

# New CCSE-204 Learning Materials - Reliable CCSE-204 Test Preparation

Our CCSE-204 learning materials were developed based on this market demand. More and more people are aware of the importance of obtaining a certificate. There are more and more users of CCSE-204 practice guide. Our products can do so well, the most important thing is that the quality of CCSE-204 exam questions is very good, and can be continuously improved according to market demand. And you can look at the data on our website, the hot hit of our CCSE-204 training guide can prove how popular it is!

As you know, we are now facing very great competitive pressure. We need to have more strength to get what we want, and CCSE-204 exam dumps may give you these things. After you use our study materials, you can get CCSE-204 certification, which will better show your ability, among many competitors, you will be very prominent. The 99% pass rate is the proud result of our study materials. If you join, you will become one of the 99%. I believe that pass rate is also a big criterion for your choice of products, because your ultimate goal is to obtain CCSE-204 Certification. In CCSE-204 exam dumps, you can do it.

## **Free PDF Quiz CCSE-204 - High Pass-Rate New CrowdStrike Certified SIEM Engineer Learning Materials**

We have applied the latest technologies to the design of our CrowdStrike CCSE-204 test prep not only on the content but also on the displays. As a consequence you are able to keep pace with the changeable world and remain your advantages with our CrowdStrike Certified SIEM Engineer CCSE-204 Training Materials.

## CrowdStrike Certified SIEM Engineer Sample Questions (Q54-Q59):

### NEW QUESTION # 54

Which field is compliant with CrowdStrike Parsing Standard (CPS)?

- A. #event.dataset
- B. Parser.type
- C. #event.trigger
- D. Parser.name

**Answer: A**

Explanation:

The correct answer is B. #event.dataset .

CrowdStrike's CPS documentation explicitly lists #event.dataset as one of the CPS-compliant parser tags.

The CPS migration documentation also repeats that CPS-compliant parsers use tags for fields including #ecs.version , #event.dataset , and #event.kind .

Why the other options are incorrect:

Parser.type and Parser.name are not listed as CPS-compliant tags in the CPS standard.

#event.trigger is also not listed among the CPS-compliant fields/tags.

Therefore, the only CPS-compliant option given is #event.dataset .

### NEW QUESTION # 55

Which default role will maintain least privilege and allow for creation and management of parsers?

- A. NG SIEM Security Lead
- B. NG SIEM Analyst
- C. NG SIEM Administrator
- D. NG SIEM Analyst - Read Only

**Answer: A**

Explanation:

The correct answer is B. NG SIEM Security Lead . Parser creation and management requires elevated SIEM content and configuration capabilities that go beyond standard analyst activity, but it does not require the full breadth of platform-wide administrative control. NG SIEM Security Lead is the default role that best fits parser management while still maintaining least privilege compared with NG SIEM Administrator . NG SIEM Analyst and NG SIEM Analyst - Read Only do not provide the content-management level access needed for parser administration. CrowdStrike's SIEM role separation supports using the Security Lead role for advanced SIEM content configuration tasks.

### NEW QUESTION # 56

A Falcon Log Collector has been configured with 4 sinks of type memory, each having a queue size of 2GB.

What is the minimum memory requirement produced by this configuration?

- A. 12 GB
- B. 10 GB
- C. 9 GB
- D. 8 GB

**Answer: C**

Explanation:

The correct answer is A. 9 GB .

CrowdStrike's Falcon LogScale Collector sizing documentation states that memory requirement for memory queues is linearly proportional to the number of sinks plus a constant baseline requirement of 1 GB .

The documentation gives a worked example: 1 GB baseline + queue sizes for each sink .

For this question:

\* Number of sinks = 4

\* Queue size per sink = 2 GB

\* Total sink memory =  $4 \times 2 \text{ GB} = 8 \text{ GB}$

\* Add baseline memory = 1 GB

So the minimum memory requirement is:

$8 \text{ GB} + 1 \text{ GB} = 9 \text{ GB}$ .

That is why:

\* A. 9 GB is correct

\* B. 12 GB , C. 10 GB , and D. 8 GB are incorrect because they do not match CrowdStrike's documented sizing formula for memory queues.

### NEW QUESTION # 57

What dashboard presents a view of third-party data ingestion over the past 30 days?

- A. Falcon Flex Dashboard
- B. Sensor Usage Dashboard
- C. Sensor Subscription Dashboard
- **D. Next-Gen SIEM Connector Dashboard**

**Answer: D**

Explanation:

The correct answer is D. Next-Gen SIEM Connector Dashboard .

CrowdStrike describes the Falcon Next-Gen SIEM Connector Dashboard as the place to understand the status and volume of data ingestion for third-party sources. This matches the question's requirement for a dashboard showing third-party ingestion visibility.

The other options are not aimed at third-party SIEM connector ingestion monitoring:

\* Sensor Usage Dashboard relates to Falcon sensor usage, not connector-based third-party ingestion.

\* Sensor Subscription Dashboard is about licensing/subscription counts.

\* Falcon Flex Dashboard is related to subscription consumption and commercial usage, not connector ingestion telemetry.

### NEW QUESTION # 58

You are reviewing a lookup file to determine whether an event was successfully parsed during ingestion.

Which metadata field indicates the event's parsing status?

- A. @rawstring
- **B. @event\_parsed**
- C. @error\_msg
- D. @ingesttimestamp

**Answer: B**

Explanation:

The correct answer is D. @event\_parsed .

CrowdStrike LogScale's parser error documentation explicitly states that @event\_parsed indicates whether the event has been successfully parsed during ingest . The same documentation says it is set to false when there was a parsing error. That exactly matches the question.

Why the other options are incorrect:

@ingesttimestamp represents the time the platform ingested the event, not whether parsing succeeded.

@rawstring contains the original raw event data. @error\_msg can contain error details, but it is not the primary field that directly indicates parse success or failure. The field CrowdStrike documents for parsing status is @event\_parsed .

### NEW QUESTION # 59

.....

This way you can save money even if CrowdStrike CCSE-204 introduces fresh CrowdStrike CCSE-204 exam updates. So why are you delaying? Purchase the CrowdStrike CCSE-204 Preparation material to get certified on the first attempt.
