

Authorized NSK300 Exam Dumps - Reliable NSK300 Test Topics

What's more, part of that BraindumpStudy NSK300 dumps now are free: https://drive.google.com/open?id=1bsqMdCIbDB-_wC-rLHRSb0X1rOLikmpf

You can also trust Netskope NSK300 exam questions and start Netskope NSK300 exam preparation. With the Netskope NSK300 valid dumps you can get an idea about the format of real Netskope NSK300 Exam Questions. These latest Netskope NSK300 questions will help you pass the Netskope Certified Cloud Security Architect NSK300 exam.

Netskope NSK300 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Netskope Platform Monitoring: This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.
Topic 2	<ul style="list-style-type: none">Netskope Platform Management: This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.
Topic 3	<ul style="list-style-type: none">Cloud Security Solutions: This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope's architecture protects users, applications, and data across cloud services.
Topic 4	<ul style="list-style-type: none">Netskope Platform Troubleshooting: This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.

Topic 5	<ul style="list-style-type: none"> • Netskope Platform Implementation: This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.

Reliable Netskope NSK300 Test Topics, NSK300 New Braindumps Files

We have a long history of 10 years in designing the NSK300 exam guide and enjoys a good reputation across the globe. There are so many features to show that our NSK300 study engine surpasses others. We can confirm that the high quality is the guarantee to your success. At the same time, the prices of our NSK300 practice materials are quite reasonable for no matter the staffs or the students to afford. What is more, usually we will give some discounts to our worthy customers.

Netskope Certified Cloud Security Architect Sample Questions (Q39-Q44):

NEW QUESTION # 39

Review the exhibit.

You are the proxy administrator for a medical devices company. You recently changed a pilot group of users from cloud app steering to all Web traffic. Pilot group users have started to report that they receive the error shown in the exhibit when attempting to access the company intranet site that is publicly available. During troubleshooting, you realize that this site uses your company's internal certificate authority for SSL certificates.

Which three statements describe ways to solve this issue? (Choose three.)

- A. Create a Real-time Protection policy to allow access.
- **B. Bypass SSL inspection for the affected site(s).**
- C. Instruct the user to proceed past the error message
- **D. Import the root certificate for your internal certificate authority into Netskope.**
- **E. Change the SSL Error Settings from Block to Bypass in the Netskope tenant.**

Answer: B,D,E

Explanation:

- * A. Import the root certificate for your internal certificate authority into Netskope:
* This step ensures that Netskope recognizes and trusts SSL certificates issued by your company's internal certificate authority. By importing the root certificate, you enable proper SSL inspection and validation for internal sites.
- * B. Bypass SSL inspection for the affected site(s):
* Since the intranet site uses your company's internal certificate authority, bypassing SSL inspection for this specific site allows users to access it without encountering SSL errors.
- * D. Change the SSL Error Settings from Block to Bypass in the Netskope tenant:
* Adjusting the SSL Error Settings to "Bypass" allows users to proceed past SSL errors, including self-signed certificate errors. This ensures uninterrupted access to the intranet site. References:

NEW QUESTION # 40

You have users connecting to Netskope from around the world. You need a way for your NOC to quickly view the status of the tunnels and easily visualize where the tunnels are located. Which Netskope monitoring tool would you use in this scenario?

- A. Network Events in Skope IT
- **B. Network Steering in Digital Experience Management**
- C. Web Usage Summary in Advanced Analytics
- D. Alerts in Skope IT

Answer: B

Explanation:

Network Steering in Digital Experience Management is the appropriate Netskope monitoring tool for this scenario. It allows the Network Operations Center (NOC) to quickly view the status of the tunnels and provides an easy way to visualize the locations of the tunnels. This tool is designed to give a clear overview of network health and performance, which is essential for managing global connectivity and ensuring the reliability of the service.

The use of Network Steering in Digital Experience Management for monitoring tunnel status and location visualization is supported by Netskope's documentation on secure web gateway use cases and best practices for deployment and validation of IPSec/GRE tunnels.

NEW QUESTION # 41

You are troubleshooting an issue with users who are unable to reach a financial SaaS application when their traffic passes through Netskope. You determine that this is because of IP restrictions in place with the SaaS vendor. You are unable to add Netskope's IP ranges at this time, but need to allow the traffic.

How would you allow this traffic?

- **A. Use Explicit Proxy Over Tunnel (EPoT) so the traffic will egress from the corporate data center.**
- B. Use an IPsec tunnel to forward traffic so it will egress from the corporate data center.
- C. Use Cloud Explicit Proxy so the traffic will egress from the corporate data center.
- D. Use NPAT to implement Source IP anchoring so the traffic will egress from the corporate data center.

Answer: A

NEW QUESTION # 42

Your customer is currently using Directory Importer with Active Directory (AD) to provision users to Netskope. They have recently acquired three new companies (A, B, and C) and want to onboard users from the companies onto the Netskope platform.

Information about the companies is shown below.

- Company A uses Active Directory.
- Company B uses Azure AD.
- Company C uses Okta Universal Directory.

Which statement is correct in this scenario?

- A. Company A users cannot be provisioned to Netskope because the customer is already using AD Importer to import users from another Active Directory environment.
- B. Either Company B or Company C users cannot be provisioned because integration with only one SCIM solution is allowed.
- C. Users from Company B and Company C cannot be provisioned because the customer is already using AD Importer.
- **D. Users from Companies A, B, and C can be provisioned to Netskope by deploying additional AD Importers and integrating more than one SCIM solution.**

Answer: D

Explanation:

Users from Companies A, B, and C can indeed be provisioned to Netskope. Company A, which uses Active Directory, can continue to use the existing AD Importer. For Company B that uses Azure AD and Company C that uses Okta Universal Directory, integration with SCIM (System for Cross-domain Identity Management) solutions is possible. Netskope supports provisioning users from multiple directories, including Active Directory and cloud-based identity providers like Azure AD and Okta, by using additional AD Importers and integrating more than one SCIM solution¹².

NEW QUESTION # 43

Your client is an NG-SWG customer. They are going to use the Explicit Proxy over Tunnel (EPoT) steering method. They have a specific list of domains that they do not want to steer to the Netskope Cloud. What would accomplish this task"

- A. Define exceptions in the Netskope steering configuration
- B. Use an SSL decryption policy.
- **C. Define exception domains in the PAC file.**
- D. Create a real-time policy with a bypass action.

Answer: C

Explanation:

To accomplish the task of not steering specific domains to the Netskope Cloud while using the Explicit Proxy over Tunnel (EPoT) steering method, you would define exception domains in the PAC file (A). This is because the PAC file is used to specify which domains should bypass the proxy and connect directly, thus allowing for granular control over the traffic that is steered to Netskope1.

NEW QUESTION # 44

.....

BraindumpStudy Netskope Certified Cloud Security Architect (NSK300) practice test software is another great way to reduce your stress level when preparing for the Netskope Exam Questions. With our software, you can practice your excellence and improve your competence on the Netskope Certified Cloud Security Architect (NSK300) exam dumps. Each Netskope NSK300 practice exam, composed of numerous skills, can be measured by the same model used by real examiners.
