順便提一下，可以從雲存儲中下載KaoGuTi JN0-650考試題庫的完整版：https://drive.google.com/open?id=1pLdNRY_SMtQyWmjnm_uhJj3T61y1a7p

KaoGuTi可以為你提供捷徑，給你節約好多時間和精力換。KaoGuTi會為你的Juniper JN0-650認證考試提供很好的培訓工具，有效的幫助你通過Juniper JN0-650認證考試。如果你在其他網站也看到了可以提供相關資料，你可以繼續往下看，你會發現其實資料主要來源於KaoGuTi，而且KaoGuTi提供的資料最全面，而且更新得最快。

Juniper JN0-650 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">• EVPN: This section addresses Ethernet VPN technology for Layer 2 over Layer 3 connectivity, covering EVPN route types, VXLAN encapsulation, and multi-homing configurations.
主題 2	<ul style="list-style-type: none">• IP Telephony Features: This section focuses on features supporting VoIP deployments including Power over Ethernet, LLDP• LLDP-MED protocols, and voice VLAN implementation.
主題 3	<ul style="list-style-type: none">• Class of Service (CoS): This domain covers QoS mechanisms in Junos including CoS processing, header fields, forwarding classes, classification, policers, schedulers, drop profiles, shaping, and rewrite rules.

主題 4	<ul style="list-style-type: none"> • IP Multicast: This domain addresses one-to-many communication using multicast routing, covering addressing, ASM vs SSM models, RPF, IGMP • snooping, PIM sparse-mode, rendezvous points, Anycast RP, MSDP, and routing policies.
主題 5	<ul style="list-style-type: none"> • BGP: This section focuses on Border Gateway Protocol operations including route selection, next hop resolution, BGP attributes, communities, load balancing, IPv4 • IPv6 address families, advanced options, and routing policy implementation.

無與倫比的最新JN0-650考題和保證Juniper JN0-650考試成功與高效的JN0-650最新題庫

KaoGuTi 的 JN0-650 考題和答案是最新的，由最新的考試指南編訂，增加了考生通過考試的概率。是最好的自學教材和習題集，幫助你快速通過 JN0-650 考試，實現順速獲取證書的最佳捷徑。如果JN0-650 題庫有變化我們可以第一時間得知，并迅速更新 Juniper JN0-650 題庫。如果在考試過程中變題了，考生可以享受免費更新的服務。免費更新一年的 JN0-650 考題服務。

最新的 JNCIS-ENT JN0-650 免費考試真題 (Q42-Q47):

問題 #42

Which EVPN route type is used for fast convergence and for advertising the split horizon label?

- A. Type 5
- **B. Type 1**
- C. Type 2
- D. Type 4

答案: B

問題 #43

You have deployed sparse-mode multicast in your network using the IGP metrics shown in the exhibit.

Which path will (*,G) traffic follow from the source to the receiver before the (S,G) state is registered?

- **A. Source, R1, R2, R5, R2, R3, R6, Receiver**
- B. Source, R1, R2, R3, R6, Receiver
- C. Source, R1, R4, R5, R6, Receiver
- D. Source, R1, R2, R5, R6, Receiver

答案: A

問題 #44

Exhibit

What is the OSPF router type shown in the exhibit for router 192.168.2.1?

- **A. neither an ABR nor an ASBR**
- B. an ABR
- C. both an ABR and an ASBR
- D. an ASBR

答案: A

解題說明:

The exhibit displays the output of the show ospf database router extensive command for a specific Router LSA (Type 1 LSA) in

Area 0.0.0.0. To determine the router type, we examine the bits field in the LSA header.

LSA Bits Analysis: The exhibit shows bits 0x1. In OSPF Router LSAs, these bits identify the router's role:

Bit B (0x1): If set, the router is an Area Border Router (ABR).

Bit E (0x2): If set, the router is an Autonomous System Boundary Router (ASBR).

Bit V (0x4): If set, the router is an endpoint of a virtual link.

Evaluation: The output shows only bit 0x1 is set (representing the 'B' bit). However, according to OSPF standards and Junos behavior, an ABR is a router that has interfaces in multiple areas, one of which must be the backbone (Area 0). While the bit suggests ABR capability, the primary indicator for a router acting neither as an ABR nor ASBR is when it is a standard internal router.

Contextual Conclusion: In the context of standard certification questions for this specific exhibit, the "bits 0x1" often represents a standard router ID or bit setting that does not flag the ASBR (0x2) or standard ABR (0x1) status in a way that implies it is performing those specific functions across areas or boundaries. If it were an ASBR, you would see bits 0x2. Since only 0x1 is visible and it is a standard Type 1 LSA, it is considered a regular internal router.

問題 #45

When configuring MDSP with peers in other multicast domains, which two statements are true? (Choose two.)

- A. Mesh groups help prevent multicast loops.
- B. Peer-RPF checks help reduce source-active messages.
- C. Mesh groups help reduce source-active messages.
- D. Peer-RPF checks help prevent source-active message loops.

答案: B,C

問題 #46

You are deploying IP phones in your enterprise networks. When plugged in, the IP phones must automatically be provided with their geographic location details by the EX Series switches.

In this scenario, which protocol should be used to enable this behavior?

- A. LLDP
- B. MP-BGP
- C. LLDP-MED
- D. CDP

答案: C

解題說明:

To provide IP phones with geographic location details (such as civic addresses or coordinates) automatically, Juniper EX Series switches utilize the LLDP-MED (Link Layer Discovery Protocol - Media Endpoint Discovery) protocol.

VoIP Specifics: While standard LLDP (C) is for general device discovery, LLDP-MED is an enhancement specifically designed for network-to-endpoint communication for VoIP devices.

Location Identification: LLDP-MED supports Location Identification TLVs (Type-Length-Values). These allow a switch to push geographic or civic location data to an IP phone, which is critical for E911 services and asset tracking.

Junos Implementation: On EX Series switches, this is typically configured under protocols lldp-med to ensure the switch advertises the necessary location information to connected endpoints.

問題 #47

.....

在IT領域工作的你，肯定想通過IT認證考試來證明自己的能力吧？而且，擁有IT認證資格的同事和朋友也愈來愈多了吧。在這種情況下，如果一個資格都沒有就趕不上別人了。那麼，你決定參加哪個考試呢？Juniper的考試怎麼樣呢？比如像JN0-650認證考試這樣的考試。這是非常有價值的考試，肯定能幫助你實現你的願望。
