Purchase this updated OCPE Category-7A-General-and-Household-Pest-Control Exam Practice material today and start your journey to a shining career.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q65-Q70):

NEW QUESTION # 65

Carpenter ant control is obtained by the elimination of:

- A. Inside colonies and perimeter control
- **B. Both inside and near building colonies**
- C. The outside colony

Answer: B

Explanation:

Carpenter ants often have multiple colonies, including satellite colonies inside structures and parent colonies outside near the building. Effective control, as outlined in the General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 7: Ants), requires eliminating both inside and near building colonies to prevent reinfestation. Option B (outside colony only) is insufficient, as satellite colonies inside will persist. Option C (inside colonies and perimeter control) is part of the strategy but does not address the parent colony outside.

NEW QUESTION # 66

Cockroaches develop through:

- A. Total metamorphosis (egg, adult)
- B. Complete metamorphosis (egg, larva, pupa, adult)
- **C. Gradual metamorphosis (egg, nymph, adult)**

Answer: C

Explanation:

Cockroaches undergo gradual metamorphosis, which includes three stages: egg, nymph, and adult.

Nymphs hatch from eggs and resemble smaller, wingless adults, molting several times before reaching maturity. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 7: Cockroaches) confirms this life cycle for common species like the German cockroach.

Option B (complete metamorphosis) applies to insects like flies or beetles. Option C (total metamorphosis) is not a recognized term and is incorrect.

NEW QUESTION # 67

_____ pressure is suggested for indoor use with a handheld sprayer.

- A. A power sprayer and high
- **B. Low**
- C. High

Answer: B

Explanation:

For indoor applications with a handheld sprayer, low pressure is recommended to minimize overspray and reduce the risk of pesticide drift onto non-target areas, such as furniture or food surfaces. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 5: Pesticide Application) advises using low-pressure settings (typically under 50 psi) for indoor crack-and-crevice or spot treatments. Option A (high pressure) and Option B (power sprayer and high) are more suited for outdoor or large-scale applications, not indoor household pest control.

NEW QUESTION # 68

Carpenter ants:

- A. Make transportation tubes from the chewed wood
- **B. Discard the wood from their galleries**
- C. Feed on the chewed wood from their cavities

Answer: B

Explanation:

Carpenter ants excavate wood to create galleries for nesting but do not feed on it; they discard the wood as sawdust-like frass outside their galleries. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Ants) notes that this frass is a key sign of carpenter ant activity. Option A (feed on the wood) is incorrect, as they feed on insects and sugary substances.

Option B (make transportation tubes) applies to termites, not carpenter ants.

NEW QUESTION # 69

For pesticide applications performed on school property, the commercial pesticide applicator is:

- A. Required to notify students, faculty, and staff as schools are not required to notify students, faculty, and staff
- **B. Required to notify the School IPM Coordinator as well as the students, faculty, and staff**
- C. Required to provide pesticide application information to the School IPM Coordinator if requested but not conduct the notification

Answer: B

Explanation:

Under the New Jersey School IPM Act (N.J.A.C. 7:30-13), commercial pesticide applicators must notify the School IPM Coordinator and students, faculty, and staff of pesticide applications on school property. This includes advance notice (at least 72 hours prior) and posting signs at the application site.

The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 4: IPM in Schools) aligns with these requirements. Option A is incorrect because schools are also required to notify, but the applicator has a direct responsibility. Option C is incorrect, as notification is mandatory, not optional.

NEW QUESTION # 70

.....

Successful people are never satisfying their current achievements. So they never stop challenging themselves. If you refuse to be an ordinary person, come to learn our Category-7A-General-and-Household-Pest-Control preparation questions.
