## Terraform-Associate-003 Latest Exam Fee | Braindumps Terraform-Associate-003 Pdf

In order to facilitate the user's offline reading, the Terraform-Associate-003 study braindumps can better use the time of debris to learn, especially to develop PDF mode for users. In this mode, users can know the Terraform-Associate-003 prep guide inside the learning materials to download and print, easy to take notes on the paper, and weak link of their memory, and every user can be downloaded unlimited number of learning, greatly improve the efficiency of the users with our Terraform-Associate-003 Exam Questions. Our Terraform-Associate-003 prep guide can be very good to meet user demand in this respect, allow the user to read and write in a good environment continuously consolidate what they learned.

## HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample

## Questions (Q150-Q155):

### NEW QUESTION # 150

Which of the following commands would you use to access all of the attributes and details of a resource managed by Terraform?

- A. terraform state list
- **B. terraform state show 'provider\_type.name'**
- C. terraform get 'provider\_type.name'
- D. terraform state list 'provider\_type.name'

**Answer: B**

Explanation:

The terraform state show command allows you to access all of the attributes and details of a resource managed by Terraform. You can use the resource address (e.g. provider\_type.name) as an argument to show the information about a specific resource. The terraform state list command only shows the list of resources in the state, not their attributes. The terraform get command downloads and installs modules needed for the configuration. It does not show any information about resources.

References = [Command: state show] and [Command: state list]

### NEW QUESTION # 151

\_\_\_\_\_ backends support state locking.

- A. No
- **B. Some**
- C. All
- D. Only local

**Answer: B**

Explanation:

Some backends support state locking, which prevents other users from modifying the state file while a Terraform operation is in progress. This prevents conflicts and data loss. Not all backends support this feature, and you can check the documentation for each backend type to see if it does.

### NEW QUESTION # 152

What is modified when executing Terraform in refresh-only mode?

- A. Your cloud infrastructure.
- **B. Your state file.**
- C. Your Terraform plan.
- D. Your Terraform configuration.

**Answer: B**

Explanation:

Comprehensive and Detailed in-Depth Explanation:

\* Inrefresh-only mode(terraform apply -refresh-only), Terraform updates the state file to match the actual infrastructure without modifying resources.

\* A (Terraform configuration)-Not modified in refresh-only mode.

\* B (Terraform plan)-Plan is generated but not modified.

\* D (Cloud infrastructure)-Not modified in refresh-only mode.

Official Terraform Documentation Reference:Refresh-Only Mode

### NEW QUESTION # 153

A senior admin accidentally deleted some of your cloud instances. What will Terraform do when you run terraform apply?

- A. Tear down the entire workspace's infrastructure and rebuild it.
- **B. Stop and generate an error message about the missing instances.**

- C. Build a completely brand new set of infrastructure.
- **D. Rebuild only the instances that were deleted.**

**Answer: D**

Explanation:

Comprehensive and Detailed in-Depth Explanation: Terraform detects infrastructure drift by comparing the state file with the actual infrastructure.

\* When an instance is manually deleted, Terraform sees it as missing and marks it for recreation.

\* Running terraform apply will only recreate the missing instances while leaving the rest of the infrastructure unchanged.

Explanation of incorrect answers:

\* A (Tear down everything and rebuild)- Incorrect. Terraform does not destroy existing infrastructure unless explicitly told to.

\* B (Build a completely new set of infrastructure)- Incorrect. Terraform does not create duplicates unless configuration changes.

\* D (Stop and error out)- Incorrect. Terraform does not fail; it rebuilds missing resources automatically.

Official Terraform Documentation Reference: Handling Infrastructure Drift

### NEW QUESTION # 154

Any user can publish modules to the public Terraform Module Registry.

- A. False
- **B. True**

**Answer: B**

Explanation:

The Terraform Registry allows any user to publish and share modules. Published modules support versioning, automatically generate documentation, allow browsing version histories, show examples and READMEs, and more. Public modules are managed via Git and GitHub, and publishing a module takes only a few minutes. Once a module is published, releasing a new version of a module is as simple as pushing a properly formed Git tag.

References = The information can be verified from the Terraform Registry documentation on Publishing Modules provided by HashiCorp Developer.

### NEW QUESTION # 155

.....

Our Terraform-Associate-003 learning materials not only provide you with information, but also for you to develop the most suitable for your learning schedule, this is tailor-made for you, according to the timetable to study and review.
