

Ping Identity PAP-001 Certification Training | Latest PAP-001 Real Test

2026 Latest DumpsReview PAP-001 PDF Dumps and PAP-001 Exam Engine Free Share: https://drive.google.com/open?id=1p9bFha75p_GLJMPROfj032cnVWNerKKei

DumpsReview online digital Ping Identity PAP-001 exam questions are the best way to prepare. Using our Ping Identity PAP-001 exam dumps, you will not have to worry about whatever topics you need to master. To practice for a Ping Identity PAP-001 Certification Exam in the software (free test), you should perform a self-assessment.

I think our PAP-001 test torrent will be a better choice for you than other study materials. We all know that most candidates will worry about the quality of our product, In order to guarantee quality of our study materials, all workers of our company are working together, just for a common goal, to produce a high-quality product; it is our PAP-001 Exam Questions. If you purchase our PAP-001 guide torrent, we can guarantee that we will provide you with quality products, reasonable price and professional after sales service.

Free PDF Quiz 2026 PAP-001: Newest Certified Professional - PingAccess Certification Training

The pass rate is 98%, and we also pass guarantee if you buy PAP-001 study materials of us. We have received many good feedbacks of the PAP-001 exam dups. You also enjoy free update for one year after your payment, and if you have any questions about the PAP-001 Exam Dumps, just ask our online service stuff, they will give a reply immediately, or you can send email to us, we will answer you as quickly as we can. Therefore, just contact us if you have the confusions about the PAP-001 study materials.

Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Product Overview: This section of the exam measures skills of Security Administrators and focuses on understanding PingAccess features, functionality, and its primary use cases. It also covers how PingAccess integrates with other Ping products to support secure access management solutions.
Topic 2	<ul style="list-style-type: none"> • Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.
Topic 3	<ul style="list-style-type: none"> • General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.
Topic 4	<ul style="list-style-type: none"> • General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.
Topic 5	<ul style="list-style-type: none"> • Installation and Initial Configuration: This section of the exam measures skills of System Engineers and reviews installation prerequisites, methods of installing or removing PingAccess, and securing configuration database passwords. It explains the role of run.properties entries and outlines how to set up a basic on-premise PingAccess cluster.

Ping Identity Certified Professional - PingAccess Sample Questions (Q61-Q66):

NEW QUESTION # 61

A business application must be accessible via two FQDNs. Which PingAccess functionality should an administrator use to meet this requirement?

- A. Sites
- B. Web Sessions
- C. Applications
- **D. Virtual Hosts**

Answer: D

Explanation:

Virtual Hosts in PingAccess define the external FQDNs (and ports) through which applications are accessed. An application can be bound to multiple virtual hosts to allow access via multiple FQDNs.

Exact Extract:

"A virtual host specifies the fully qualified domain name and port number through which an application is accessed."

* Option A (Virtual Hosts) is correct - multiple FQDNs can be supported by assigning multiple virtual hosts.

* Option B (Applications) define resource protection but do not manage FQDN binding.

* Option C (Sites) define back-end targets, not the public-facing FQDN.

* Option D (Web Sessions) handle authentication state, unrelated to hostnames.

Reference: PingAccess Administration Guide - Virtual Hosts

NEW QUESTION # 62

How many administrators are supported using HTTP Basic Authentication in the Administrative Console?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

When using HTTP Basic Authentication (admin.auth=native), PingAccess only supports a single administrative account (the default admin user). For multiple administrators, SSO integration (e.g., OIDC) is required.

Exact Extract:

"When admin authentication is set to native (HTTP Basic), only one administrative user is supported. For multiple admins, configure UI authentication with an OIDC provider."

* Option A (1000) is incorrect.

* Option B (1) is correct - only one basic auth admin account.

* Option C (10) and Option D (100) are incorrect.

Reference: PingAccess Administration Guide - Admin Authentication

NEW QUESTION # 63

A business requires logs to be written to a centralized Oracle database. Which two actions must the PingAccess administrator take to enable this? (Choose 2 answers.)

- A. Copy the database driver JAR file to the PA_HOME/lib directory.
- B. Enable the Audit flag in the Resource.
- C. Remove the logs located in PA_HOME/log.
- D. Configure log4j2.xml and log4j2.db.properties.
- E. Import the database certificate into the Trusted Certificate Group.

Answer: A,D

Explanation:

PingAccess supports logging directly to a relational database using Log4j database appenders. To enable this:

* Configure log4j2.xml to use a JDBC Appender.

* Configure log4j2.db.properties with the database connection information.

* Provide the appropriate database driver in the PA_HOME/lib directory.

Exact Extract:

"To log to a database, configure log4j2.xml and log4j2.db.properties, and place the JDBC driver JAR file in PA_HOME/lib."

* Option A is correct - both files must be configured.

* Option B is incorrect - existing logs do not need removal.

* Option C is incorrect - enabling audit is unrelated to database logging.

* Option D is correct - the Oracle JDBC driver must be installed in PA_HOME/lib.

* Option E is incorrect unless TLS is used to connect to the DB, but it is not required for standard DB logging setup.

NEW QUESTION # 64

A company uses an internally based legacy PKI solution that does not adhere to the Certification Path Validation section of RFC-5280. Which configuration option needs to be enabled when creating Trusted Certificate Groups in PingAccess?

- A. Skip Certificate Date Check
- B. Deny when unable to determine revocation status
- C. Use Java Trust Store
- D. Validate disordered certificate chains

Answer: D

Explanation:

Legacy PKIs often provide certificate chains that are out of order or non-compliant with RFC-5280 path validation. PingAccess provides an option in Trusted Certificate Groups called Validate disordered certificate chains to allow chaining even if the order is not RFC-5280 compliant.

Exact Extract:

"Enable Validate disordered certificate chains when the certificate chain is not in RFC-5280 compliant order but should still be accepted."

* Option A is incorrect; using the Java trust store is unrelated to PKI ordering.

* Option B is correct - this setting allows PingAccess to process disordered certificate chains.

* Option C is incorrect; date checks are unrelated to RFC-5280 path ordering.

* Option D is incorrect; revocation status handling does not address legacy PKI ordering issues.

NEW QUESTION # 65

What is the purpose of the `admin.authconfiguration` setting?

- A. To configure SSO for the administrative user interface.
- B. To enable automatic authentication to the PingAccess administrative console.
- **C. To override the SSO configuration for the administrative user interface.**
- D. To define the method to use for authenticating to the administrative API.

Answer: C

Explanation:

The `admin.auth` setting in the `run.properties` file is used to specify a fallback authentication method for the administrative console.

Exact Extract from official documentation:

"To define a fallback administrator authentication method if the OIDC token provider is unreachable, enable the `admin.auth=`native property in the `run.properties` file. This overrides any configured administrative authentication to basic authentication." This makes it clear that the purpose of `admin.auth` is to override any configured SSO for the admin UI and enforce native (basic) authentication instead.

* Option A is incorrect because the `admin.auth` setting does not configure SSO. SSO for the admin UI is configured separately.

* Option B is incorrect because this setting does not apply to the administrative API; it specifically applies to the admin UI console.

* Option C is correct because it directly reflects the documented behavior: `admin.auth` overrides SSO configuration for the administrative UI and enables native authentication.

* Option D is incorrect because the setting does not enable automatic authentication. It still requires credentials, but falls back to basic auth.
