We are willing to recommend you to try the AWS-Developer practice guide from our company. Our AWS-Developer learning questions are in high quality and efficiency test tools for all people. You can just try our three different versions of our AWS-Developer training quiz, you will find that you can study at anytime and anyplace.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q106-Q111):

NEW QUESTION # 106

A Developer writes an AWS Lambda function and uploads the code in a .ZIP file to Amazon S3.

The Developer makes changes to the code and uploads a new .ZIP file to Amazon S3. However, Lambda executes the earlier code.

How can the Developer fix this in the LEAST disruptive way?

- A. Call the create-alias API.
- B. Create another Lambda function and specify the new .ZIP file.
- C. Call the update-function-code API.
- D. Remove the earlier .ZIP file first, then add the new .ZIP file.

Answer: C

NEW QUESTION # 107

A company's new mobile app uses Amazon API Gateway. As the development team completes a new release of its APIs, a developer must safely and transparently roll out the API change.

What is the SIMPLEST solution for the developer to use for rolling out the new API version to a limited number of users through API Gateway?

- A. Implement an Amazon CloudWatch alarm to trigger a rollback if the observed HTTP 500 status code rate exceeds a predetermined threshold.
- B. Use the canary release deployment option in API Gateway. Direct a percentage of the API traffic using the canarySettings setting.
- C. Validate the new API version and promote it to production during the window of lowest expected utilization.
- D. Create a new API in API Gateway. Direct a portion of the traffic to the new API using an Amazon Route 53 weighted routing policy.

Answer: B

NEW QUESTION # 108

A company is building an application to track athlete performance using an Amazon DynamoDB table. Each item in the table is identified by a partition key (user_id) and a sort key (sport_name). The table design is shown below:

(Note: Not all table attributes are shown)

A Developer is asked to write a leaderboard application to display the top performers (user_id) based on the score for each sport_name.

What process will allow the Developer to extract results MOST efficiently from the DynamoDB table?

- A. Use a DynamoDB query operation with the key attributes of user_id and sport_name and order the results based on the score attribute.
- B. Create a local secondary index with a primary key of sport_name and a sort key of score and get the results based on the score attribute.
- C. Use a DynamoDB scan operation to retrieve scores and user_id based on sport_name, and order the results based on the score attribute.
- D. Create a global secondary index with a partition key of sport_name and a sort key of score, and get the results

Answer: D

NEW QUESTION # 109

A developer is building a serverless application hosted on AWS that uses Amazon Redshift as a data store.

The application has separate module for read/write and read-only functionality. The modules need their own database users for compliance reasons.

Which combination of steps should a security engineer implement to grant appropriate access? (Choose two.)

- A. Configure a VPC endpoint for Amazon Redshift. Configure an endpoint policy that maps database users to each application module, and allow access to the tables that are required for read-only and read/write.
- B. Configure an IAM policy for each module. Specify the ARN of an Amazon Redshift database user that allows the GetClusterCredentials API call.
- C. Create local database users for each module.
- D. Configure cluster security groups for each application module to control access to database users that are required for read-only and read-write.
- E. Configure an IAM policy for each module. Specify the ARN of an IAM user that allows the GetClusterCredentials API call.

Answer: C,D

NEW QUESTION # 110

A user is accessing an EC2 instance on the SSH port for IP 10.20.30.40. Which one is a secure way to configure that the instance can be accessed only from this IP?

- A. In the security group, open port 22 for IP 10.20.30.40/24
- B. In the security group, open port 22 for IP 10.20.30.40/0
- C. In the security group, open port 22 for IP 10.20.30.40
- D. In the security group, open port 22 for IP 10.20.30.40/32

Answer: D

Explanation:

In AWS EC2, while configuring a security group, the user needs to specify the IP address in CIDR notation. The CIDR IP range 10.20.30.40/32 says it is for a single IP 10.20.30.40. If the user specifies the IP as 10.20.30.40 only, the security group will not accept and ask it in a CIRD format.
