SAP Certified Associate - Security Administrator Sample Questions (Q53-Q58):

NEW QUESTION # 53

In S/4HANA on-premise, which of the following combinations is required to grant a business user access to data from a Core Data Services (CDS) view using the standard ABAP authorization concept and authorization object S_RS_AUTH?

- A. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role containing the CDS role and access conditions based upon authorization object S_RS_AUTH, assignment of the PFCG role to the business user.
- B. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role containing the CDS role and access conditions based upon authorization object S_RS_AUTH, assignment of the PFCG role and the CDS role to the business user.
- C. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role with authorization for object S_RS_AUTH and assignment of the PFCG role, the CDS role to the business user.
- D. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role with authorization for object S_RS_AUTH, assignment of the PFCG role to the business user.

Answer: A

Explanation:

To grant a business user access to data from a Core Data Services (CDS) view in SAP S/4HANA on-premise using the standard ABAP authorization concept and S_RS_AUTH, the correct combination includes a CDS role with access conditions based on S_RS_AUTH, a PFCG role containing the CDS role and access conditions based on S_RS_AUTH, and assignment of the PFCG role to the business user. The CDS role defines data access restrictions at the CDS view level, using S_RS_AUTH to enforce specific conditions, such as filtering data by organizational units. The PFCG role incorporates this CDS role and includes S_RS_AUTH authorizations, ensuring that the user's permissions align with both the CDS view's restrictions and ABAP authorization checks. Assigning only the PFCG role to the user simplifies administration, as the CDS role is embedded within it. Options A and C incorrectly suggest assigning the CDS role directly to the user, which is not standard practice, and option D omits the CDS role's integration into the PFCG role. This combination ensures secure and efficient access to CDS view data.

NEW QUESTION # 54

If you want to evaluate catalog menu entries and authorization default values of IWSG and IWSV applications, which SUIM reports would you use? Note: There are 2 correct answers to this question.

- A. Search Startable Applications in Roles
- B. Roles By Transaction Assignment in Menu
- C. Search Applications in Roles
- D. Roles By Authorization Object

Answer: A,C

Explanation:

To evaluate catalog menu entries and authorization default values for IWSG and IWSV applications, use the following SUIM reports:

- * Search Startable Applications in Roles (A):
 - * Lists applications that can be started within a role, aiding in evaluating role scope.
 - * Search Applications in Roles (B):
 - * Provides insights into which applications are available in specific roles, helping ensure proper authorization configuration.
- SAP Security References:
- * SAP Documentation: SUIM Reports Overview
 - * SAP Help Portal: Role and Authorization Management in SUIM

NEW QUESTION # 55

In the administration console of the Cloud Identity Services, for which system type can you define both read and write transformations?

- A. Target systems
- B. Source systems
- C. Proxy systems

Answer: A

NEW QUESTION # 56

What are some security safeguards categories? Note: There are 3 correct answers to this question.

- A. Technical
- B. Access Control
- C. Physical
- D. Financial
- E. Organizational

Answer: A,C,E

Explanation:

Security safeguards in SAP systems are categorized to address various aspects of system protection. Physical safeguards involve securing physical infrastructure, such as data centers and hardware, to prevent unauthorized access or damage. Organizational safeguards include policies, procedures, and training to ensure that personnel follow security best practices, fostering a culture of

compliance. Technical safeguards encompass tools and technologies, such as encryption, firewalls, and authorization controls, to protect system data and processes from cyber threats. These categories collectively form a comprehensive security framework. Access Control, while critical, is a subset of technical safeguards rather than a standalone category, and Financial safeguards are not a recognized category in SAP's security framework, as they pertain more to business processes than security measures. These distinctions ensure a holistic approach to securing SAP environments.

NEW QUESTION # 57

If you want to evaluate catalog menu entries and authorization default values of IWSG and IWSV applications, which SUIM reports would you use? Note: There are 2 correct answers to this question.

- A. Search Startable Applications in Roles
- B. Roles By Transaction Assignment in Menu
- C. Search Applications in Roles
- D. Roles By Authorization Object

Answer: A,C

NEW QUESTION # 58

.....
