

# DP-600최신업데이트버전덤프공부 & DP-600높은통과율덤프공부자료

그 외, PassTIP DP-600 시험 문제집 일부가 지금은 무료입니다: <https://drive.google.com/open?id=1LHFcC48llSrx2C9CEaFNtWKHmjPpC48V>

Microsoft DP-600인증덤프는 실제 DP-600시험의 가장 최근 시험의 기출문제를 기준으로 하여 만들어진 최고품질의 자랑하는 최고적중율의 시험대비자료입니다. 저희 DP-600덤프로 DP-600시험에 도전해보지 않으실래요? DP-600 시험에서 불합격 받을시 덤프비용은 환불해드리기에 부담없이 구매하셔도 됩니다.환불의 유일한 기준은 불합격 성적표이고 환불유효기간은 구매일로부터 60일까지입니다.

## Microsoft DP-600 시험요강:

| 주제   | 소개                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 주제 1 | <ul style="list-style-type: none"><li>Implement and manage semantic models: This section of the exam measures the skills of architects and focuses on designing and optimizing semantic models to support enterprise-scale analytics. It evaluates understanding of storage modes and implementing star schemas and complex relationships, such as bridge tables and many-to-many joins. Architects must write DAX-based calculations using variables, iterators, and filtering techniques. The use of calculation groups, dynamic format strings, and field parameters is included. The section also includes configuring large semantic models and designing composite models. For optimization, candidates are expected to improve report visual and DAX performance, configure Direct Lake behaviors, and implement incremental refresh strategies effectively.</li></ul>                                                                                                           |
| 주제 2 | <ul style="list-style-type: none"><li>Maintain a data analytics solution: This section of the exam measures the skills of administrators and covers tasks related to enforcing security and managing the Power BI environment. It involves setting up access controls at both workspace and item levels, ensuring appropriate permissions for users and groups. Row-level, column-level, object-level, and file-level access controls are also included, alongside the application of sensitivity labels to classify data securely. This section also tests the ability to endorse Power BI items for organizational use and oversee the complete development lifecycle of analytics assets by configuring version control, managing Power BI Desktop projects, setting up deployment pipelines, assessing downstream impacts from various data assets, and handling semantic model deployments using XMLA endpoint. Reusable asset management is also a part of this domain.</li></ul> |
| 주제 3 | <ul style="list-style-type: none"><li>Prepare data: This section of the exam measures the skills of engineers and covers essential data preparation tasks. It includes establishing data connections and discovering sources through tools like the OneLake data hub and the real-time hub. Candidates must demonstrate knowledge of selecting the appropriate storage type—lakehouse, warehouse, or eventhouse—depending on the use case. It also includes implementing OneLake integrations with Eventhouse and semantic models. The transformation part involves creating views, stored procedures, and functions, as well as enriching, merging, denormalizing, and aggregating data. Engineers are also expected to handle data quality issues like duplicates, missing values, and nulls, along with converting data types and filtering. Furthermore, querying and analyzing data using tools like SQL, KQL, and the Visual Query Editor is tested in this domain.</li></ul>     |

## 시험대비에 가장 적합한 DP-600최신 업데이트버전 덤프공부 인증덤프자료

네트워크 전성기에 있는 지금 인터넷에서Microsoft 인증DP-600시험자료를 많이 검색할수 있습니다. 하지만 왜 PassTIP덤프자료만을 믿어야 할가요? PassTIP덤프자료는 실제시험문제의 모든 유형에 근거하여 예상문제를 묶어 둔 문제은행입니다.시험적중율이 거의 100%에 달하여Microsoft 인증DP-600시험을 한방에 통과하도록 도와드립니다.

### 최신 Microsoft Certified DP-600 무료샘플문제 (Q59-Q64):

#### 질문 # 59

You have a Fabric tenant that contains a Microsoft Power BI report named Report 1.

Report1 is slow to render. You suspect that an inefficient DAX query is being executed.

You need to identify the slowest DAX query, and then review how long the query spends in the formula engine as compared to the storage engine.

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

| Actions                                                              | Answer Area |
|----------------------------------------------------------------------|-------------|
| View the Server Timings tab.                                         |             |
| From Performance analyzer, capture a recording.                      |             |
| Enable Query Timings and Server Timings. Run the query.              |             |
| View the Query Timings tab.                                          |             |
| Sort the Duration (ms) column in descending order by DAX query time. |             |
| Copy the first query to DAX Studio.                                  |             |

정답:

설명:

Actions

|                                                                      |
|----------------------------------------------------------------------|
| View the Server Timings tab.                                         |
| From Performance analyzer, capture a recording.                      |
| Enable Query Timings and Server Timings. Run the query.              |
| View the Query Timings tab.                                          |
| Sort the Duration (ms) column in descending order by DAX query time. |
| Copy the first query to DAX Studio.                                  |

Answer Area

|                                                                      |
|----------------------------------------------------------------------|
| From Performance analyzer, capture a recording.                      |
| View the Server Timings tab.                                         |
| Enable Query Timings and Server Timings. Run the query.              |
| View the Query Timings tab.                                          |
| Sort the Duration (ms) column in descending order by DAX query time. |

### 질문 # 60

You have source data in a folder on a local computer.

You need to create a solution that will use Fabric to populate a data store. The solution must meet the following requirements:

- \* Support the use of dataflows to load and append data to the data store.
- \* Ensure that Delta tables are V-Order optimized and compacted automatically.

Which type of data store should you use?

- A. a KQL database
- B. an Azure SQL database
- C. a warehouse
- D. a lakehouse

정답: C,D

설명:

A lakehouse (A) is the type of data store you should use. It supports dataflows to load and append data and ensures that Delta tables are Z-Order optimized and compacted automatically. References = The capabilities of a lakehouse and its support for Delta tables are described in the lakehouse and Delta table documentation.

### 질문 # 61

You have a Fabric workspace named Workspace1 that contains a lakehouse named Lakehouse1.

In Workspace1, you create a data pipeline named Pipeline1.

You have CSV files stored in an Azure Storage account.

You need to add an activity to Pipeline1 that will copy data from the CSV files to Lakehouse1. The activity must support Power Query M formula language expressions.

Which type of activity should you add?

- A. Copy data
- B. Script
- C. Dataflow
- D. Notebook

정답: C

설명:

The requirement is to copy data from CSV files in Azure Storage into a Fabric Lakehouse, and it must support Power Query M formula language.

Dataflow activity in Fabric pipelines allows you to use Power Query Online, which is based on the M formula language.

Notebook uses Spark (Python, PySpark, Scala, SQL), not M.

Copy data activity moves data but does not support Power Query M transformations.

Script is for T-SQL or stored procedure execution, not M.

Therefore, the correct activity is Dataflow.

Reference: Dataflows in Microsoft Fabric

### 질문 # 62

Hotspot Question

You have a Fabric warehouse that contains a table named Sales.Orders. Sales.Orders contains the following columns.

| Name       | Data type      | Nullable |
|------------|----------------|----------|
| OrderID    | Integer        | No       |
| CustomerID | Integer        | No       |
| OrderDate  | Date           | No       |
| Quantity   | Integer        | Yes      |
| Weight     | Decimal(18, 3) | Yes      |
| ListPrice  | Decimal(18, 2) | No       |
| SalePrice  | Decimal(18, 2) | Yes      |

You need to write a T-SQL query that will return the following columns.

| Name       | Description                                                          |
|------------|----------------------------------------------------------------------|
| OrderID    | Returns OrderID                                                      |
| CustomerID | Returns CustomerID                                                   |
| PeriodDate | Returns a date representing the first day of the month for OrderDate |
| DayName    | Returns the name of the day for OrderDate, such as Wednesday         |

How should you complete the code? To answer, select the appropriate options in the answer area.  
NOTE: Each correct answer is worth one point.

### Answer Area

SELECT OrderID, CustomerID,

DATE\_BUCKET  
DATEFROMPARTS  
DATEPART  
DATETRUNC

(month, OrderDate) AS PeriodDate,

DATENAME(

day  
dayofyear  
weekday

, OrderDate) AS DayName

FROM Sales.Orders;

정답:

설명:

### Answer Area

SELECT OrderID, CustomerID,

DATE\_BUCKET  
DATEFROMPARTS  
DATEPART  
DATETRUNC

(month, OrderDate) AS PeriodDate,

DATENAME(

day  
dayofyear  
weekday

, OrderDate) AS DayName

FROM Sales.Orders;

### 질문 # 63

## You have a Fabric tenant

You plan to create a data pipeline named Pipeline1. Pipeline1 will include two activities that will execute in sequence. You need to ensure that a failure of the first activity will NOT block the second activity. Which conditional path should you configure between the first activity and the second activity?

- A. Upon Skip
- B. Upon Failure
- C. Upon Success
- D. Upon Completion

**정답: D**

### 질문 # 64
