Mock AP-219 Exam & Certificate AP-219 Exam

During the operation of the AP-219 study materials on your computers, the running systems of the AP-219 study guide will be flexible, which saves you a lot of troubles and help you concentrate on study. If you try on it, you will find that the operation systems of the AP-219 Exam Questions we design have strong compatibility. So the running totally has no problem. And you can free download the demos of the AP-219 practice engine to have a experience before payment.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which three components can be used to modify the user experience in the Order Summary detail page?

- A. Related List - Double
- B. Accordion
- C. Related List-Single
- D. Tabs

Answer: B,C,D

Explanation:

Three components that can be used to modify the user experience in the Order Summary detailpage are:

Tabs. Tabs are a type of component that allow users to switch between different views or subpages on a record page. Tabs can contain other components, such as charts, reports, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize tabs on the Order Summary detail page to give users more options and flexibility.

Accordion. Accordion is a type of component that allow users to expand and collapse sections of a record page. Accordion can contain other components, such as fields, related lists, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize accordion on the Order Summary detail page to give users more control and visibility.

Related List-Single. Related List-Single is a type of component that displays a single related list for a record. A related list is a list of records that are linked to another record by a relationship field, such as lookup or master-detail. The administrator can use the Lightning App Builder to add and customize related list-single on the Order Summary detail page to give users more access andcontext.

NEW QUESTION # 28

How can an administrator localize screens in the Order Management flows?

- A. Add the Language Selector component at the start of the flow so users can change the language
- B. Create text localization variables in the flow

- C. Create a copy of the flow with hard-coded text in the desired language
- D. Enable localization for the flow and modify the label's value to match the desired language

Answer: B

NEW QUESTION # 29

Which two practices are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects?

- A. The names must be an exact match
- B. The names must only contain letters and underscores
- C. The types must be an exact match (i.e. String to String)
- D. The types must match within reason

Answer: A,D

Explanation:

Two practices that are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects are: The types must match within reason. The data type of the custom attribute in Order Management must match or be compatible with the data type of the corresponding attribute in the external system, such as B2C Commerce or B2B Commerce. For example, if the attribute is a string in B2C Commerce, it must also be a string in Order Management.

The names must be an exact match. The name of the custom attribute in Order Management must be exactly the same as the name of the corresponding attribute in the external system, including capitalization and punctuation. For example, if the attribute is named "kitItem" in B2C Commerce, it must also be named "kitItem" in Order Management.

NEW QUESTION # 30

An administrator is encountering errors when reusing a composite API call to load test orders via the Workbench. What are three possible causes of this issue?

- A. The number of subrequests in the JSON query exceeds the 20 subrequest limit
- B. The administrator has logged into the wrong environment in Workbench
- C. Record IDs used within the request are incorrect
- D. The administrator is creating multiple objects in a single JSON query
- E. The administrator has duplicate Product SKUs in the JSON query

Answer: A,C,E

Explanation:

Three possible causes of this issue are:

The administrator has duplicate Product SKUs in the JSON query. A Product SKU is a unique identifier for a product that is used to track inventory and sales. A Product SKU must be unique within an org, and it cannot be duplicated in a composite API call. If the administrator has duplicate Product SKUs in the JSON query, it will cause an error when loading test orders via the Workbench.

The number of subrequests in the JSON query exceeds the 20 subrequest limit. A subrequest is a single HTTP request that is part of a composite API call. A composite API call can contain up to 20 subrequests in a single JSON body. If the administrator has more than 20 subrequests in the JSON query, it will cause an error when loading test orders via the Workbench.

Record IDs used within the request are incorrect. A record ID is a unique identifier for a record that is used to reference and manipulate data in Salesforce. A record ID must be valid and exist in the org, and it must match the data type and format of the corresponding field. If the administrator has incorrect record IDs in the JSON query, such as using 15-character IDs instead of 18-character IDs, or using IDs from a different org, it will cause an error when loading test orders via the Workbench.

NEW QUESTION # 31

Which data type is the Status field on an Order Summary object?

- A. Picklist
- B. String
- C. Text
- D. Number

Answer: A

Explanation:

The Status field on an Order Summary object is a picklist data type. A picklist is a field that allows users to select one value from a predefined list of values. The Status field on an Order Summary object indicates the current state of the order, such as Draft, Activated, Completed, or Cancelled. The values for the Status field are defined in the OrderStatus picklist field on the Order object. Reference: Order Management Objects, [Picklist Fields]

NEW QUESTION # 32
