EAEP2201 Exam Quiz - EAEP2201 Test Duration

Our EAEP2201 exam prep can allow users to use the time of debris anytime and anywhere to study and make more reasonable arrangements for their study and life. For there are three versions of the EAEP2201 exam questions: the PDF, Software and APP online. Though the content is the same, the displays are different to meet all kinds of the customers' needs. Choosing our EAEP2201 simulating materials is a good choice for you, and follow our step, just believe in yourself, you can pass the EAEP2201 exam perfectly!

Esri Enterprise Administration Professional 2201 Sample Questions (Q16-Q21):

NEW QUESTION # 16

In a multi-machine ArcGIS Server site, the following is observed:

- * Random services missing on one server but reappear later
- * Intermittent service failures

- * Warnings and severe errors like:
 - * Failed to write heartbeat
 - * Error synchronizing with config store
 - * Failed to return all folder configurations
 - * Failed to return all services configurations in folder
- What should the administrator review?

- **A. Specification for the file share location**
- B. Network DNS cache
- C. ArcGIS Server patches applied
- D. ArcGIS Server virtual machine resources

Answer: A

Explanation:

These errors point to problems accessing the configuration store, which is commonly stored on a shared file location across ArcGIS Server machines. Intermittent access, latency, or I/O issues with the shared drive can cause synchronization failures and service visibility problems.

From Esri documentation:

"If ArcGIS Server cannot reliably access the configuration store, errors such as heartbeat failure, sync issues, and missing service configurations may occur. Always ensure the shared file location is on a reliable, supported file system with proper permissions and stability."

* Option A (VM resources) might impact general performance but not sync reliability.

* Option C (patches) is important but doesn't fix shared drive instability.

* Option D is not relevant in this context.

NEW QUESTION # 17

A GIS administrator must automate certain data workflows and administrative tasks in ArcGIS Enterprise.

The administrator must meet several requirements:

- * The processes and methods must be well and thoroughly documented
 - * An option must be provided to modify the processes on the fly
 - * Scripts and processes must be shared to different individuals throughout the ArcGIS Enterprise organization
- Which ArcGIS Server role should be used to meet these requirements?

- A. ArcGIS Notebook Server
- **B. ArcGIS Workflow Manager Server**
- C. ArcGIS GeoEvent Server

Answer: B

NEW QUESTION # 18

An organization recently upgraded Portal for ArcGIS. The organization must reduce the number of named users to the maximum allowed by the authorization file and delete members in bulk.

Which action should the administrator perform?

- A. Use command line utilities
- B. Delete users using the Member tab
- **C. Batch delete users with ArcPy**

Answer: C

NEW QUESTION # 19

An organization has a requirement to geocode crime incidents from a CSV uploaded to the ArcGIS Enterprise portal. How should the organization configure their ArcGIS Server site to meet this requirement?

- **A. As the hosting server**
- B. As an ArcGIS GeoEvent Server

- C. With a registered geodatabase

Answer: A

Explanation:

To enable geocoding of addresses from CSV files uploaded to the ArcGIS Enterprise portal, the organization must designate a federated ArcGIS Server site as the hosting server. This hosting server must have a relational data store configured. Once set up, the portal can utilize a geocode utility service to process the addresses. This configuration allows users to map addresses from CSV files added to the portal.

Reference Source: ArcGIS Enterprise documentation on configuring the portal to geocode addresses

NEW QUESTION # 20

An organization is implementing a disaster recovery strategy for an ArcGIS Enterprise deployment for custom cached basemaps. Which action should the organization perform?

- A. Run the webgisdr disaster recovery utility tool
- B. Use the ArcGIS Data Store backup utility
- C. Make backup copies of all cache folder directories

Answer: C

Explanation:

Custom cached basemaps are stored as tile cache files on disk and are not included in backups created by the webgisdr tool or the ArcGIS Data Store backup utility. Therefore, to ensure these basemaps can be restored in the event of a disaster, it's essential to manually back up the cache directories where these tiles are stored.

This involves copying the cache folders to a secure backup location and ensuring they are kept in sync with any updates made to the basemaps.

The webgisdr tool (Option A) is used for backing up and restoring the ArcGIS Enterprise configuration and content but does not include custom tile caches. The ArcGIS Data Store backup utility (Option B) is used for backing up hosted feature layers and other data managed by the ArcGIS Data Store, not custom cached basemaps.
