Our AP-219 guide torrent will be your best assistant to help you gain your AP-219 certificate.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q84-Q89):

NEW QUESTION # 84

Which option is available for an admin to use as middleware to import data to, or export data from Order Management?

- A. Find an application on AppExchange
- B. Use the Developer console
- C. Use Data Loader
- D. Write Apex classes to query the database and write to a file
- E. Use Workbench to access the database

Answer: C

Explanation:

Use Data Loader. Data Loader is a client application that allows administrators to bulkimport or export data from Salesforce using CSV files. The administrator can use Data Loader to import data into Order Management objects, such as Order Summary, Order Item Summary, Fulfillment Order, etc., or export data from these objects for backup or analysis purposes.

NEW QUESTION # 85

What type of relationship exists between FulfillmentOrder and Order Delivery Method?

- A. One-to-One Lookup (Location) FulfillmentFrom LocationId
- B. Master-Detail (Order Delivery Method)
- C. Junction (Many to Many)
- D. Lookup (Order Delivery Method)

Answer: D

Explanation:

The type of relationship that exists between FulfillmentOrder and Order Delivery Method is Lookup (OrderDelivery Method). A Lookup field is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. In this case, a FulfillmentOrder has a Lookup field named Order Delivery Method that references an Order Delivery Method record. An Order Delivery Method is a record that represents a delivery option for fulfilling orders, such as standard shipping, express shipping, in-store pickup, etc. An Order Delivery Method can have many FulfillmentOrders associated with it, but a FulfillmentOrder can only have one Order Delivery Method. https://help.salesforce.com/s/articleView?id=sf.order_management_order_delivery_method.htm&type=5

NEW QUESTION # 86

A developer is creating a flow to generate Fulfillment Orders for Order Summaries. What object is used to generate the Fulfillment Groups?

- A. Products
- B. Fulfillment Summaries
- C. Order Fulfillment Summaries
- **D. Order Product Summaries**

Answer: D

NEW QUESTION # 87

Which set of conditions is required for an Order Summary object to be created?

- A. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and the Create OrderSummary Process is installed.
- B. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and Create OrderSummary Flow is activated.
- **C. An Order is created, the Create Order Summary Process is installed and the Create Order Summary Process is active**
- D. An Order is created, its status is set to Draft, Create OrderSummaryFlow is installed and Create OrderSummary Flow is activated.

Answer: C

Explanation:

The Order Summary object is a custom object that stores information about an order, such as the total amount, the number of items, and the fulfillment status. The Order Summary object is created by a process called Create Order Summary Process, which runs whenever an order is created or updated. The process calls a flow called Create OrderSummary Flow, which calculates the order summary fields and creates or updates the order summary record. The process and the flow are part of the Order Management package and must be installed and activated for the order summary object to be created. Reference: Order Management Lifecycle, Order Management Objects, Configure Order Management Flows

NEW QUESTION # 88

Universal Containers (UC) is evaluating Salesforce Order Management for managing its overarching process because their current system is written mostly in Apex code and has proved difficult to modify, deploy and debug. What are three advantages of using Flow Builder vs writing Apex code to manage the main flow of Order data?

- A. It allows for non-coding members of staff to contribute suggestions for optimizations and better overall customer experience
- **B. The admin can easily debug specific business cases visually.**
- **C. The admin can attach a debugger to live customer sessions**
- **D. Because it is visual it is also self-documenting as changes are made**
- E. It will notify the admin before a third party integration's data interface has changed

Answer: B,C,D

Explanation:

Three advantages of using Flow Builder vs writing Apex code to manage the main flow of Order data are:

The admin can attach a debugger to live customer sessions. This allows the admin to monitor and troubleshoot the flow execution in real time, without affecting the customer experience or data integrity.

The admin can easily debug specific business cases visually. This allows the admin to test the flow with different input values and see how the flow behaves in a graphical interface, without writing any code.

Because it is visual it is also self-documenting as changes are made. This allows the admin to easily understand and maintain the flow logic, as well as track the changes and versions of the flow.
