

Valid Test 010-160 Bootcamp - Effective Training 010-160 For Exam and Valid Linux Essentials Certificate Exam - version 1.6 Reliable Test Materials

P.S. Free & New 010-160 dumps are available on Google Drive shared by TestkingPDF: https://drive.google.com/open?id=1RGjOg_LaWGeZy-JEJrpeNFSXjJfLY5jH

Studying with Lpi 010-160 Exam Questions and understanding is not enough. Regular tests and self-evaluation are mandatory. TestkingPDF's online Lpi 010-160 Practice Test engine helps you self-evaluate anytime, anywhere. The results of these tests will make you feel confident in your studies and highlight areas you need to focus more on for the Lpi exam. TestkingPDF's approach is highly acknowledged by educationists and experts.

To prepare for the exam, candidates can take advantage of the many resources available, such as study guides, practice exams, and online courses. The Linux Essentials certification exam is an excellent way to validate your knowledge and skills in Linux and open-source software and can open up many opportunities in the IT industry.

Lpi 010-160 Exam, also known as the Linux Essentials Certificate Exam, version 1.6, is an entry-level certification exam for those who want to demonstrate their knowledge and understanding of the Linux operating system. 010-160 Exam is designed to measure a candidate's understanding of key Linux concepts, such as system architecture, command line operations, and security. 010-160 exam also tests a candidate's ability to perform basic tasks related to Linux, such as setting up user accounts, managing files and directories, and configuring networking.

Quiz Lpi - 010-160 - Linux Essentials Certificate Exam - version 1.6 Pass-Sure Valid Test Bootcamp

If the clients have any problems on our 010-160 training guide they could contact our online customer service personnel or contact us by the mails. We will reply their questions sincerely and help them solve their problems at any time since we offer service on 24/7 time format. We provide the best 010-160 Study Guide and hope our sincere service will satisfy all the clients. And our services are praised by our worthy customers who said that when they talked with us, they knew we are reliable and professional.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q76-Q81):

NEW QUESTION # 76

Which of the following DNS record types hold an IP address? (Choose two.)

- A. MX
- B. CNAME
- C. AAAA
- D. NS

- E. A

Answer: C,E

Explanation:

The DNS record types that hold an IP address are the A and AAAA records. These records are used to map a domain name to an IP address of the host, which is necessary for establishing a connection between a client and a server. The A record holds a 32-bit IPv4 address, while the AAAA record holds a 128-bit IPv6 address. For example, the A record for `www.example.com` could be:
`www.example.com IN A 192.0.2.1`

This means that the domain name `www.example.com` resolves to the IPv4 address `192.0.2.1`. Similarly, the AAAA record for `www.example.com` could be:

`www.example.com IN AAAA 2001:db8::1`

This means that the domain name `www.example.com` resolves to the IPv6 address `2001:db8::1`.

The other options are incorrect because:

NS records are used to specify the authoritative name servers for a domain. They do not hold an IP address, but a domain name of the name server. For example, the NS record for `example.com` could be:

`example.com IN NS ns1.example.com`

This means that the name server `ns1.example.com` is authoritative for the domain `example.com`.

MX records are used to specify the mail exchange servers for a domain. They do not hold an IP address, but a domain name of the mail server and a preference value. For example, the MX record for `example.com` could be:

`example.com IN MX 10 mail.example.com`

This means that the mail server `mail.example.com` has a preference value of 10 for receiving email for the domain `example.com`.

CNAME records are used to create an alias for a domain name. They do not hold an IP address, but another domain name that the alias points to. For example, the CNAME record for `www.example.com` could be:

`www.example.com IN CNAME example.com`

This means that the domain name `www.example.com` is an alias for the domain name `example.com`.

NEW QUESTION # 77

Which of the following programs are web servers? (Choose two.)

- A. Apache HTTPD
- B. Dovecot
- C. Curl
- D. Postfix
- E. NGINX

Answer: A,E

Explanation:

Explanation

A web server is a program that listens for requests from web browsers and serves web pages, images, or other resources. Apache HTTPD and NGINX are two popular web servers that can run on Linux systems. They can handle multiple protocols, such as HTTP, HTTPS, FTP, and SMTP. Postfix, Curl, and Dovecot are not web servers, but they are related to web or network services. Postfix is a mail transfer agent (MTA) that can send and receive emails. Curl is a command-line tool that can transfer data from or to a web server. Dovecot is a mail delivery agent (MDA) that can store and retrieve emails from a local mailbox. References:

NEW QUESTION # 78

What information is stored in `/etc/passwd`? (Choose three correct answers.)

- A. The username
- B. The user's storage space limit
- C. The encrypted password
- D. The user's default shell
- E. The numerical user ID

Answer: A,C,E

NEW QUESTION # 79

Which of the following directories contains information, documentation and example configuration files for installed software packages?

- A. `/usr/share/doc/`
- B. `/usr/examples/`
- C. `/etc/defaults/`
- D. `/doc/`
- E. `/var/info/`

Answer: A

Explanation/Reference:

NEW QUESTION # 80

Which of the following commands will search for the file `foo.txt` under the directory `/home`?

- A. `find /home - file foo.txt`
- B. `search /home foo.txt`
- C. `find /home -name foo.txt`
- D. `search /home -file foo.txt`
- E. `find /home foo.txt`

Answer: C

Explanation:

The correct command to search for the file `foo.txt` under the directory `/home` is `find /home -name foo.txt`. This command uses the `find` command, which is used to search for files and directories that match certain criteria. The first argument, `/home`, specifies the starting point of the search. The second argument, `-name`, indicates that the search is based on the name of the file or directory. The third argument, `foo.txt`, is the name of the file to be searched for. The `find` command will recursively search all the subdirectories under `/home` and print the path of any file or directory that matches the name `foo.txt`.

The other commands are incorrect for various reasons:

A). `search /home -file foo.txt` is incorrect because there is no such command as `search` in Linux. The correct command for searching files and directories is `find`.

B). `search /home foo.txt` is incorrect because, as mentioned above, there is no `search` command in Linux. Also, this command does not use any option to specify the search criteria, such as `-name`, `-type`, `-size`, etc.

C). `find /home - file foo.txt` is incorrect because the option `-file` is not valid. The correct option for specifying the type of file or directory is `-type`, followed by a letter that indicates the type, such as `f` for regular file, `d` for directory, `l` for symbolic link, etc. For example, `find /home -type f -name foo.txt` would search for a regular file named `foo.txt` under `/home`.

E). `find /home foo.txt` is incorrect because this command does not use any option to specify the search criteria, such as `-name`, `-type`, `-size`, etc. This command will search for any file or directory that has `foo.txt` as part of its name, not exactly as its name. For example, this command will also match a file named `barfoo.txt` or a directory named `foo.txt.bak`.
