Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q13-Q18):

NEW QUESTION # 13
Refer to the exhibits.
Exhibit A
Exhibit B
Exhibit C
A customer is trying to set up a VPN with a FortiGate, but they do not have a backup of the configuration.
Output during a troubleshooting session is shown in the exhibits A and B and a baseline VPN configuration is shown in Exhibit C
Referring to the exhibits, which configuration will restore VPN connectivity?

- A.
- B.

- C. ☐
- D. ☐

Answer: C

Explanation:
The output in Exhibit A shows that the VPN tunnel is not established because the peer IP address is incorrect.
The output in Exhibit B shows that the peer IP address is 192.168.1.100, but the baseline VPN configuration in Exhibit C shows that the peer IP address should be 192.168.1.101.
To restore VPN connectivity, you need to change the peer IP address in the VPN tunnel configuration to 192.168.1.101. The correct configuration is shown below:
config vpn ipsec phase1-interface
edit "wan"
set peer-ip 192.168.1.101
set peer-id 192.168.1.101
set dhgrp 1
set auth-mode psk
set psk SECRET_PSK
next
end
Option A is incorrect because it does not change the peer IP address. Option B is incorrect because it changes the peer IP address to 192.168.1.100, which is the incorrect IP address. Option D is incorrect because it does not include the necessary configuration for the VPN tunnel.

NEW QUESTION # 14
SD-WAN is configured on a FortiGate. You notice that when one of the internet links has high latency the time to resolve names using DNS from FortiGate is very high.
You must ensure that the FortiGate DNS resolution times are as low as possible with the least amount of work.
What should you configure?

- A. Configure local out traffic to use the outgoing interface based on SD-WAN rules with a manual defined IP associated to a loopback interface and configure an SD-WAN rule from the loopback to the DNS server.
- B. Configure two DNS servers and use DNS servers recommended by the two internet providers.
- C. Configure local out traffic to use the outgoing interface based on SD-WAN rules with the interface IP and configure an SD-WAN rule to the DNS server.
- D. Configure an SD-WAN rule to the DNS server and use the FortiGate interface IPs in the source address.

Answer: C

Explanation:
SD-WAN is a feature that allows users to optimize network performance and reliability by using multiple WAN links and applying rules based on various criteria, such as latency, jitter, packet loss, etc. One way to ensure that the FortiGate DNS resolution times are as low as possible with the least amount of work is to configure local out traffic to use the outgoing interface based on SD-WAN rules with the interface IP and configure an SD-WAN rule to the DNS server. This means that the FortiGate will use the best WAN link available to send DNS queries to the DNS server according to the SD-WAN rule, and use its own interface IP as the source address. This avoids NAT issues and ensures optimal DNS performance. Reference:

NEW QUESTION # 15
Refer to the exhibit.
☐
A customer wants to automate the creation and configuration of FortiGate VM instances in a VMware vCenter environment using Terraform. They have the creation part working with the code shown in the exhibit.
Which code snippet will allow Terraform to automatically connect to a newly deployed FortiGate if its IP was dynamically assigned by VMware NSX-T?

- A. ☐
- B. ☐
- C. ☐
- D. ☐

Answer: C

NEW QUESTION # 16

Which two statements about bounce address tagging and verification (BATV) on FortiMail are true? (Choose two.)

- A. You must publish the BATV public key as a DNS TXT record.
- B. BATV will use symmetric keys to verify the bounce address tag.
- C. FortiMail will insert the BATV tag to the sender address in the envelope.
- D. Emails with an empty sender address will be subjected to bounce verification.

Answer: C,D

NEW QUESTION # 17
