Zscaler ZDTA Valid Test Testking - Valid ZDTA Test Duration

Providing our customers with up to 1 year of free Zscaler ZDTA questions updates is also our offer. These Zscaler ZDTA free dumps updates will help you prepare according to the latest ZDTA test syllabus in case of changes. 24/7 customer support is available at TorrentExam to assist users of the ZDTA Exam Questions through the journey. Above all, TorrentExam also offers a full refund guarantee (terms and conditions apply) to our customers. Don't miss these amazing offers. Download ZDTA actual exam Dumps today!

Zscaler Digital Transformation Administrator Sample Questions (Q37-Q42):

NEW QUESTION # 37

What enables zero trust to be properly implemented and enforced between an originator and the destination application?

- A. Connectivity between the originator and the destination application is over IPsec tunnels.
- **B. Access is granted without sharing the network between the originator and the destination application.**
- C. Trusted network criteria designate the locations of originators which can be trusted.
- D. Cloud firewall policies ensure that only authenticated users are allowed access to destination applications.

Answer: B

Explanation:

Zero Trust is achieved by granting users application#level access without ever placing them on the same network as the destination, ensuring users can reach only the specific app and never the underlying network.

NEW QUESTION # 38

What is the name of the feature that allows the platform to apply URL filtering even when a Cloud APP control policy explicitly permits a transaction?

- A. Allow and Quarantine
- **B. Allow Cascading**
- C. Allow and Scan
- D. Allow URL Filtering

Answer: B

Explanation:

The feature that allows Zscaler to apply URL filtering even when a Cloud App control policy explicitly permits a transaction is called Allow Cascading. This feature ensures that even if a cloud application is permitted by the Cloud App control policy, the URL filtering policy can still be enforced. This is useful in cases where granular URL control is needed on top of cloud app permissions, providing layered security controls.

The study guide clearly explains that Allow Cascading enables URL filtering policies to cascade or take precedence and thus still inspect and potentially block URLs even if the cloud app is allowed by policy. This allows administrators to fine-tune access and ensure additional inspection layers on web traffic .

NEW QUESTION # 39

How does a Zscaler administrator troubleshoot a certificate pinned application?

- A. They could reboot the endpoint device.
- **B. They could look at SSL logs for a failed client handshake.**
- C. They could look into the SaaS application analytics tab.
- D. They could inspect the ZIA Web Policy.

Answer: B

Explanation:

Certificate pinning prevents SSL interception by validating a server's certificate against known values. When ZIA performs SSL inspection, it substitutes the certificate with one signed by Zscaler's CA. This causes the handshake to fail for pinned applications. To troubleshoot, an administrator should review SSL logs to identify handshake failures, which indicate certificate pinning issues. Logs will show the TLS negotiation details, including any disruptions.

NEW QUESTION # 40

If you're migrating from an on-premises proxy, you will already have a proxy setting configured within the browser or within the system. With Tunnel Mode, the best practice is to configure what type of proxy configuration?

- A. Execute a GPO update to retrieve the proxy settings from AD.
- B. Use an automatic configuration script (forwarding PAC file).
- **C. Enforce no Proxy Configuration.**
- D. Use Web Proxy Auto Discovery (WPAD) to auto-configure the proxy.

Answer: C

NEW QUESTION # 41

What mechanism identifies the ZIA Service Edge node that the Zscaler Client Connector should connect to?

- A. The PAC file used in the Forwarding Profile
- **B. The PAC file used in the Application Profile**
- C. The Machine Key used in the Application Profile
- D. The IP ranges included/excluded in the App Profile

Answer: B

Explanation:

The PAC file used in the Application Profile is the mechanism that identifies the ZIA Service Edge node that the Zscaler Client Connector should connect to. The PAC (Proxy Auto-Configuration) file contains rules that direct client traffic to the appropriate service edge based on IP ranges, location, or other criteria.

The study guide explains that the Application Profile's PAC file plays a key role in routing client connections to the nearest or optimal ZIA Service Edge node to ensure efficient traffic forwarding and policy enforcement.

NEW QUESTION # 42

.....

This is where your ZDTA exam prep really takes off, in the testing your knowledge and ability to quickly come up with answers in the ZDTA online tests. Using ZDTA practice exams is an excellent way to increase response time and queue certain answers to common issues. Get ZDTA ebooks from TorrentExam which contain real ZDTA exam questions and answers. You will pass your ZDTA exam on the first attempt using only TorrentExam's ZDTA excellent preparation tools and tutorials
