Our company has always been following the trend of the Integration-Architect Certification. The content of our Integration-Architect practice materials is chosen so carefully that all the questions for the exam are contained. And our Integration-Architect study materials have three formats which help you to read, test and study anytime, anywhere. This means with our products you can prepare for exams efficiently. If you desire a Salesforce certification, our products are your best choice.

Salesforce Integration-Architect Certification Exam is designed to test the expertise of the integration architects in integrating various systems with Salesforce. Salesforce Certified Integration Architect certification enables integration architects to prove their skills in designing, building, and maintaining complex integrations between Salesforce and other systems. Salesforce Certified Integration Architect certification exam is a must-have for integration architects who want to advance their career by demonstrating their proficiency in Salesforce integration.

Valid Braindumps Integration-Architect Ppt & Integration-Architect Reliable Exam Registration

Now you do not need to worry about the relevancy and top standard of BraindumpsPass Salesforce Certified Integration Architect in Integration-Architect exam questions. These Salesforce Integration-Architect dumps are designed and verified by qualified Integration-Architect exam trainers. Now you can trust BraindumpsPass Integration-Architect Practice Questions and start preparation without wasting further time. With the BraindumpsPass Integration-Architect exam questions, you will get everything that you need to learn, prepare and pass the challenging Integration-Architect exam with good scores.

Salesforce Certified Integration Architect Sample Questions (Q101-Q106):

NEW QUESTION # 101

Which Web Services Description Language (WSDL) should an architect consider when creating an integration that might be used for more than one Salesforce org and different metadata?

- A. SOAP API WSDL
- **B. Partner WSDL**
- C. Enterprise WSDL

Answer: B

Explanation:

In the world of Salesforce SOAP APIs, the choice of WSDL depends on the nature of the application being built. When an architect needs to build an integration that is org-agnostic—meaning it can work across multiple different Salesforce organizations with varying

custom objects and fields-the Partner WSDL is the correct choice.

The Partner WSDL is loosely-typed. It does not contain information about an org's specific custom metadata; instead, it uses a generic sObject structure. This allows a single client application (like a third-party integration tool or a mobile app) to connect to any Salesforce org and dynamically discover its schema at runtime. Because it is not tied to a specific org's metadata, it does not need to be regenerated every time a custom field is added to one of the target orgs.

In contrast, Option A (Enterprise WSDL) is strongly-typed. It is generated specifically for one org and contains hard-coded references to that org's custom objects and fields. While this provides better compile-time safety for internal, single-org integrations, it is unsuitable for an application intended for "more than one Salesforce org" because the WSDL would be invalid for any org that doesn't have the exact same metadata.

Option C is a general term; the actual choices provided by Salesforce for integration are the Partner or Enterprise WSDLs. Therefore, for maximum flexibility and reusability across a multi-org landscape, the Partner WSDL is the industry standard.

NEW QUESTION # 102

A company has an external system that processes and tracks orders. Sales reps manage their leads and opportunity pipeline in Salesforce. In the current state, the two systems are disconnected and processing orders requires a lot of manual entry on sales rep part. This creates delays in processing orders and incomplete data due to manual entry.

As a part of modernization efforts the company decided to integrate Salesforce and the order management system. The following technical requirements were identified:

1. Orders need to be created in real time from salesforce
2. Minimal customization*, and code should be written due to a tight timeline and lack of developer resources
3. Sales reps need to be able to see order history and be able to see most up to date information on current order status.
4. Managers need to be able to run reports in Salesforce to see daily and monthly order volumes and fulfillment timelines.
5. The legacy system is hosted on premise and is currently connected to the Enterprise Service Bus (ESB). The ESB is flexible enough to provide any methods and connection types needed by salesforce team
6. There are 1000 sales reps. Each user processes/creates on average 15 orders per shift. Most of the orders contain 20-30 line items.

How should an integration architect integrate the two systems based on the technical requirements and system constraints?

- A. Use Salesforce big object, SOAP API and Dataloader.
- **B. Use Salesforce standard object, REST API and ETL.**
- C. Use Salesforce external object and OData connector.
- D. Use Salesforce custom object, custom REST API and ETL.

Answer: B

NEW QUESTION # 103

Which two requirements should the Salesforce Community Cloud support for self-registration and SSO?

Choose 2 answers

- **A. OpenId Connect Authentication Provider and Registration Handler**
- B. SAML SSO and Registration Handler
- C. OpenId Connect Authentication Provider and just-in-time provisioning
- **D. SAML SSO and just-in-time provisioning**

Answer: A,D

NEW QUESTION # 104

A subscription-based media company's system landscape forces many subscribers to maintain multiple accounts and to login more than once. An Identity and Access Management (IAM) system, which supports SAML and OpenId, was recently implemented to improve their subscriber experience through self-registration and Single Sign-On (SSO).

The IAM system must integrate with Salesforce to give new self-service customers instant access to Salesforce Community Cloud.

Which two requirements should the Salesforce Community Cloud support for self-registration and SSO?

Choose 2 answers

- **A. OpenId Connect Authentication Provider and Registration Handler**
- B. SAML SSO and Registration Handler
- C. OpenId Connect Authentication Provider and just-in-time provisioning

- D. SAML SSO and just-in-time provisioning

Answer: A,D

Explanation:

Explanation

The Salesforce Community Cloud should support OpenId Connect Authentication Provider and Registration Handler, and SAML SSO and just-in-time provisioning for self-registration and SSO. OpenId Connect is a protocol that allows users to authenticate with an external identity provider and access Salesforce resources. A registration handler is a class that implements the Auth.RegistrationHandler interface and defines how to create new users or update existing users in Salesforce from the information received from the identity provider. SAML SSO is a protocol that allows users to log in to Salesforce with a single credential from an identity provider. Just-in-time provisioning is a feature that allows creating or updating user accounts in Salesforce based on SAML assertions.

NEW QUESTION # 105

The Sales Operations team at Northern Trail Outfitters imports new leads each day. An integrated legacy territory management system assigns territories to leads before Sales team members can work on them. The current integration often experiences latency issues.

Which two recommendations should an Architect make to improve the integration performance?

Choose 2 answers

- A. Reduce batch size of asynchronous BULK API.
- B. Reduce batch size of synchronous BULK API.
- C. Legacy system should submit in parallel mode.
- D. Legacy system should submit in serial mode.

Answer: A,C

NEW QUESTION # 106

.....

We provide 24-hour online service for all customers who have purchased Integration-Architect test guide. If you buy Integration-Architect test guide, things will become completely different. Unlike other learning materials on the market, Salesforce Certified Integration Architect torrent prep has an APP version. You can download our app on your mobile phone. And then, you can learn anytime, anywhere. Whatever where you are, whatever what time it is, just an electronic device, you can do exercises. With Salesforce Certified Integration Architect torrent prep, you no longer have to put down the important tasks at hand in order to get to class; with Integration-Architect Exam Questions, you don't have to give up an appointment for study.
