

# Juniper JN0-336 Questions Are Designed By Experts

P.S. Free & New JN0-336 dumps are available on Google Drive shared by FreeCram: <https://drive.google.com/open?id=1uL34pdX0017vUs-uReiruSnJGGvS8mjR>

As candidates don't know what to expect on the Security, Specialist (JNCIS-SEC) exam, and they have to prepare for the unknown. In this case, candidates can take Juniper JN0-336 practice test to get help with their Juniper JN0-336 exam preparation. The real JN0-336 exam dumps by FreeCram give them an idea of the Security, Specialist (JNCIS-SEC) JN0-336 Exam structure so that they can prepare accordingly. The Juniper JN0-336 PDF Questions and practice tests by FreeCram play a big role in your Juniper JN0-336 exam success.

Even in a globalized market, the learning material of similar JN0-336 doesn't have much of a share, nor does it have a high reputation or popularity. In this dynamic and competitive market, the JN0-336 study materials can be said to be leading and have absolute advantages. In order to facilitate the user real-time detection of the learning process, we JN0-336 practice materials provided by the questions and answers are all in the past. It is closely associated, as our experts in constantly update products every day to ensure the accuracy of the problem, so all JN0-336 practice materials are high accuracy.

## **Pass Guaranteed Latest JN0-336 - Interactive Security, Specialist (JNCIS-SEC) Questions**

Facing the incoming JN0-336 exam, you may feel stained and anxious, suspicious whether you could pass the exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark. Preparation of exam without effective materials is just like a soldier without gun. You will be feeling be counteracted the effect of tension for our JN0-336 practice dumps can relieve you of the anxious feelings.

## **Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q42-Q47):**

### **NEW QUESTION # 42**

You want to set up JSA to collect network traffic flows from network devices on your network. Which two statements are correct when performing this task? (Choose two.)

- A. Statistical sampling decreases event correlation accuracy.
- B. Superflows reduce traffic licensing requirements.
- C. Statistical sampling increases processor utilization
- D. BGP FlowSpec is used to collect traffic flows from Junos OS devices.

**Answer: A,B**

Explanation:

Statistical sampling involves collecting a representative subset of data rather than examining all traffic.

While this method decreases processor utilization by reducing the volume of data that must be analyzed and stored, it can also lead to decreased accuracy in event correlation because not all events are captured.

Superflows in JSA are aggregated flow records that represent summaries of multiple flow records. This aggregation reduces the number of flows that need to be processed and stored, which can help in managing licensing requirements related to the volume of traffic being analyzed, especially in environments with high traffic volumes.

#### NEW QUESTION # 43

You are configuring logging for a security policy.

In this scenario, in which two situations would log entries be generated? (Choose two.)

- A. every 60 seconds
- B. every 10 minutes
- C. at session close
- D. at session initialization

**Answer: C,D**

Explanation:

Log entries would be generated in two situations: at session initialization and at session close. At session initialization, the log entry would include details about the connection, such as the source and destination IP addresses, the service being used, and the action taken by the security policy. At session close, the log entry would include details about the connection, such as the duration of the session, the bytes sent/received, and the action taken by the security policy. For more information, you can refer to the Juniper Security documentation at

[https://www.juniper.net/documentation/en\\_US/junos/topics/reference/configuration-statement/security-log-co](https://www.juniper.net/documentation/en_US/junos/topics/reference/configuration-statement/security-log-co)

#### NEW QUESTION # 44

Which method does the IoT Security feature use to identify traffic sourced from IoT devices?

- A. The SRX Series device streams metadata from the IoT device transit traffic to Juniper ATP Cloud Juniper ATP Cloud.
- B. The SRX Series device identifies IoT devices from metadata extracted from their transit traffic.
- C. The SRX Series device identifies IoT devices using their MAC address.
- D. The SRX Series device streams transit traffic received from the IoT device to Juniper ATP Cloud.

**Answer: B**

Explanation:

The metadata is used to identify the type of device, its associated activities and its threat profile. This information is used to determine the appropriate security policy for the device. For more information on IoT Security, please refer to the Juniper Security, Specialist (JNCIS-SEC) study guide.

#### NEW QUESTION # 45

You want to show tabular data for operational mode commands.

In this scenario, which logging parameter will provide this function?

- A. permit
- B. session-close
- C. session-init
- D. count

**Answer: D**

Explanation:

The logging parameter that will provide the function of showing tabular data for operational mode commands is count. The count parameter displays the number of packets and bytes that match a security policy and the action taken by the policy. The count parameter can be used with the show security policies hit-count command to display the policy counters in a tabular format. The count parameter can also be used with the show security flow session command to display the session counters in a tabular format. Reference: = show security policies hit-count, show security flow session

#### **NEW QUESTION # 46**

Which two statements are correct about chassis clustering? (Choose two.)

- A. A system reboot is required to activate changes to the cluster.
- B. The node ID is used to identify each device in the chassis cluster.
- C. The node ID value ranges from 1 to 255.
- D. The cluster ID is used to identify each device in the chassis cluster.

**Answer: A,B**

Explanation:

In chassis clustering, the node ID is indeed used to uniquely identify each device within the cluster. This allows for individual addressing and management of devices within the cluster configuration, which is crucial for operations and maintenance. Typically, activating changes that involve chassis clustering configuration, such as setting or changing the node ID or forming a new cluster, requires a reboot of the devices. This ensures that all configuration changes are properly applied and that the devices can synchronize their states as part of the cluster.

#### **NEW QUESTION # 47**

.....

These Security, Specialist (JNCIS-SEC) (JN0-336) exam questions are a one-time investment to clear the JN0-336 test in a short time. These JN0-336 exam questions eliminate the need for candidates to study extra or irrelevant content, allowing them to complete their Juniper test preparation quickly. By avoiding unnecessary information, you can save time and crack the Security, Specialist (JNCIS-SEC) (JN0-336) certification exam in one go. Check out the features of the three formats.
