Brain Dump CAD Free - CAD Reliable Exam Book

Our company Free4Torrent abides by the industry norm all the time. By virtue of the help from professional experts, who are conversant with the regular exam questions of our latest CAD real dumps. They can satisfy your knowledge-thirsty minds. And our CAD Exam Quiz is quality guaranteed. By devoting ourselves to providing high-quality CAD practice materials to our customers all these years we can guarantee all content is of the essential part to practice and remember.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q258-Q263):

NEW QUESTION # 258

In a privately-scoped application, which methods are used for logging messages in server-side scripts? (Choose 2 answers)

- A. `gs.logError()`
- B. `gs.info()`
- C. `gs.error()`
- D. `gs.debug()`
- E. `gs.log()`

Answer: B,E

Explanation:

In ServiceNow, the GlideSystem (gs) object provides several methods for logging messages in server-side scripts. In a privately-scoped application, the following methods are commonly used:

A. `gs.log()`: This method logs a message to the system log (syslog table). It is a general-purpose logging method that allows developers to record informational messages.

E. `gs.info()`: This method logs informational messages to the system log. It is functionally similar to `gs.log()` but is specifically intended

for informational messages.

The other options are not standard methods provided by the GlideSystem object:

B . gs.error(): This method does not exist in the GlideSystem API.

C . gs.debug(): This method does not exist in the GlideSystem API.

D . gs.logError(): This method does not exist in the GlideSystem API.

For more detailed information, refer to the official ServiceNow documentation on the GlideSystem API.

NEW QUESTION # 259

When creating an application through the Guided Application Creator, what are the options for creating a table? (Choose 3 answers)

- A. Create a table from scratch
- B. Use API calls
- C. Upload a spreadsheet
- D. Link to external tables
- E. Create a table from a template
- F. Run import jobs
- G. Extend a table

Answer: A,E,G

Explanation:

* Options for Creating Tables in Guided Application Creator:

* Create a table from scratch: This option allows you to define a completely new table with custom fields and configurations.

* Create a table from a template: You can use predefined table templates to speed up table creation.

Templates often include pre-configured fields and settings.

* Extend a table: This allows you to create a new table by inheriting fields and functionality from an existing table, enabling reuse and consistency.

* Why Other Options Are Incorrect:

* Option A (Link to external tables): Linking to external tables is not an option provided in the Guided Application Creator; external data is typically accessed through integration methods.

* Option D (Run import jobs): Import jobs are used for data migration, not for table creation in the Guided Application Creator.

* Option E (Upload a spreadsheet): While uploading a spreadsheet can create tables, this is a feature of Import Sets, not the Guided Application Creator.

* Option F (Use API calls): API calls are for integration and not an option for creating tables directly in the Guided Application Creator.

ServiceNow Developer Documentation on Guided Application Creator.

NEW QUESTION # 260

How must Application Access be configured to prevent all other private application scopes from creating configuration records on an application's data tables?

- A. Set the Accessible from field value to All application scopes and de-select the Can create option
- B. You must create Access Controls to prevent all other application scopes from creating configuration records on an application's data tables rather than using Application Access
- C. Set the Accessible from field value to This application scope only and de-select the Allow access to this table via web services option
- D. Set the Accessible from field value to This application scope only

Answer: B

Explanation:

Explanation/Reference: https://docs.servicenow.com/bundle/orlando-application-development/page/build/applications/concept/c_ExampleGrantingAccessToConfigRecs.html

NEW QUESTION # 261

What syntax is used in a Record Producer script to access values from Record Producer form fields?

- A. `producer.variable_name`
- B. `producer.field_name`
- C. `current.variable_name`
- D. `current.field_name`

Answer: A

Explanation:

The syntax used in a Record Producer script to access values from Record Producer form fields is `producer.variable_name`. A Record Producer is a type of catalog item that allows users to create records on any table from the service catalog. A Record Producer script is a server-side script that runs when a Record Producer is submitted, and can be used to set values or perform actions on the generated record. The producer object is a global object that represents the Record Producer form and its variables. The `variable_name` is the name of the variable defined in the Record Producer. Reference: [ServiceNow Docs - Record producers], [ServiceNow Docs - Record producer script]

NEW QUESTION # 262

Which of the following statements is true about Guided Application Creator?

- A. The global scope option is turned on by default
- B. The welcome screen appears every time a new application is created
- C. Default access controls are automatically created
- D. A scope application user role is automatically created

Answer: B

NEW QUESTION # 263

.....

You can use this Certified Application Developer-ServiceNow (CAD) practice exam software to test and enhance your Certified Application Developer-ServiceNow (CAD) exam preparation.
