If you opting for this Associate-Cloud-Engineer study engine, it will be a sheer investment. We never boost our achievements, and all we have been doing is trying to become more effective and perfect as your first choice, and determine to help you pass the Associate-Cloud-Engineer preparation questions as efficient as possible. And our high-efficiency of the Associate-Cloud-Engineer Exam Braindumps is well known among our loyal customers. If you study with our Associate-Cloud-Engineer learning materials for 20 to 30 hours, then you will pass the exam easily.

Google Associate Cloud Engineer exam consists of 50 multiple-choice questions that must be completed within two hours. Associate-Cloud-Engineer Exam Tests a candidate's ability to use the Google Cloud Platform to solve real-world problems. The topics covered in the exam include deploying and managing applications, computing, networking, storage, and security. Candidates who pass the exam receive a certification that is valid for two years.

Google Associate-Cloud-Engineer exam is a certification exam designed for individuals who have experience working with Google Cloud Platform. Associate-Cloud-Engineer exam is intended to validate an individual's ability to deploy, monitor, and maintain cloud solutions using Google Cloud Platform. Associate-Cloud-Engineer exam is designed for those who have one or more years of experience working with GCP and are looking to validate their skills and knowledge.

The Google Associate Cloud Engineer Exam certification exam validates the candidate's ability to design, develop, deploy, and operate applications and infrastructure on the Google Cloud Platform. It also demonstrates the candidate's understanding of Google Cloud technologies, including Google Compute Engine, Google Kubernetes Engine, Google Cloud Storage, Google Cloud SQL, and Google Cloud Identity and Access Management. By earning this certification, candidates can showcase their expertise in Google Cloud technologies and gain recognition in the industry as a skilled Google Cloud professional.

Free PDF Quiz Google - Associate-Cloud-Engineer Useful Test Question

Obtaining a Associate-Cloud-Engineer certificate can prove your ability so that you can enhance your market value. However, it is well known that obtaining such a Associate-Cloud-Engineer certificate is very difficult for most people, especially for those who always think that their time is not enough to learn efficiently. However, our Associate-Cloud-Engineer test prep take full account of your problems and provide you with reliable services and help you learn and improve your ability and solve your problems effectively. Once you choose our Associate-Cloud-Engineer Quiz guide, you have chosen the path to success. We are confident and able to help you realize your dream. A higher social status and higher wages will not be illusory.

Google Associate Cloud Engineer Exam Sample Questions (Q329-Q334):

NEW QUESTION # 329

You need to select and configure compute resources for a set of batch processing jobs. These jobs take around 2 hours to complete and are run nightly. You want to minimize service costs. What should you do?

- A. Select Compute Engine. Use VM instance types that support micro bursting.
- B. Select Google Kubernetes Engine. Use a single-node cluster with a small instance type.
- C. Select Google Kubernetes Engine. Use a three-node cluster with micro instance types.
- **D. Select Compute Engine. Use preemptible VM instances of the appropriate standard machine type.**

Answer: D

Explanation:

If your apps are fault-tolerant and can withstand possible instance preemptions, then preemptible instances can reduce your Compute Engine costs significantly. For example, batch processing jobs can run on preemptible instances. If some of those instances stop during processing, the job slows but does not completely stop. Preemptible instances complete your batch processing tasks without placing additional workload on your existing instances and without requiring you to pay full price for additional normal instances.

NEW QUESTION # 330

You are creating a Google Kubernetes Engine (GKE) cluster with a cluster autoscaler feature enabled. You need to make sure that each node of the cluster will run a monitoring pod that sends container metrics to a third-party monitoring solution. What should you do?

- A. Deploy the monitoring pod in a StatefulSet object.
- B. Reference the monitoring pod in a cluster initializer at the GKE cluster creation time.
- C. Reference the monitoring pod in a Deployment object.
- **D. Deploy the monitoring pod in a DaemonSet object.**

Answer: D

Explanation:

<https://cloud.google.com/kubernetes-engine/docs/concepts/daemonset>

https://cloud.google.com/kubernetes-engine/docs/concepts/daemonset#usage_patterns DaemonSets attempt to adhere to a one-Pod-per-node model, either across the entire cluster or a subset of nodes. As you add nodes to a node pool, DaemonSets automatically add Pods to the new nodes as needed.

In GKE, DaemonSets manage groups of replicated Pods and adhere to a one-Pod-per-node model, either across the entire cluster or a subset of nodes. As you add nodes to a node pool, DaemonSets automatically add Pods to the new nodes as needed. So, this is a perfect fit for our monitoring pod.

Ref: <https://cloud.google.com/kubernetes-engine/docs/concepts/daemonset> DaemonSets are useful for deploying ongoing background tasks that you need to run on all or certain nodes, and which do not require user intervention. Examples of such tasks include storage daemons like ceph, log collection daemons like fluentd, and node monitoring daemons like collectd. For example, you could have DaemonSets for each type of daemon run on all of your nodes. Alternatively, you could run multiple DaemonSets for a single type of daemon, but have them use different configurations for different hardware types and resource needs.

NEW QUESTION # 331

You have a development project with appropriate IAM roles defined. You are creating a production project and want to have the same IAM roles on the new project, using the fewest possible steps. What should you do?

- A. In the Google Cloud Platform Console, use the 'create role' functionality and select all applicable permissions.
- **B. Use gcloud iam roles copy and specify your organization as the destination organization.**
- C. In the Google Cloud Platform Console, use the 'create role from role' functionality.
- D. Use gcloud iam roles copy and specify the production project as the destination project.

Answer: B

Explanation:

Reference:

<https://cloud.google.com/sdk/gcloud/reference/iam/roles/copy>

NEW QUESTION # 332

Which of the following is a valid use case for Flow Logs?

- A. Network forensics.
- B. Proxying SSL traffic.
- C. Serving as a UDP relay.
- D. Blocking instances from communicating over certain ports.

Answer: A

NEW QUESTION # 333

All development (dev) teams in your organization are located in the United States. Each dev team has its own Google Cloud project. You want to restrict access so that each dev team can only create cloud resources in the United States (US). What should you do?

- A. Create an organization to contain all the dev projects. Create an Identity and Access Management (IAM) policy to limit the resources in US regions.
- B. Create a folder to contain all the dev projects. Create an organization policy to limit resources in US locations.
- C. Create an Identity and Access Management (IAM) policy to restrict the resources locations in all dev projects. Apply the policy to all dev roles.
- D. Create an Identity and Access Management (IAM) policy to restrict the resources locations in the US. Apply the policy to all dev projects.

Answer: D

NEW QUESTION # 334

.....

Our company conducts our business very well rather than unprincipled company which just cuts and pastes content from others and sell them to exam candidates. By virtue of our Associate-Cloud-Engineer practice materials, many customers get comfortable experiences of Whole Package of Services and of course passing the Associate-Cloud-Engineer Study Guide successfully. As to some exam candidate are desperately eager for useful Associate-Cloud-Engineer actual tests, our products help you and other customer who are having an acute shortage of efficient practice materials.
