

2026 SCAIP: Trustable Saviynt Certified Advanced IGA Professional (Level 200) Mock Exams

Our system is high effective and competent. After the clients pay successfully for the SCAIP study materials the system will send the products to the clients by the mails. The clients click on the links in the mails and then they can use the SCAIP Study Materials immediately. Our system provides safe purchase procedures to the clients and we guarantee the system won't bring the virus to the clients' computers and the successful payment for our SCAIP study materials.

It is very convenient for all people to use the SCAIP study materials from our company. Our study materials will help a lot of people to solve many problems if they buy our products. The online version of SCAIP study materials from our company is not limited to any equipment, which means you can apply our study materials to all electronic equipment, including the telephone, computer and so on. So the online version of the SCAIP Study Materials from our company will be very useful for you to prepare for your exam. We believe that our SCAIP study materials will be a good choice for you.

SCAIP Latest Braindumps Ppt, Trustworthy SCAIP Pdf

With all of these SCAIP study materials, your success is 100% guaranteed. Moreover, we have Demos as freebies. The free demos give you a prove-evident and educated guess about the content of our practice materials. As long as you make up your mind on this exam, you can realize their profession is unquestionable. And their profession is expressed in our SCAIP training prep thoroughly. They are great help to catch on the real knowledge of SCAIP exam and give you an unforgettable experience. Do not miss this little benefit we offer.

Saviynt Certified Advanced IGA Professional (Level 200) Sample Questions (Q56-Q61):

NEW QUESTION # 56

The EIC Administrator observed that all accounts were disabled in Saviynt due to incorrect configuration in the target application. What controls can be implemented in Saviynt to avoid such scenarios?

- A. It is not possible to set a limit
- B. Use the `accountThresholdValue` attribute in the `STATUS_THRESHOLD_CONFIG` connection parameter
- C. Set the limit in the external config file
- D. Use the `accEntThresholdValue` attribute in the `STATUS_THRESHOLD_CONFIG` connection parameter

Answer: B

Explanation:

In Saviynt EIC, mass unintended changes—such as all accounts being disabled due to incorrect target application configuration—can be prevented using threshold-based controls. These controls are defined using the `STATUS_THRESHOLD_CONFIG` connection parameter, which acts as a safeguard during reconciliation and provisioning processes.

The correct attribute in this scenario is `accountThresholdValue` (Option D). This parameter allows administrators to define a threshold limit for account status changes (such as disablement). If the number or percentage of accounts being disabled exceeds the defined threshold, Saviynt can stop or flag the operation, preventing large-scale unintended impact.

Option A (`accEntThresholdValue`) is used for entitlement-level thresholds, not account status changes.

Option B is incorrect because Saviynt does not provide this safeguard mechanism. Option C is also incorrect since such controls are not managed externally but are part of Saviynt's connector configuration.

By using `accountThresholdValue` within `STATUS_THRESHOLD_CONFIG`, organizations can implement strong governance and prevent bulk account disablement due to misconfigurations or data issues during account import or reconciliation.

NEW QUESTION # 57

The Helpdesk has set a new password for the user who called in for password reset assistance. Choose the correct configuration to share the password with the calling user

- A. Configure an email template in the Reset Password notification under password policy
- B. Configure an email template in Change Password Notification configurations
- C. System automatically shares the password
- D. Setup User Update Rule and configure an email template

Answer: A

Explanation:

In Saviynt EIC, password management includes configurable notification mechanisms to securely communicate password changes or resets to users. When a Helpdesk performs a password reset, the appropriate configuration to notify the user is through the Reset Password notification under Password Policy.

Option C is correct because Saviynt provides a dedicated Reset Password notification template within password policy configurations. This ensures that whenever a password is reset (either by user self-service or by Helpdesk), the system triggers the configured email template to notify the user. This template can include secure messaging and instructions related to the new password or next steps.

Option A is incorrect because the system does not automatically share passwords without proper configuration. Option B applies to change password scenarios initiated by users, not Helpdesk resets. Option D is not recommended, as User Update Rules are not designed specifically for password notification workflows.

Thus, configuring the Reset Password notification under password policy is the correct and secure approach.

NEW QUESTION # 58

What are the different authentication modes supported for SMTP configurations? (Multi Select)

- A. None of the above
- B. OAuth
- C. NTLM
- D. Basic

Answer: B,C,D

Explanation:

In Saviynt EIC, SMTP configuration is used to enable email notifications for workflows such as access requests, certifications, alerts, and system communications. To securely connect with mail servers, Saviynt supports multiple authentication mechanisms. The valid authentication modes are NTLM, OAuth, and Basic, making Options A, B, and D correct.

Basic Authentication (Option D) is the traditional method where a username and password are used to authenticate with the SMTP server. While widely supported, it is less secure compared to modern methods and is being phased out in many environments.

NTLM (Option A) is commonly used in Microsoft-based environments (e.g., Exchange servers) and provides integrated authentication using Windows credentials, offering better security than basic authentication.

OAuth (Option B) is a modern and more secure authentication mechanism that uses token-based authorization instead of storing credentials. It is commonly used with cloud-based email services such as Microsoft 365 or Google Workspace.

Option C is incorrect because Saviynt explicitly supports multiple authentication modes.

Thus, NTLM, OAuth, and Basic are the supported SMTP authentication modes in Saviynt.

NEW QUESTION # 59

Which of the following EIC modules support configuration of active workflow? (Choose 3 options)

- A. Endpoint
- B. Security System
- C. Global Configuration
- D. Entitlement Type

Answer: A,B,D

Explanation:

In Saviynt EIC, workflows are a core component used to control approval processes for access requests, provisioning, and other identity lifecycle events. These workflows can be configured at multiple levels depending on the scope and granularity required.

Security System (A) supports workflow configuration to define approval processes at the application level.

This allows organizations to enforce consistent approval logic for all endpoints associated with that system.

Endpoint (B) also supports workflow configuration, enabling more granular control where different endpoints within the same security system may require distinct approval processes. This is particularly useful in complex environments with varied access control requirements.

Entitlement Type (D) supports workflows to manage approvals specific to entitlement categories (such as roles, groups, or permissions), ensuring appropriate governance at a finer level.

Global Configuration (C), while important for system-wide settings, is not typically used to directly assign active workflows to access requests. Instead, workflows are selected and applied within modules like Security System, Endpoint, and Entitlement Type.

Thus, the correct modules supporting active workflow configuration are Security System, Endpoint, and Entitlement Type.

NEW QUESTION # 60

The EIC administrator has a requirement for integrating EIC with ServiceNow as a ticketing system, where end users should be able to check the status of associated tickets in ServiceNow from EIC. What option can the administrator utilize to fulfill this requirement?

- A. TICKETSTATUSJSON
- B. CREATETICKETJSON
- C. It is not possible to check the status of ticket in ServiceNow
- D. SYNCTICKETSTATUSJSON

Answer: A

Explanation:

In Saviynt EIC integration with ServiceNow as a ticketing system (ITSM), various JSON configurations are used to define how tickets are created, updated, and tracked. To enable users to check the status of tickets from EIC, the correct configuration is TICKETSTATUSJSON.

TICKETSTATUSJSON is specifically used to define how Saviynt retrieves the current status of a ticket from ServiceNow. It maps the API response fields from ServiceNow (such as state, status, or resolution) to Saviynt fields, allowing the system to display real-time ticket status within the EIC interface.

Option A (SYNCTICKETSTATUSJSON) is typically used for synchronization jobs that update ticket statuses in bulk, not for direct user-level status retrieval. Option B (CREATETICKETJSON) is used only for ticket creation, defining how requests are sent to ServiceNow. Option D is incorrect because Saviynt does not support ticket status tracking through proper integration configuration. Thus, TICKETSTATUSJSON is the correct option to enable visibility of ticket status within Saviynt EIC.

NEW QUESTION # 61

.....

Free demo is available for SCAIP training materials, so that you can have a better understanding of what you are going to buy. Free demo will represent you what the complete version is like. We suggest you try free demo before buying. In addition, SCAIP training materials are high quality and accuracy, since we have a professional team to collect the latest information of the exam. Therefore if you choose SCAIP Exam Dumps of us, you can get the latest version timely. We provide you with free update version for one year for SCAIP training materials.
