

100% Pass 2026 VMware 3V0-23.25: Advanced VMware Cloud Foundation 9.0 Storage—Valid Exam Registration

Up to now, we have successfully issued three packages for you to choose. They are PDF version, online test engines and windows software of the 3V0-23.25 practice prep. The three packages can guarantee you to pass the exam for the first time. Though the content is the same with all versions of the 3V0-23.25 Study Materials, the displays are totally different. And every display has its advantage to cater to different people according to their interest and hobbies. You may choose the right version of our 3V0-23.25 exam questions.

Different from other similar education platforms, the 3V0-23.25 quiz guide will allocate materials for multi-plate distribution, rather than random accumulation without classification. How users improve their learning efficiency is greatly influenced by the scientific and rational design and layout of the learning platform. The Advanced VMware Cloud Foundation 9.0 Storage prepare torrent is absorbed in the advantages of the traditional learning platform and realize their shortcomings, so as to develop the 3V0-23.25 test material more suitable for users of various cultural levels. If just only one or two plates, the user will inevitably be tired in the process of learning on the memory and visual fatigue, and the 3V0-23.25 test material provided many study parts of the plates is good enough to arouse the enthusiasm of the user, allow the user to keep attention of highly concentrated.

[Technology] VMware 3V0-23.25 Exam Dumps For Good Success 2026

Using computer-aided software to pass the VMware 3V0-23.25 exam has become a new trend. Because the new technology enjoys a distinct advantage, that is convenient and comprehensive. In order to follow this trend, our company product such as Advanced VMware Cloud Foundation 9.0 Storage 3V0-23.25 Exam Questions that can bring you the combination of traditional and novel ways of studying.

VMware Advanced VMware Cloud Foundation 9.0 Storage Sample Questions (Q78-Q83):

NEW QUESTION # 78

A Compliance Auditor is validating that a VCF Workload Domain meets the "Continuous Key Rotation" requirements of a strict

financial standard (e.g., SOX/PCI).

The auditor examines the vCenter logs surrounding the Data-in-Transit (DiT) configuration.

...

[Log Analysis: vpxd.log]

2026-11-20T12:00:00Z INFO vpxd - [DiT] Rekey interval expired (1440 minutes).

2026-11-20T12:00:01Z INFO vpxd - [DiT] Ephemeral session keys successfully renegotiated between [esx-03] and [esx-05].

2026-11-20T12:00:02Z INFO vpxd - [DiT] Old key buffer purged.

...

How does the DiT key rotation architecture satisfy compliance without relying on external KMS administrators? (Select all that apply.)

- A. The ESXi hosts must temporarily pause cluster write operations (Congestion) for 30 seconds to synchronize the new symmetric keys.
- B. DiT keys are automatically persisted to the vCenter database as backup material before deletion, ensuring forensic accountability.
- C. The default "Rekey Interval" for DiT is 1440 minutes (24 hours). The ESXi hosts automatically perform a new Diffie-Hellman handshake every day to create a completely new session key, making brute-force decryption of historical traffic impossible.
- D. The RekeyInterval can be aggressively modified via API (e.g., to 60 minutes) to meet stricter compliance rules, without causing any disruption to the active storage traffic.
- E. Key rotation occurs instantly at the packet layer; the DOM Client creates a new key for every single 4KB block written.

Answer: C,D

NEW QUESTION # 79

An L3 Support Engineer is analyzing the state of a VM scheduled for imminent SRM migration. The VM uses both Local Protection (vSAN FTT=1) and Remote Protection (vSphere Replication).

The engineer runs an esxcli query on the local host to check the object health.

...

```
[root@esx-03:~] esxcli vsan debug object list -u 554350...
```

```
Object UUID: 554350... (SRM-Web-01)
```

```
Policy: FTT=1 (RAID-1)
```

```
Component 1: ACTIVE (esx-03)
```

```
Component 2: ABSENT (esx-05 - Host Unreachable)
```

```
Witness: ACTIVE (esx-06)
```

```
vSphere Replication State: OK (RPO 15m)
```

...

Based on the intersection of the local vSAN state and the remote vSphere Replication mechanics, which TWO operational behaviors are accurate for this degraded object? (Choose 2.)

- A. The VM remains fully operational on the primary site because the local vSAN object maintains quorum (2 of 3 votes are ACTIVE).
- B. The SRM failover is blocked because the local "ABSENT" flag prevents the vCenter database from un-registering the VM.
- C. SRM can still successfully failover this VM to the remote site, because the asynchronous vSphere Replication engine continues copying data from the ACTIVE Component 1.
- D. vSphere Replication is automatically suspended because the replication agent cannot read from degraded FTT=1 components.
- E. The ESXi host must wait for the ABSENT component to finish rebuilding (60-minute CLOM timer) before standard I/O resumes.

Answer: A,C

NEW QUESTION # 80

In a symmetrical vSAN Stretched Cluster configuration, both the Primary Data Center (Site A) and the Secondary Data Center (Site B) have active compute and storage resources.

Why does the vSAN architectural specification strictly require the administrator to manually designate one specific site as the "Preferred Fault Domain"?

- A. It dictates the direction of the asynchronous replication; data must always be written to the Preferred site first before being staged to the Secondary site.
- B. If the network link to the Witness Appliance fails (a dual-site partition), the cluster needs an automated tie-breaker; the Distributed Object Manager (DOM) will automatically keep the "Preferred" site active and freeze the "Secondary" site to prevent split-brain.
- C. The "Preferred" site tag enables the log-structured filesystem; the Secondary site is forced to run standard block mode until a failover occurs.
- D. The Preferred site is the only site allowed to run the vCenter Server Appliance; the Secondary site is strictly a compute-only disaster recovery target.

Answer: B

NEW QUESTION # 81

A VCF Architect is using SDDC Manager to create a VI Workload Domain that will immediately be configured as a vSAN Stretched Cluster.

To achieve this, the architect must coordinate the baseline Workload Domain creation with the specific Stretched Cluster network prerequisites. The architect reviews the prepared configuration:

```
...  
[Network Configuration - WLD-03]  
vSAN Network Segment (Site A): 192.168.10.0/24 (MTU 9000)  
vSAN Network Segment (Site B): 192.168.20.0/24 (MTU 9000)  
Witness Network Segment: 192.168.100.0/24 (MTU 1500)  
Static Routes: Site A/B vSAN networks <-> Witness network  
License: vSAN Enterprise Applied  
...
```

Which of the following actions and configurations are REQUIRED to successfully integrate the SDDC Manager workflow with the Stretched Cluster deployment? (Select all that apply.)

- A. The VI Workload Domain must first be deployed as a standard single-site cluster in SDDC Manager before it can be converted into a Stretched Cluster via day-2 operations.
- B. The vSAN Network Segment (Site B) must be placed on a separate Layer 2 VLAN from Site A, meaning static routes must be configured on the hosts for cross-site vSAN communication.
- C. The Witness Appliance must be imported and registered into SDDC Manager inventory prior to running the Workload Domain creation wizard.
- D. The vSAN License assigned during the Workload Domain creation must be 'vSAN Enterprise' or higher to support the Stretched Cluster topology.

Answer: A,B,D

NEW QUESTION # 82

A VCF Architect is using the SDDC Manager API to deploy a massive "Shared Witness" topology. The goal is to support 40 independent 2-Node vSAN ROBO clusters using a single, large Witness Appliance located in the Management Domain.

```
...  
# SDDC Manager API Specification  
{  
  "witnessSpec": {  
    "hostname": "Shared-Witness-01",  
    "size": "Extra-Large",  
    "max_components": 60000  
  },  
  "targetClusters": [ "ROBO-01", "ROBO-02", ... "ROBO-40" ]  
}
```

Which of the following statements accurately describe the architectural constraints and capabilities of the VCF Shared Witness feature? (Select all that apply.)

- A. A single "Extra-Large" Shared Witness appliance can support up to 64 distinct 2-Node clusters, consolidating up to 64,000 metadata components into one VM.
- B. All 40 ROBO clusters mapped to the Shared Witness must be running the exact same vSAN Architecture (either all OSA or all ESA) and identical ESXi versions to maintain CMMDS compatibility.
- C. Shared Witness is strictly supported for standard 2-Node ROBO configurations; it cannot be used to consolidate witnesses for full 3+3 node Stretched Clusters.
- D. If the single Shared Witness appliance crashes, all 40 ROBO clusters will immediately suffer a datastore lockout and the edge VMs will become Inaccessible.
- E. Shared Witness requires SDDC Manager to deploy the appliance directly onto AWS EC2 instances, as on-premises VCF datastores cannot support the combined IOPS load.

NEW QUESTION # 83

.....

The most important thing for preparing the 3V0-23.25 exam is reviewing the essential point. Some students learn all the knowledge of the test. They still fail because they just remember the less important point. In order to service the candidates better, we have issued the 3V0-23.25 test engine for you. Our company has accumulated so much experience about the test. So we can predict the real test precisely. Almost half questions and answers of the real exam occur on our 3V0-23.25 practice material. That means if you study our study guide, your passing rate is much higher than other candidates. Preparing the 3V0-23.25 exam has shortcut. From now, stop learning by yourself and try our test engine. All your efforts will pay off one day.
