The Microsoft PL-600 PDF is the collection of real, valid, and updated Microsoft PL-600 practice questions. The PL-600 PDF dumps file works with all smart devices. You can use the Microsoft Power Platform Solution Architect PDF questions on your tablet, smartphone, or laptop and start PL-600 Exam Preparation anytime and anywhere. The PL-600 dumps PDF provides you with everything that you must need in Microsoft PL-600 exam preparation and enable you to crack the final Microsoft PL-600 exam quickly.

Exam Requirements

As it is clear that PL-600 Exam is associated with an expert-level certificate, some prior expertise is expected. Before you aim at it, make sure you have already worked as a Power Platform solution architect for 1 to 3 years. Also, a senior consultant or developer with around 7 to 10 years of work experience can also pass this certification exam and excel in the career. So, all these long years of expertise let a test-taker demonstrate a deeper understanding of Power Platform architecture.

Besides, before this exam, the candidate is required to have one of two certificates in advance: Microsoft Certified: Power Platform Functional Consultant Associate or Microsoft Certified: Power Platform Developer Associate. This is due to the fact that each of these accreditations strengthens out the foundational understanding of Microsoft Power Platform and simplifies the exam journey.

Exam PL-600 Learning | Reliable PL-600 Test Experience

Our company employs the first-rate expert team which is superior to others both at home and abroad. Our experts team includes the experts who develop and research the PL-600 study materials for many years and enjoy the great fame among the industry, the senior lecturers who boost plenty of experiences in the information about the exam and published authors who have done a deep research of the PL-600 Study Materials and whose articles are highly authorized. They provide strong backing to the compiling of the PL-600 study materials and reliable exam materials resources. They compile each answer and question carefully.

Microsoft Power Platform Solution Architect Sample Questions (Q44-Q49):

NEW QUESTION # 44

You are performing a requirements analysis for a customer.

The customer provides the following requirements:

- * Power Platform storage capacity must remain under 100 percent.
- * Customer service representatives must be sent an email when they are assigned a case.
- * Help desk technicians must be shown an error message when they try to delete a task row.
- * The plug-in pass rate must remain over 99 percent for the production environment.

You need determine if the requirements are functional or non-functional.

Which requirement type should you use? To answer, drag the appropriate requirement types to the correct requirements. Each requirement type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Non-functional

Non-functional requirements commonly describe non-behavior aspects of the solution such as performance requirements.

Box 2: Functional

Functional requirements describe what the solution needs to do or its behaviors.

Box 3: Functional

Box 4: Non-functional

Examples of common non-functional requirement types include:

- * Availability
- * Compliance/regulatory
- * Data retention/residency
- * Performance (response time, and so on)
- * Privacy
- * Recovery time
- * Security
- * Scalability

Reference:

<https://docs.microsoft.com/en-us/learn/modules/work-with-requirements/3-functional-requirements>

<https://docs.microsoft.com/en-us/learn/modules/work-with-requirements/4-non-functional-requirements>

NEW QUESTION # 45

A company plans to create a Power Apps portal to manage support cases for customers. The company has an account hierarchy for customers. The hierarchy supports accounts, cases, and contacts where both contacts and cases belong to their relevant account.

The company has the following requirements:

Portal users must only see the notes for the cases that they manage.

Portal users must only see cases that are submitted by their colleagues.

You need to design the security model for the portal.

Which entity permission scope should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation

□ Box 1: Contact

With Contact scope, a signed-in user in the role for which the permission record is defined will have the rights granted by that permission only for records that are related to that user's contact record via a defined relationship.

Box 2: Account

With Account Scope, a signed-in user in the role for which the permission record is defined will have the rights granted by that permission only for records that are related to that user's parent account record via a defined relationship.

This scope means that the entity list will only show the records of the selected entity that are associated to the user's parent account. For example, if an entity permission allows Read access to Lead entity with the Account scope, the user having this permission can view all the leads of only the parent account of the user.

NEW QUESTION # 46

Case Study 3 - Fabrikam, inc.

Background

Fabrikam, Inc. manufactures industrial metal cutting machines. The company installs and services the machines for customers. Fabrikam has manufacturing plants in Canada, France, and China. The company also has regional service organizations that are responsible for installation and maintenance of the machines.

Current environment

Overview

Operations for the company are managed very informally. Only a small number of long-term employees are aware of all manufacturing processes. The company has been experiencing quality issues associated with its manufacturing operations and installations.

The company wants to implement a way to capture quality inspection results for each machine produced. Current inspection checklists are stored in the Files section of a Teams channel for inspectors. Inspectors commonly print the incorrect inspection checklist.

The company has specific inspection stations for certain inspection steps. Each station has the gauges and equipment required for related inspection steps. There is often a backlog at specific inspection stations. This results in delays in shipping machines to customers.

Accounting system

The current system does not handle shop floor or manufacturing planning functionality.

Machines are assigned serial numbers and placed in stock until they are shipped to customers.

Employee information is maintained only within the accounting system. Access to the information is strictly controlled due to privacy regulations and company policies.

Other systems

The company has an enterprise Microsoft 365 subscription. The company uses Microsoft 365 only for sending and receiving email.

The company uses photos of employees to generate employee badges. Photos are uploaded into Microsoft 365 user profiles.

The company recently started using Dynamics 365 Field Service to manage and maintain the machines that it installs for its customers. The app has not been customized.

The company has added roles, skills, and certification proficiencies to Dynamics 365 Field Service resources to support both customer onsite inspections and final manufacturing inspections.

Requirements

Quality inspection app

Fabrikam is evaluating Microsoft Power Platform to determine whether it can meet the company's requirements for a manufacturing defect and quality inspection solution. Each machine produced must be subjected to a quality inspection at various points during production. Each machine must undergo a more extensive quality inspection before the machine can be shipped to the customer.

Inspection orders

Inspection orders must:

- Allow entry of quality ratings of passed or failed for each quality metric identified for the machine being rated.
- Include information about the person who performed each inspection step and any comments made by the inspector.
- Be automatically marked as failed if one inspection step rating is marked as failed.
- Be automatically marked for re-inspection should a machine fail inspection. The new inspection order must be created by using the originating inspection order as a template.

Inspectors must fill in findings comments and upload at least one photo for any inspection step that is marked as failed.

Inspection standardization

Standardized checklists must be stored in the solution for use by inspectors. A copy must be created when a new inspection is initiated. The solution must:

Prevent an inspector from proceeding to the next step of the checklist until required information for a step is entered.

Support the addition of steps to inspections to support custom features added to a machine for a customer.
Support the direct input of measurements from testing gauges to avoid incorrect readings being entered by inspectors.
Provide a visual representation of the testing measurement limits for each step. Include an indication of how the measured value compares to measurement limits and whether the measurement is within tolerance. Users must be able to configure the visualizations to display the minimum value and maximum value, and whether the reading is within the tolerance of a single targeted value. It must also be able to be used for maintenance inspections once the machine has been installed.
Support the ability to store photo references within each inspection step to document defects found during inspections.

Security

Users must be active employees of Fabrikam

When a user signs into the inspection solution, the solution must display a picture of the employee who has signed in.

Supervisors must be able to modify standard checklists. Other employees must be prevented from modifying checklists.

You must prevent users from changing inspection order data once an inspection is marked as final.

Analytics and reporting

The solution must:

Provide metrics including existing and upcoming demand by inspection station, average time spent per user at a station, and average time a machine spends at each inspection point.

Provide metrics per inspector including number of inspections performed by month, and number of inspections per rating type (pass, fail).

Provide a printed quality certificate to be included with each machine.

Issues

During initial testing of the solution, testers report that they cannot see the photos taken during a previously failed inspection.

Hotspot Question

You need to recommend solutions to meet the inspection requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Schedule board

The Dynamics 365 Field Service schedule board provides an overview of resource availability and bookings you can make.

Box 2: Azure IoT Central connector

Information about each machine produced must be transferred to Dynamics 365 Field Service.

The difference between IoT hub and IoT central is that IoT is an application platform that simplifies the creation of Internet of Things solutions. IoT central helps to reduce the challenges of implementing IoT development, operations, and management. IoT Central is a fully managed Software as a Service solution.

Note: There are three ways you can use to connect IoT-enabled devices into the Field Service solution:

Connected Field Service for Azure IoT Central

Connected Field Service for Azure IoT Hub

Connected Field Service for non-Azure IoT providers using the extensible IoT provider framework Reference:

<https://vegibit.com/azure-iot-hub-vs-iot-central>

<https://docs.microsoft.com/en-us/dynamics365/field-service/configure-schedule-board>

NEW QUESTION # 47

You are evaluating company data.

The data must be migrated to Microsoft Dataverse.

You need to recommend the process to ensure clean data for the migration.

Solution: Limit the volume of migrated data.

Does the solution meet the goal?

- A. No
- B. Yes

Answer: A

NEW QUESTION # 48

You are a Microsoft Power Platform architect.

You have identified several project risks.

You need to categorize potential risks that are specific to your customer.

How should you categorize the risks? To answer, drag the appropriate categories to the correct risks. Each category may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

NEW QUESTION # 49

.....

In order to provide the most effective PL-600 exam materials which cover all of the current events for our customers, a group of experts in our company always keep an close eye on the changes of the PL-600 exam even the smallest one, and then will compile all of the new key points as well as the latest types of exam questions into the new version of our PL-600 Practice Test, and you can get the latest version of our study materials for free during the whole year. Do not lose the wonderful chance to advance with times.
