enclosure materials, and permanently installed interior components into new designs.
Thema 4	Water Efficiency: This topic measures the skills of LEED Green Associates in optimizing water use in building projects. It explores strategies for reducing outdoor water use through efficient irrigation practices, including landscape water requirements and irrigation systems. It also covers using native and adaptive plant species to minimize irrigation demands.

Thema 5	• Integrative Strategies: It emphasizes the importance of an integrative process. The topic also covers their knowledge about the value of teamwork in developing integrative green strategies and how they can collaborate throughout different project phases.
Thema 6	• Indoor Environmental Quality: This domain measures the skills of LEED Green Associates in creating healthy indoor environments. It emphasizes the importance of maintaining adequate ventilation levels through both natural and mechanical means. Additionally, candidates will be assessed on topics such as tobacco smoke control measures.
Thema 7	• Building Loads: This topic is focused on optimizing building performances through effective load management. It addresses design considerations such as building orientation and glazing selection while clarifying regional factors that influence these decisions.
Thema 8	• LEED Process: This topic tests the skills of LEED Green Associates involved in green building initiatives. It focuses on various methods to achieve LEED goals, such as developing credit interpretation rulings and utilizing Regional Priority Credits to explore synergies within the LEED system.
Thema 9	• Location and Transportation: This topic measures the skills of LEED Green Associates in sustainable development. It addresses critical factors in site selection, including development constraints and opportunities related to environmental considerations, and community connectivity concepts, such as walkability and street design, which are vital for promoting sustainable transportation options.

LEED-AP-BD-C Fragen Beantworten, LEED-AP-BD-C Vorbereitung

Warum wollen wir, Sie vor dem Kaufen der USGBC LEED-AP-BD-C Prüfungsunterlagen zuerst zu probieren? Warum dürfen wir garantieren, dass Ihr Geld für die Software zurückgeben, falls Sie in der USGBC LEED-AP-BD-C Prüfung durchfallen? Der Grund liegt auf unserer Konfidenz für unsere Produkte. Die USGBC LEED-AP-BD-C Prüfung wird fortlaufend aktualisiert und wir aktualisieren gleichzeitig unsere Software.

USGBC LEED AP Building Design + Construction (LEED AP BD+C) LEED-AP-BD-C Prüfungsfragen mit Lösungen (Q40-Q45):

40. Frage

During a review of the HVAC equipment submittal, the Commissioning Authority (CxA) determined that the contractor substituted a higher efficiency piece of equipment. Which of the following is the priority for the CxA to consider?

- A. Coordination of other contractors
- **B. Owner's Project Requirements**
- C. Equipment Maintenance Plan
- D. Energy meter location

Antwort: B

Begründung:

Explanation

The Owner's Project Requirements (OPR) is a document that defines the goals, expectations, and performance criteria of the project, as established by the owner or the owner's representative¹. The OPR is one of the key deliverables of the commissioning process and serves as the basis for the design, construction, and operation of the building systems. Therefore, the priority for the Commissioning Authority (CxA) to consider when the contractor substitutes a higher efficiency piece of equipment is whether the substitution meets or exceeds the OPR. The CxA should verify that the new equipment is compatible with the OPR and does not compromise the performance, functionality, or reliability of the system. The CxA should also communicate the substitution to the owner and the design team and document the change in the commissioning plan and report.

41. Frage

What building classification requires the energy model to determine the predicted power usage effectiveness (PUE) for Energy and Atmosphere Prerequisite, Minimum Energy Performance?

- A. Data Center
- B. Warehouse
- C. Hospital
- D. Office

Antwort: A

Begründung:

Explanation

This building classification requires the energy model to determine the predicted power usage effectiveness (PUE) for Energy and Atmosphere Prerequisite, Minimum Energy Performance, because data centers have high energy intensity and cooling demand, and PUE is a metric that measures how efficiently a data center uses energy¹².

42. Frage

A project team is using the whole building simulation model to quantify the percentage of energy savings for the project. Which of the following should remain the same for both the baseline building and the proposed building?

- A. Building operating schedule and occupancy hours
- B. Total window area and building envelope construction
- C. Building operating schedule and total window area
- D. Building envelope construction and occupancy hours

Antwort: A

Begründung:

Explanation

This option requires the project team to use the same building operating schedule and occupancy hours for both the baseline building and the proposed building in the whole building simulation model¹. This option ensures that the energy savings are calculated based on the same level of building activity and occupancy, which are major factors that affect the energy performance of a building².

43. Frage

A construction manager is looking for a project management tool that offers energy management strategies, benchmarking software tools for buildings, and product procurement guidelines. Which of the following is recognized by U.S. Green Building Council to assist them?

- A. ENERGY STAR®
- B. SCAQMD
- C. SMACNA
- D. Green Seal

Antwort: A

Begründung:

ENERGY STAR® (C) provides tools recognized by the U.S. Green Building Council (USGBC) that assist with energy management strategies, benchmarking, and procurement guidelines. ENERGY STAR offers resources for energy performance benchmarking, operational efficiency, and product standards, which help project managers optimize energy use in line with LEED requirements. Green Seal (A) and SCAQMD (B) focus on materials and emissions, while SMACNA (D) provides guidelines for air

quality management.

44. Frage

Which individual occupant lighting control meets the requirements of Indoor Environmental Quality Credit, Interior Lighting?

- A. Three Level (on, 50%, off)
- B. Three Level (on, 75%, off)
- **C. Three Level (on, 25%, off)**
- D. Two Level (on, off)

Antwort: C

Begründung:

The Indoor Environmental Quality Credit, Interior Lighting, requires the project team to provide individual occupant lighting control for at least 90% of the individual occupant spaces, or at least 50% of the shared multi-occupant spaces. The lighting control must enable occupants to adjust the lighting to suit their individual tasks and preferences, and must have at least three lighting levels, excluding off. Therefore, a three level (on, 25%, off) lighting control meets the requirements of this credit, while a two level (on, off) lighting control does not. A three level (on, 50%, off) or a three level (on, 75%, off) lighting control may also meet the requirements, depending on the lighting power density and the daylight availability in the space².

Die Prüfungsmaterialien von USGBC LEED-AP-BD-C Zertifizierungsprüfung von unserer Zertprüfung existieren in der Form von PDF und Simulationssoftware, in der alle Testaufgaben und Antworten von USGBC LEED-AP-BD-C Zertifizierung enthalten sind. Inhalte dieser Lehrbücher sind umfassend und zuverlässig. Hoffentlich kann Zertprüfung Ihr bester Helfer bei der Vorbereitung der USGBC LEED-AP-BD-C Zertifizierungsprüfung werden. Falls Sie leider die LEED-AP-BD-C Prüfung nicht bestehen, bitte machen Sie keine Sorge, denn wir werden alle Ihre Einkaufsgebühren bedingungslos zurückgeben.
