## Positive Cloud-Digital-Leader Feedback | Cloud-Digital-Leader Updated Demo

You may be also one of them, you may still struggling to find a high quality and high pass rate Google Cloud Digital Leader study question to prepare for your exam. Your search will end here, because our study materials must meet your requirements. Our product is elaborately composed with major questions and answers. Our study materials are choosing the key from past materials to finish our Cloud-Digital-Leader Torrent prep. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the Cloud-Digital-Leader exam torrent. Then, you will have enough confidence to pass it. So start with our Cloud-Digital-Leader torrent prep from now on. We can succeed so long as we make efforts for one thing.

To prepare for the Google Cloud Digital Leader Certification Exam, candidates can take advantage of the various resources provided by Google Cloud. These resources include online training courses, practice exams, and study guides. The training courses cover everything from the basics of cloud computing to advanced topics such as data analytics and machine learning. Additionally, the practice exams are designed to help candidates get a feel for the exam format and the types of questions that they may encounter during the actual exam.

## Google Cloud Digital Leader Sample Questions (Q116-Q121):

### NEW QUESTION # 116

An organization is concerned about their cloud costs. They want to be informed when their spending exceeds a specific threshold, rather than waiting to see their bill at the end of the month. What should the organization do?

- A. Pause virtual machines during non-business hours.
- **B. Configure a budget threshold rule and alert.**
- C. Adjust project resource quota policies.
- D. Use historical cost data to predict future overspend.

**Answer: B**

Explanation:

The correct answer is A. Configure a budget threshold rule and alert. Here's why:

Context of the Question: The organization wants to be informed when their cloud spending exceeds a specific threshold to manage costs proactively rather than finding out at the end of the month.

Google Cloud Product Relevance:

Google Cloud offers a budget and alerting feature in the Cloud Billing platform. Organizations can set up a budget for their cloud expenditures and create threshold alerts that notify them when spending reaches a specified percentage of the budget (e.g., 50%, 90%, or 100%).

This feature helps organizations monitor their cloud costs in real-time and take action to prevent overspending, ensuring better financial management and cost optimization.

Why Not Other Options:

B . Pause virtual machines during non-business hours: This action could save costs but does not provide an alert mechanism based on budget thresholds.

C . Adjust project resource quota policies: Adjusting resource quotas can limit resource use but does not provide cost monitoring or alerting capabilities.

D . Use historical cost data to predict future overspend: While historical data can help with budgeting and forecasting, it does not provide real-time alerts for current spending.

Google Cloud Digital Leader Reference:

Refer to Google Cloud's Budget and alerts documentation for more details on configuring budget alerts.

#### NEW QUESTION # 117

What is an organization exclusively responsible for when they access an application through a software as a service (SaaS) model?

- A. Maintaining overall system operability
- B. Monitoring data center servers
- **C. Maintaining customer-facing content**
- D. Monitoring computer networks

**Answer: C**

#### NEW QUESTION # 118

Your organization needs to analyze data in order to gather insights into its daily operations. You only want to pay for the data you store and the queries you perform. Which Google Cloud product should your organization choose for its data analytics warehouse?

- A. Cloud SQL
- B. Cloud Spanner
- **C. BigQuery**
- D. Dataproc

**Answer: C**

Explanation:

BigQuery is an enterprise data warehouse for large amounts of relational structured data. Serverless, highly scalable, and cost-effective multicloud data warehouse designed for business agility.

#### NEW QUESTION # 119

An IoT platform is providing services to home security systems. They have more than a million customers, each with many home devices. Burglaries or child safety issues are concerns that the clients customers.

Therefore, the platform has to respond very quickly in near real time. What could be a typical data pipeline used to support this platform on Google Cloud?

- A. Cloud Functions, Cloud Dataproc, Looker
- B. Cloud Pub/Sub, Cloud Dataflow, BigQuery
- **C. Cloud Pub/Sub, Cloud Dataflow, Data Studio**
- D. Cloud Functions, Cloud Dataproc, BigQuery

**Answer: C**

Explanation:

=> Cloud Pub/Sub- Cloud Pub/Sub is the best to be the end-point for ingesting large amounts of data. It will grow as required, can stream data to downstream systems, and can also work with intermittently available backends.

=> Cloud Dataflow- supports streaming data and therefore is an appropriate option for processing the data that is ingested.

=> BigQuery- BigQuery also supports streaming data and its possible to do real time analytics on it.

=> DataStudio- DataStudio and Looker are for visualization. They don't have any in-built analysis.

=> Cloud Functions- Cloud Functions is a useful serverless endpoint. However, Pub/Sub is better in this case because it can also retain messages for a set period if it was not possible to deliver it first time.

=> Cloud Dataproc- Cloud Dataproc is used for Hadoop/Spark workloads and won't be a good fit here.

### NEW QUESTION # 120

In Google Cloud IAM: if a policy applied at the project level gives you Owner permissions, your access to an individual resource in that project might be restricted to View permission if someone applies a more restrictive policy directly to that resource. What is correct below the options

- A. Not defined by GCP.
- B. None of the above.
- **C. False**
- D. True

**Answer: C**

Explanation:

Policies are a union of those applied to resources themselves and those inherited from higher levels in the hierarchy. If a parent policy is less restrictive, it overrides a more restrictive policy applied to the resource. If a parent policy is more restrictive, it does not override a less restrictive policy applied to the resource. Therefore, access granted at a higher level in the hierarchy cannot be taken away by policies applied at a lower level in the hierarchy.

### NEW QUESTION # 121

.....

Are you trying to pass the Cloud-Digital-Leader exam to get the longing Cloud-Digital-Leader certification? As we know, there are a lot of the advantages of the certification, such as higher salaries, better job positions and so on. Perhaps at this moment, you need the help of our Cloud-Digital-Leader Study Materials. As our company's flagship product, it has successfully helped countless candidates around the world to obtain the coveted Cloud-Digital-Leader certification.
