Most of the FCP_FMG_AD-7.4 exam dumps on the platform are out of reach for most users due to their high price. Visit the Fortinet FCP_FMG_AD-7.4 exam dumps if you want to buy real Fortinet FCP_FMG_AD-7.4 Exam Questions at a good price. Start your Fortinet FCP_FMG_AD-7.4 exam preparation with our exam practice questions.

Fortinet FCP_FMG_AD-7.4 Exam Syllabus Topics:

| Topic	Details
Topic 1	• Device Manager: In this domain, the focus is on how to register devices within ADOMs, implement configuration changes using scripts, and troubleshoot using the revision history.
Topic 2	• Advanced Configuration: This domain explains FortiManager's high availability (HA), configures FortiGuard services and works with the global database ADOM.
Topic 3	• Troubleshooting: This section covers how to fimiliarize with FortiManager deployment scenarios and troubleshoot issues related to imports, installations, device-level, ADOM-level, and system-level concerns.
Topic 4	• Policy and Objects: This section deals with how to manage policies and objects, oversee ADOM revisions, configure workspace mode, and conduct policy imports and installations.
Topic 5	• Administration: This section covers how to understand FortiManager capabilities, perform initial configurations, and set up administrative domains (ADOMs).

What is more difficult is not only passing the Fortinet FCP_FMG_AD-7.4 Certification Exam, but the acute anxiety and the excessive burden also make the candidate nervous to qualify for the FCP - FortiManager 7.4 Administrator certification. If you are going through the same tough challenge, do not worry because Fortinet is here to assist you.

Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q38-Q43):

NEW QUESTION # 38
Exhibit.
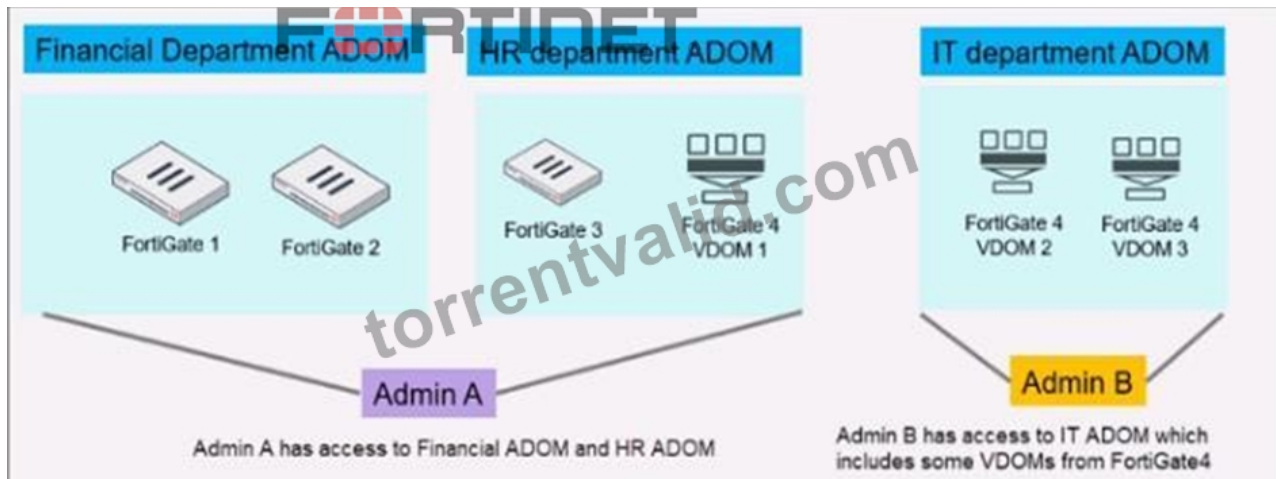

An administrator would like to create three ADOMs on FortiManager with different access levels based on departments. What two conclusions can you draw from the design shown in the exhibit? (Choose two.)

- A. Policies and objects databases can be shared between the Financial and HR ADOMs.
- B. An administrator with the super user profile can access all the VDOMs.
- C. The FortiManager administrator must set the ADOM device mode to Advanced
- D. The administrator must configure FortiManager in workspace normal mode.

Answer: B,C

Explanation:
Based on the exhibit, the FortiManager administrator is setting up three ADOMs (Administrative Domains) that correspond to different departments (Financial, HR, and IT). Each ADOM has specific FortiGate devices or VDOMs (Virtual Domains) assigned to it, with different administrators managing the ADOMs.
Explanation of Options:
* A. The FortiManager administrator must set the ADOM device mode to Advanced.
* This is true. In FortiManager, when there are VDOMs (Virtual Domains) involved, you must set the ADOM to Advanced mode to manage VDOMs properly. The IT department ADOM includes different VDOMs from FortiGate 4 (VDOM 2 and VDOM 3), which means the ADOM mode must be in Advanced to support managing VDOMs separately from other ADOMs.
* B. Policies and objects databases can be shared between the Financial and HR ADOMs.
* This is false. By default, ADOMs are separate, and policies and objects cannot be shared between them unless they are specifically designed to do so. The exhibit shows distinct ADOMs for each department, implying no direct sharing of policies and objects between Financial and HR ADOMs.
* C. An administrator with the super user profile can access all the VDOMs.
* This is true. A FortiManager administrator with the super user profile has full access to all ADOMs and VDOMs, regardless of how access is restricted for individual administrators. In this case, an admin with the super user profile could access Financial, HR, and IT ADOMs, including all the VDOMs from FortiGate 4.
* D. The administrator must configure FortiManager in workspace normal mode.
* This is false. There is no requirement mentioned in the exhibit or scenario that mandates using workspace normal mode.
Workspace mode is more related to how configuration changes are managed (locking, editing, etc.), but it doesn't affect the creation or access control of ADOMs.
Conclusion:
* A is correct because Advanced mode is necessary for managing VDOMs within ADOMs.

* C is correct because a super user can access all VDOMs and ADOMs without restrictions.

NEW QUESTION # 39
Which two items are included in the FortiManager backup? (Choose two.)

- A. Flash configuration
- B. All devices
- C. Firmware images
- D. FortiGuard database

Answer: A,B

NEW QUESTION # 40
An administrator has assigned a global policy package to custom ADOM1. Then the administrator creates a new policy package. Fortinet. in the custom ADOM1. What happens to the Fortinet policy package when it is created?

- A. You must assign the global policy package from the global ADOM.
- B. You can select the option to assign the global policies.
- C. The global policy package is automatically assigned.
- D. You must reapply the global policy package to ADOM1.

Answer: C

Explanation:
When a new policy package is created in a custom ADOM that already has a global policy package assigned, the global policy package is automatically assigned to the new policy package. This behavior ensures consistent policy enforcement across different ADOMs.
Options A, C, and D are incorrect because:
* A and C incorrectly suggest that manual reassignment or reapplication is needed.
* D implies optional assignment, whereas it is automatically done.
FortiManager References:
* Refer to FortiManager 7.4 Administrator Guide: Working with Global and Custom ADOM Policy Packages

NEW QUESTION # 41
Refer to the exhibit.

You are using the Quick Install option to install configuration changes on the managed FortiGate.
Which two statements correctly describe the result? (Choose two.)

- A. It installs provisioning template changes on the FortiGate device.
- B. It provides the option to preview only the policy package changes before installing them.

- C. It installs device-level changes on the FortiGate device without launching the Install Wizard
- D. It installs all the changes in the device database first and the administrator must reinstall the changes on the FortiGate device.

Answer: A,C

NEW QUESTION # 42
Exhibit.
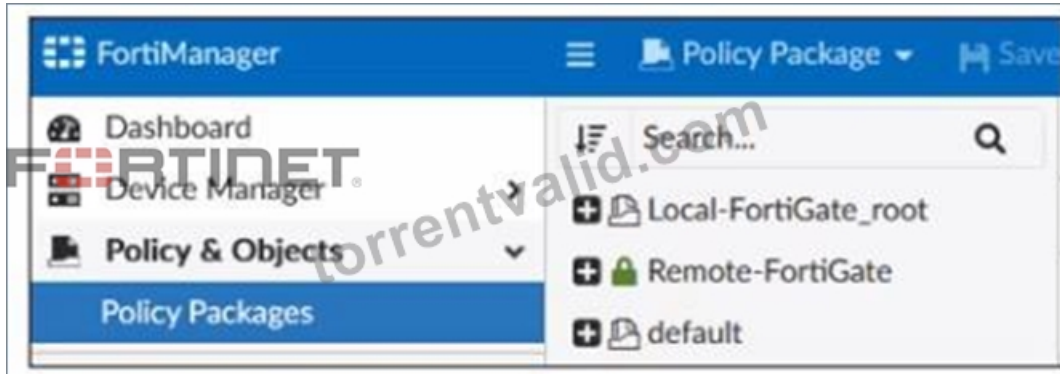

Given the configuration shown in the exhibit, which two statements are true? (Choose two.)

- A. The FortiManager ADOM is locked by the administrator.
- B. An administrator can also lock the Local-FortiGate_root policy package.
- C. The FortiManager ADOM workspace mode is set to Normal
- D. FortiManager is in workflow mode.

Answer: A,D

Explanation:
The provided screenshot from FortiManager shows several key elements that help answer the question:
* The padlock icon next to the "Remote-FortiGate" policy package indicates that this policy package is locked, which means it is currently being edited or has been checked out by an administrator. This is typical behavior when the ADOM (Administrative Domain) workspace is in use, and a session is active where an administrator is working on a policy package.
* The absence of a lock icon next to "Local-FortiGate_root" and "default" indicates that these policy packages are not locked and are available for editing.
* Statement B(FortiManager is in workflow mode): This is true. The fact that one of the policy packages is locked suggests that FortiManager is operating in ADOM workflow mode or at least in a state where it enforces locking for editing, typically seen in Normal ADOM modes. In workflow mode, an administrator needs to lock a workspace before making changes.
* Statement C(The FortiManager ADOM is locked by the administrator): This is true. The presence of the padlock on "Remote-FortiGate" signifies that the ADOM, or more specifically, this policy package within the ADOM, has been locked by the administrator.
* Statement A(An administrator can also lock the Local-FortiGate_root policy package): This is not necessarily true. The administrator can lock the "Local-FortiGate_root" policy package, but as shown in the exhibit, it is currently not locked, so this option is not a certainty in this state.
* Statement D(The FortiManager ADOM workspace mode is set to Normal): This is true, but not the best option compared to B and C, as it can be inferred that the mode is set to Normal due to the locking behavior, but the more direct information is about the ADOM being locked by an administrator.

NEW QUESTION # 43
......

You can get the authoritative FCP_FMG_AD-7.4 certification exam in first try without attending any expensive training institution classes. The main reason that makes you get succeed is the accuracy of our FCP_FMG_AD-7.4 test answers and the current exam pass guide. We provide you the Latest FCP_FMG_AD-7.4 Dumps Pdf for exam preparation and also the valid study guide for the organized review. You can completely trust our learning materials.
