NEW QUESTION # 91

Which value chain activity ensures a shared understanding of the current status and required direction for all products and services?

- A. Improve
- **B. Plan**
- C. Deliver and support
- D. Design and transition

Answer: B

NEW QUESTION # 92

Which BEST describes the purpose of the 'improve' value chain activity?

- A. To organize a major improvement initiative into several smaller initiatives
- B. To ensure a shared understanding of the vision and improvement direction for all products and services
- C. To make new and improved services and features available for use
- **D. To continually improve all products and services across all value chain activities**

Answer: D

Explanation:

"The purpose of the improve value chain activity is to ensure continual improvement of products, services, and practices across all value chain activities and the four dimensions of service management."

NEW QUESTION # 93

In ITIL 4, what is the official purpose of the "improve" value chain activity?

- A. Ensure a shared understanding of the improvement direction for services across the organization
- B. Ensure services continually meet expectations for quality, costs, and time to market
- C. Ensure continual engagement and good relationships with all stakeholders
- **D. Ensure the continual improvement of practices across all value chain activities**

Answer: D

Explanation:

In ITIL 4, the 'improve' value chain activity is part of the service value chain within the service value system.

Its official purpose is to ensure continual improvement of products, services, and practices across all value chain activities and the four dimensions of service management.

Option A matches the core wording of this purpose:

"Ensure the continual improvement of practices across all value chain activities." Even though the full ITIL statement also mentions products, services, and the four dimensions of service management, this option is the only one that directly reflects the continual improvement focus of the improve activity across the value chain.

Why the other options are not correct:

* B. Ensure services continually meet expectations for quality, costs, and time to market This is more aligned with design and transition, obtain/build, and deliver and support, which focus on planning, building, and delivering services that meet agreed requirements, costs, and time constraints.

* C. Ensure a shared understanding of the improvement direction for services across the organization This sounds closer to guiding principles or governance, and to some aspects of service level management and continual improvement planning, but it is not the formal purpose statement of the improve value chain activity.

* D. Ensure continual engagement and good relationships with all stakeholders This aligns strongly with the engage value chain activity, whose purpose is about understanding stakeholder needs, ensuring transparency, and maintaining relationships.

Therefore, A is the correct option because it directly reflects the official purpose of the 'improve' value chain activity in ITIL 4.
