## **100% Pass Fantastic CompTIA - Top CS0-003 Dumps**

Don't let the CS0-003 exam stress you out! Prepare with Exam4Tests CS0-003 exam dumps and boost your confidence in the real CS0-003 exam. We ensure your road towards success without any mark of failure. Time is of the essence - don't wait to ace your CS0-003 Certification Exam! Register yourself now.

## **CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q119-Q124):**

### NEW QUESTION # 119

An organization's Chief Information Security Officer (CISO) is organizing a tabletop drill. The CISO has included several other executives in the meeting invitation for the drill, as required.

Which of the following is the best reason for including the Chief Communications Officer?

- A. All parties must be able to communicate clearly, concisely, and consistently during incident response.
- **B. Deciding when and how to issue press releases regarding incidents can minimize damage to the organization's brand reputation.**
- C. The CISO would like to increase the security department's visibility to senior executives.
- D. All of the organization's high-level executives should know about the IT department's incident response plan.

**Answer: B**

Explanation:

The Chief Communications Officer is responsible for managing external communications, including press releases and public messaging. Involving this role in a tabletop exercise ensures that decisions about when and how to communicate incidents are planned to protect the organization's brand reputation.

### NEW QUESTION # 120

The developers recently deployed new code to three web servers. A daffy automated external device scan report shows server vulnerabilities that are failure items according to PCI DSS.

If the vulnerability is not valid, the analyst must take the proper steps to get the scan clean.

If the vulnerability is valid, the analyst must remediate the finding.

After reviewing the information provided in the network diagram, select the STEP 2 tab to complete the simulation by selecting the correct Validation Result and Remediation Action for each server listed using the drop-down options.

INSTRUCTIONS:

The simulation includes 2 steps.

Step 1: Review the information provided in the network diagram and then move to the STEP 2 tab.

STEP 2: Given the Scenario, determine which remediation action is required to address the vulnerability.

**Answer:**

Explanation:

### NEW QUESTION # 121

During normal security monitoring activities, the following activity was observed:

```
cd C:\Users\Documents\HR\Employees  
takeown/f.*
```

SUCCESS:

Which of the following best describes the potentially malicious activity observed?

- A. Registry changes or anomalies
- B. Data exfiltration
- C. File configuration changes
- **D. Unauthorized privileges**

**Answer: D**

Explanation:

The takeown command is used to take ownership of a file or folder that previously was denied access to the current user or group.

The activity observed indicates that someone has taken ownership of all files and folders under the C:\Users\Documents\HR\Employees directory, which may contain sensitive or confidential information.

This could be a sign of unauthorized privileges, as the user or group may not have the legitimate right or need to access those files or folders.

Taking ownership of files or folders could also enable the user or group to modify or delete them, which could affect the integrity or availability of the data.

### NEW QUESTION # 122

A SOC manager reviews metrics from the last four weeks to investigate a recurring availability issue. The manager finds similar events correlating to the times of the reported issues.

Which of the following methods would the manager most likely use to resolve the issue?

- A. Vulnerability assessment
- **B. Root cause analysis**
- C. Recurrence reports
- D. Lessons learned

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation:

Root Cause Analysis (RCA) is the best approach to identify and resolve the underlying cause of recurring incidents. It involves a systematic investigation of logs, configurations, and operational data to pinpoint the reason behind persistent security issues.

\* Option A (Vulnerability assessment) helps identify security weaknesses but does not focus on recurring operational issues.

\* Option C (Recurrence reports) track patterns but do not resolve the root cause.

\* Option D (Lessons learned) is valuable but is typically a post-mortem discussion rather than an investigative method.

Thus, B is the correct answer, as root cause analysis is the best approach for diagnosing recurring availability issues.

### NEW QUESTION # 123

An analyst is examining events in multiple systems but is having difficulty correlating data points. Which of the following is most likely the issue with the system?

- A. Network segmentation
- B. Access rights
- C. Invalid playbook
- **D. Time synchronization**

**Answer: D**

Explanation:

Time synchronization is the process of ensuring that all systems in a network have the same accurate time, which is essential for correlating data points from different sources. If the system has an issue with time synchronization, the analyst may have difficulty matching events that occurred at the same time or in a specific order. Access rights, network segmentation, and invalid playbook are not directly related to the issue of correlating data points.
