

# Hot Pdf Analytics-Arch-201 Version Free PDF | High Pass-Rate Analytics-Arch-201 Test Dumps Free: Salesforce Certified Tableau Architect

The objective of Analytics-Arch-201 is to assist candidates in preparing for the Salesforce Certified Tableau Architect (Analytics-Arch-201) certification test by equipping them with the actual Salesforce Analytics-Arch-201 questions PDF and Analytics-Arch-201 practice exams to attempt the prepare for your Analytics-Arch-201 Exam successfully. The Salesforce Certified Tableau Architect (Analytics-Arch-201) practice material comes in three formats, desktop Analytics-Arch-201 practice test software, web-based Analytics-Arch-201 practice exam, and Analytics-Arch-201 Dumps PDF that cover all exam topics.

## Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Deploy Tableau Server:</b> This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Monitor and Maintain a Tableau Deployment:</b> This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Design a Tableau Infrastructure:</b> This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.</li> </ul>

## **Analytics-Arch-201 Test Dumps Free & Analytics-Arch-201 Certification Exam Cost**

Close to 100% passing rate is the best gift that our customers give us. We also hope our Analytics-Arch-201 exam materials can help more ambitious people pass Analytics-Arch-201 exam. Our professional team checks the update of every exam materials every day, so please rest assured that the Analytics-Arch-201 Exam software you are using must contain the latest and most information.

### **Salesforce Certified Tableau Architect Sample Questions (Q93-Q98):**

#### **NEW QUESTION # 93**

In configuring a Tableau Server deployment, you decide to assign a background process to a specific node. What is the primary reason for dedicating a node to the background process?

- A. To enable easier maintenance and updates of the background process without affecting other services
- B. To allow direct access to the database server from the background node
- C. To enhance the security of sensitive data processed in the background tasks
- **D. To improve performance by isolating resource-intensive tasks from user-facing operations**

**Answer: D**

Explanation:

To improve performance by isolating resource-intensive tasks from user-facing operations. Dedicating a node to the background process in Tableau Server is primarily done to isolate resource-intensive tasks, such as data extraction and subscription tasks, from user-facing operations. This separation helps in optimizing performance by ensuring that the background's demand on system resources does not impact the responsiveness or efficiency of the user interface and vice versa. Option A is incorrect because while security is important, it is not the primary reason for dedicating a node to the background process. Option C is incorrect as direct database access from the background node is not the main factor in this configuration decision. Option D is incorrect because while easier maintenance is a benefit, it is not the primary reason for isolating the back-grounder process on a specific node.

#### **NEW QUESTION # 94**

A corporation with critical business operations using Tableau Server needs a disaster recovery strategy. Which approach best ensures business continuity and data integrity in case of a system failure?

- A. Limiting backups to only the most important dashboards and data sources
- B. Relying solely on periodic manual backups of the Tableau Server data
- C. Using only cloud-based auto-save features without any additional backup mechanisms
- **D. Implementing a strategy that includes regular automated backups, off-site storage, and a standby Tableau Server**

**Answer: D**

Explanation:

Implementing a strategy that includes regular automated backups, off-site storage, and a standby Tableau Server. A comprehensive disaster recovery strategy with automated backups, off-site storage, and a standby server provides robust protection against data loss and ensures business continuity in case of a failure. Option A is incorrect because periodic manual backups may not be frequent or reliable enough for critical business operations. Option C is incorrect as relying solely on cloud-based auto-save features doesn't

provide a comprehensive recovery solution. Option D is incorrect because limiting backups to certain elements risks losing critical data not deemed 'important' at the time of backup.

#### NEW QUESTION # 95

You are configuring an external file store for a Tableau Server deployment. Which of the following steps is essential to ensure that Tableau Server can access the external file store?

- A. Increase the virtual memory of the Tableau Server to accommodate the external file store
- **B. Set up network shared storage that is accessible by all nodes in the cluster**
- C. Configure the file store to be accessible via FTP
- D. Enable SSL on the Tableau Server for secure data transfer

**Answer: B**

Explanation:

Set up network shared storage that is accessible by all nodes in the cluster For Tableau Server to utilize an external file store effectively, it's crucial to set up a network shared storage solution that is accessible by all nodes in the cluster. This ensures that data is readily available to all components of the Tableau Server, maintaining consistency and reliability in data access and management. Option A is incorrect because configuring FTP access is not a standard or secure method for integrating an external file store with Tableau Server. Option B is incorrect as enabling SSL on the Tableau Server, while important for security, does not directly relate to the accessibility of the external file store. Option D is incorrect since increasing the virtual memory of the Tableau Server does not affect its ability to access an external file store.

#### NEW QUESTION # 96

An organization needs to migrate its Tableau Server to a new physical server due to hardware up-grades. What factor should be prioritized to minimize downtime and data loss?

- A. Transferring only the most essential dashboards and rebuilding the rest on the new server
- B. Migrating the server during peak business hours to immediately test the performance
- **C. Planning the migration process with thorough backups and a clear rollback plan**
- D. Changing the underlying database structure during the migration to improve performance

**Answer: C**

Explanation:

Planning the migration process with thorough backups and a clear rollback plan A well-planned migration with backups and a rollback plan is crucial to minimize downtime and ensure data integrity, allowing for recovery in case of unforeseen issues during the migration. Option A is incorrect as migrating during peak business hours can lead to significant disruptions. Option C is incorrect because transferring only essential dashboards and rebuilding others is time-consuming and risks data loss. Option D is incorrect as changing the database structure during migration is risky and may not necessarily lead to performance improvements.

#### NEW QUESTION # 97

When recommending an automated deployment method for Tableau Server updates, which approach is most effective in ensuring minimal disruption and consistent application across a large organization?

- A. Setting up an internal website where administrators can download updates at their convenience
- **B. Using a network management tool like Microsoft SCCM to automate and standardize the deployment of updates**
- C. Relying on manual installation by each server administrator to ensure individual control
- D. Employing email notifications to prompt administrators to download and install updates individually

**Answer: B**

Explanation:

Using a network management tool like Microsoft SCCM to automate and standardize the deployment of updates Utilizing a network management tool such as Microsoft System Center Configuration Manager (SCCM) is the most effective approach for automating and standardizing Tableau Server updates in a large organization. This method ensures that updates are applied consistently across all servers, reduces the risk of human error, and minimizes disruption to operations. Option A is incorrect because manual installation by each server administrator is time-consuming and prone to inconsistency. Option C is incorrect as email notifications rely on

manual action by administrators, which can lead to delays and inconsistency in updates. Option D is incorrect because setting up an internal website for downloading updates does not ensure timely or standardized application across the organization.

## NEW QUESTION # 98

.....

There is a succession of anecdotes, and there are specialized courses. Experts call them experts, and they must have their advantages. They are professionals in every particular field. The Analytics-Arch-201 test material, in order to enhance the scientific nature of the learning platform, specifically hired a large number of qualification exam experts, composed of product high IQ team, these experts by combining his many years teaching experience of Analytics-Arch-201 Quiz guide and research achievements in the field of the test, to exam the popularization was very complicated content of Salesforce Certified Tableau Architect exam dumps, better meet the needs of users of various kinds of cultural level.
