## **First-class AD0-E124 Exam Dumps supply you high-quality Practice Materials - ActualCollection**

The Adobe AD0-E124 exam questions are designed and verified by experienced and qualified Adobe AD0-E124 exam trainers. So you rest assured that with Adobe Experience Manager DevOps Engineer Expert (AD0-E124) exam dumps you can streamline your AD0-E124 exam preparation process and get confidence to pass Adobe Experience Manager DevOps Engineer Expert (AD0-E124) exam in first attempt.

## **Adobe Experience Manager DevOps Engineer Expert Sample Questions**

## (Q153-Q158):

### NEW QUESTION # 153

A developer needs to preview a new page before releasing publicly. The DevOps engineer confirms that AEM as a Cloud Service is the latest version and that the correct IP has been added to a new Allow List for the Preview Service. The developer is still not able to access the page.

What should the DevOps engineer do?

- A. Reapply the default IP Allow List from the Preview Service
- B. Unapply the default IP Allow List from the Publish Service
- C. Create an IP Allow List and apply to Publish Service
- D. Unapply the default IP Allow List from the Preview Service

**Answer: D**

### NEW QUESTION # 154

What are the prerequisites for configuring federated authentication in Adobe Admin Console? (Choose two)

- A. A manually configured JSON policy in CRXDE Lite
- B. An identity provider (IdP) that supports SAML 2.0
- C. A local LDAP integration with AEM
- D. Access to the Admin Console's Enterprise Directory Management

**Answer: B,D**

### NEW QUESTION # 155

A DevOps developer needs to test virtual host configuration on Dispatcher. Which command should the DevOps engineer use?

- A. `curl -H "Host: origin-mysite.adobeqms.com" mysite.com`
- B. `curl --verbose --header origin-mysite.adobeqms.com`
- C. `curl -H "Dispatch: mysite.com" origin-mysite.adobeqms.com`
- D. `curl -H "Host: mysite.com" origin-mysite.adobeqms.com`

**Answer: D**

Explanation:

When troubleshooting routing or Virtual Host configurations on a Dispatcher (which is typically an Apache or Nginx web proxy), the proxy relies on the Host HTTP header to determine which farm or server block should process the request. Using cURL, you can bypass DNS layers and test the origin server directly by specifying the target IP or default hostname (e.g., `origin-mysite.adobeqms.com`) while explicitly passing the desired Virtual Host name via the Host header (`-H "Host: mysite.com"`). This forces the Dispatcher to process the request as if it were traffic coming for `mysite.com`.

### NEW QUESTION # 156

A DevOps engineer needs to enable caching for permission-sensitive content on AEM Publisher. `/sessionmanagement` is added to the `dispatcher.any` file, but pages with the closed user group are not getting cached.

The `dispatcher.any` file is as follows:

```
/name "internet-server"
/farms
{
/website
{
/clientheaders
{
"15g"
}
}
/virtualhosts
{...}
```

```

/sessionmanagement
{
/directory "/usr/local/apache/.sessions"
/encode "md5"
/header "HTTP:authorization"
/timeout "800"
}
/renders
{...}
/filter
{...}
/vanity_urls
{...}
/cache
{
/docroot "/opt/dispatcher/cache"
/statfile "/tmp/dispatcher-website.stat"
/allowAuthorized "1"
/rules
{...}
/invalidate
{...}
}
/statistics
{ /categories {...} }
/stickyConnectionsFor "/myFolder"
/health_check
{...}
/retryDelay "1"
/numberOfRetries "5"
/unavailablePenalty "1"
/failover "1"
}
}

```

Which configuration should be modified to enable permission-sensitive caching?

- A. Add "authorization" header in the /clientheaders sub-section
- **B. Set the /allowAuthorized "0" in the /cache sub-section**
- C. Set /rules to /0000 { /glob "\*" /type "allow" } in the /cache sub-section
- D. Set /stickyConnectionsFor value to /usr/local/apache/.sessions

**Answer: B**

#### NEW QUESTION # 157

A DevOps engineer must upload SSL certificates for multiple domains to Cloud Manager via the UI. Which two certificate formats can the DevOps engineer use? (Choose two.)

- A. Single certificate for each domain
- **B. SAN certificate**
- **C. Wildcard certificate**
- D. PKCS certificate

**Answer: B,C**

Explanation:

To secure multiple domains or subdomains efficiently using a single certificate upload in Adobe Cloud Manager, DevOps engineers should use either a SAN (Subject Alternative Name) certificate or a Wildcard certificate. A SAN certificate allows multiple distinct hostnames (e.g., example.com, shop.example.com, example.org) to be protected by a single certificate. A Wildcard certificate (e.g., \*.example.com) protects a single domain and all its subdomains. Both are officially supported in the Cloud Manager UI for SSL deployment.

## NEW QUESTION # 158

.....

If you are an IT staff, do you want a promotion? Do you want to become a professional IT technical experts? Then please enroll in the Adobe AD0-E124 exam quickly. You know how important this certification to you. Do not worry about that you can't pass the exam, and do not doubt your ability. Join the Adobe AD0-E124 exam, then ActualCollection help you to solve the all the problem to prepare for the exam. It is a professional IT exam training site. With it, your exam problems will be solved. ActualCollection Adobe AD0-E124 Exam Training materials can help you to pass the exam easily. It has helped numerous candidates, and to ensure 100% success. Act quickly, to click the website of ActualCollection, come true you IT dream early.
