SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite Sample Questions (Q53-Q58):

NEW QUESTION # 53

What is the role of SAP AI Core in Business AI solutions?

Please choose the correct answer.

Response:

- A. It provides an infrastructure for developing and running AI models.
- B. It is a hardware-based AI computing solution.
- C. It is used for HR management exclusively.
- D. It replaces all manual business processes.

Answer: A

NEW QUESTION # 54

What are the key Business AI patterns? Note: There are 3 correct answers to this question.

- A. Insight Apps, Data for AI
- B. Custom Generative AI Extensions
- C. Digital Assistants with SAP
- D. AI Lifecycle Management
- E. Enterprise Automation

Answer: A,C,E

Explanation:

SAP Business AI is structured around key patterns that define how AI is applied across business processes.

The correct answers are Digital Assistants with SAP, Enterprise Automation, and Insight Apps, Data for AI, as these are explicitly documented as core Business AI patterns in SAP's framework.

SAP documentation states: "SAP Business AI is built around key patterns that enable organizations to leverage AI effectively: Digital Assistants with SAP, Enterprise Automation, and Insight Apps, Data for AI." Digital Assistants with SAP, exemplified by Joule, provide "natural language interfaces to interact with business processes," enhancing user productivity. Enterprise Automation involves "using AI-driven automation, such as SAP Intelligent RPA, to streamline repetitive tasks and optimize workflows" across functions like finance and supply chain. Insight Apps, Data for AI refers to "delivering predictive analytics and data-driven insights" through applications like SAP S/4HANA, which support decision-making with real-time data.

The incorrect options-AI Lifecycle Management and Custom Generative AI Extensions-are not listed as primary Business AI patterns. AI Lifecycle Management is a technical process for managing AI models, not a business pattern. Custom Generative AI Extensions, while emerging, are not a core pattern in SAP's current Business AI framework, which focuses on established use cases. SAP's emphasis on these patterns, as seen in its AI strategy, confirms the selected answers.

NEW QUESTION # 55

(What are some generative AI tools for an SAP Cloud ERP transformation? Note: There are 3 correct answers to this question.)

- A. Integration generator
- B. Extension builder wizard
- C. Process automation
- D. ABAP Business Object generator
- E. Process model generator

Answer: C,D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: Generative AI tools for SAP Cloud ERP transformation include process automation capabilities in SAP Build Process Automation for generating and automating business processes, the process model generator in SAP Signavio for creating process models using AI, and the ABAP Business Object generator in Joule for developing ABAP-based business objects to extend ERP functionalities. These tools facilitate efficient migration, customization, and optimization during cloud ERP transformations by leveraging generative AI to streamline code, processes, and extensions.

Exact extracts supporting this:

Process automation: "SAP Build Process Automation integrates with generative AI to generate and edit business processes, decisions, forms, and script tasks using natural language descriptions."sap.com This supports automation in ERP transformations.

Process model generator: "SAP Signavio uses generative AI to assist in process modeling, recommending performance indicators and generating models based on best practices."learning.sap.com

ABAP Business Object generator: "Joule generates ABAP

business objects using the ABAP RESTful Application Programming Model (RAP) for extensions in SAP S/4HANA

Cloud."learning.sap.com "Generative AI in ABAP Cloud includes business object generation."community.sap.com Other options are

incorrect because:

Option B: While extension building is simplified with wizards in SAP Build Code, it is not specifically a "generative AI tool" but rather a guided process; generative aspects come from Joule integration.

Option C: Integration generation is supported in SAP BTP, but not highlighted as a distinct generative AI tool for ERP transformation; focus is on code and process generation.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Derived from

SAP Learning Journey "Boosting Your Cloud Transformation Journey with SAP Business AI and Generative AI," units on

generative AI in SAP Signavio, Build Process Automation, and ABAP Cloud. Supported by SAP Community blogs on generative

AI for S/4HANA migration and SAP Help Portal, aligning with C_BCBAI_2502 certification for tools in cloud ERP

transformations.
