Are you still worried about the exam? Don't worry! Our Managing-Cloud-Security exam torrent can help you overcome this stumbling block during your working or learning process. Under the instruction of our Managing-Cloud-Security test prep, you are able to finish your task in a very short time and pass the exam without mistakes to obtain the WGU certificate. We will tailor services to different individuals and help them take part in their aimed exams after only 20-30 hours practice and training. Moreover, we have experts to update Managing-Cloud-Security Quiz torrent in terms of theories and contents according to the changeable world on a daily basis, which can ensure that you are not falling behind of others by some slight knowledge gaps.

BraindumpsPrep aims to assist its clients in making them capable of passing the WGU Managing-Cloud-Security certification exam with flying colors. It fulfills its mission by giving them an entirely free WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) demo of the dumps. Thus, this demonstration will enable them to scrutinize the quality of the WGU Managing-Cloud-Security study material.

WGU Believes in Their Real Managing-Cloud-Security Exam Dumps

Though studies have shown that most people over a period of time only to the memory of seven information plates, in the qualification exam review, a lot of exam content miscellaneous and, therefore, get the test Managing-Cloud-Security certification requires the user to have extremely high concentration will all test sites in mind, and this is definitely a very difficult. Our Managing-Cloud-Security learning questions can successfully solve this question for you for the content are exactly close to the changes of the real Managing-Cloud-Security exam.

WGU Managing Cloud Security (JY02) Sample Questions (Q182-Q187):

NEW QUESTION # 182

Which risk mitigation technique will compensate a cloud service customer for failures on the part of the cloud service provider?

- A. Recovery time objective
- B. Data protection requirements
- C. Suspension of service clause
- **D. SLA penalties**

Answer: D

Explanation:

Service level agreement (SLA) penalties are a risk mitigation technique that compensates customers for failures by the cloud service provider. Managing Cloud principles explain that SLAs define performance commitments such as availability, response time, and reliability.

When a provider fails to meet these commitments, SLA penalties-often in the form of service credits or financial compensation-are applied. While penalties do not prevent failures, they provide accountability and partial financial remediation.

Recovery time objectives define recovery goals, data protection requirements address security controls, and suspension clauses govern service termination. None of these compensate customers directly. Therefore, SLA penalties are the correct mitigation technique.

NEW QUESTION # 183

Which characteristic could affect the audit process for a customer of a cloud service provider?

- A. Limits for up-time of the hosted system
- B. Utilization constraints on the bandwidth imposed by the cloud service vendor
- C. Restrictions on the data storage options offered by the cloud service provider
- **D. Lack of physical access to the cloud infrastructure**

Answer: D

Explanation:

The lack of physical access to cloud infrastructure significantly affects the audit process for cloud customers. Managing Cloud guidance explains that customers do not have direct access to cloud data centers, servers, or networking equipment, which limits their ability to perform traditional on-site audits.

As a result, customers must rely on third-party audit reports, certifications, and attestations provided by the cloud service provider. This changes how evidence is collected and verified during audits and requires auditors to assess assurance reports instead of physical inspections.

Bandwidth constraints, uptime limits, and storage options impact performance and architecture decisions but do not directly affect audit methodology. Therefore, the absence of physical access is the primary audit- related characteristic.

NEW QUESTION # 184

An organization's security architects determined that all authentication and authorization requests need to be validated before any employee can access corporate resources. Because of this, the organization needs to implement a system that stores and manages the employees' credential information and then validates any requests sent. Which system would allow the organization to meet the architects' requirements?

- A. Zero trust
- B. Bastion host
- **C. Identity provider (IdP)**
- D. Hardware security module (HSM)

Answer: C

Explanation:

An Identity Provider (IdP) is a system that stores and manages identity information and validates authentication and authorization requests. IdPs are critical in cloud and hybrid environments, supporting protocols such as SAML, OAuth, and OpenID Connect for federated access.

An HSM manages encryption keys, not identities. Zero Trust is a security philosophy requiring continuous verification, but the system that enforces authentication is the IdP. A bastion host provides secure administrative access but does not manage identity. By using an IdP, organizations centralize credential management, enforce multifactor authentication, and integrate with Single Sign-On (SSO). This reduces password fatigue, increases security, and ensures consistent access control policies across applications and services.

NEW QUESTION # 185

Which regulation provides a guide for implementing the risk management framework?

- A. PCI-DSS
- B. ISO 31000:2009
- **C. NIST SP 800-37**
- D. ISO 27001

Answer: C

Explanation:

NIST SP 800-37 provides a detailed guide for implementing the Risk Management Framework (RMF).

Managing Cloud documentation explains that this framework offers a structured process for integrating security and risk management into system development and operational activities.

NIST SP 800-37 outlines steps such as categorizing systems, selecting and implementing security controls, assessing effectiveness, authorizing systems, and continuous monitoring. This lifecycle-based approach helps organizations manage risk in cloud and traditional environments consistently.

ISO 31000 provides general risk management principles, ISO 27001 focuses on information security management systems, and PCI DSS is a compliance standard. Therefore, NIST SP 800-37 is the correct guide for implementing the RMF.

NEW QUESTION # 186

An organization negotiates a new contract with a cloud provider and wants to ensure that its critical business data is protected if the cloud provider goes out of business. For this reason, the organization wants the cloud provider to store a copy of the organization's data with a neutral third party, which would release the data in case the provider is unable to meet its obligations. Which type of provision should be included in the contract to ensure this?

- **A. Escrow**
- B. Offboarding
- C. Indemnification
- D. Encryption

Answer: A

Explanation:

The correct contractual safeguard is an escrow agreement. Data escrow involves storing critical data or software with a neutral third party, which can release it to the customer if the provider fails to meet obligations, such as bankruptcy or service discontinuation.

Indemnification covers liability, offboarding manages termination processes, and encryption secures data but does not ensure availability if the provider disappears.

Escrow provisions protect business continuity by guaranteeing customer access to data regardless of provider viability. They are especially important for organizations handling mission-critical workloads or long-term regulatory obligations in the cloud.

NEW QUESTION # 187

.....

One thing has to admit, more and more certifications you own, it may bring you more opportunities to obtain better job, earn more salary. This is the reason that we need to recognize the importance of getting the test Managing-Cloud-Security certifications. More

qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. Therefore, the Managing-Cloud-Security Guide Torrent can help users pass the qualifying examinations that they are required to participate in faster and more efficiently.

Latest Managing-Cloud-Security Dumps Book: <https://www.briandumpsprep.com/Managing-Cloud-Security-prep-exam-braindumps.html>

If you are urgent to pass Managing-Cloud-Security actual test, Managing-Cloud-Security verified study material will be the best preparation materials for you, WGU Free Managing-Cloud-Security Brain Dumps They are widely read and accepted by people, So it will not wrong to say that, WGU Managing-Cloud-Security Exam Dumps is the best study material for preparation of your exam, So it is convenient for you to have a good understanding of our Managing-Cloud-Security exam questions before you decide to buy our Managing-Cloud-Security training materials.

Nowadays increasing people attach great importance to different kinds of certification exam, especially Managing-Cloud-Security, Fix problems and keep your computer running fast.

If you are urgent to pass Managing-Cloud-Security Actual Test, Managing-Cloud-Security verified study material will be the best preparation materials for you, They are widely read and accepted by people.

Free PDF High Pass-Rate WGU - Managing-Cloud-Security - Free WGU Managing Cloud Security (JY02) Brain Dumps

So it will not wrong to say that, WGU Managing-Cloud-Security Exam Dumps is the best study material for preparation of your exam, So it is convenient for you to have a good understanding of our Managing-Cloud-Security exam questions before you decide to buy our Managing-Cloud-Security training materials.
