It also covers the configuration changes using Terraform Apply and its options.

HashiCorp Terraform-Associate-003 Reliable Learning Materials | Valid Terraform-Associate-003 Exam Pass4sure

After the user has purchased our Terraform-Associate-003 learning materials, we will discover in the course of use that our product design is extremely scientific and reasonable. Details determine success or failure, so our every detail is strictly controlled. For example, our learning material's Windows Software page is clearly, our Terraform-Associate-003 Learning material interface is simple and beautiful. There are no additional ads to disturb the user to use the HashiCorp Certified: Terraform Associate (003) (HCTA0-003) qualification question. Once you have submitted your practice time, Terraform-Associate-003 study tool system will automatically complete your operation.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q28-Q33):

NEW QUESTION # 28

How would you reference the volume IDs associated with the `ebs_block_device` blocks in this configuration?

- A. `aws_instance.example.ebs_block_device[sda2,sda3].volume_id`
- B. `aws_instance.example.ebs_block_device.[*].volume_id`
- C. `aws_instance.example.ebs_block_device.volume_ids`
- D. `aws_instance.example-ebs_block_device.*.volume_id`

Answer: D

Explanation:

This is the correct way to reference the volume IDs associated with the `ebs_block_device` blocks in this configuration, using the splat expression syntax. The other options are either invalid or incomplete.

NEW QUESTION # 29

While attempting to deploy resources into your cloud provider using Terraform, you begin to see some odd behavior and experience slow responses. In order to troubleshoot you decide to turn on Terraform debugging.

Which environment variables must be configured to make Terraform's logging more verbose?

- A. `TF_LOG_PAIRH`
- B. `TF_VAR_log_path`
- C. `TF_LOG`
- D. `TF_VAR_log_level`

Answer: C

Explanation:

To make Terraform's logging more verbose for troubleshooting purposes, you must configure the `TF_LOG` environment variable. This variable controls the level of logging and can be set to `TRACE`, `DEBUG`, `INFO`, `WARN`, or `ERROR`, with `TRACE` providing the most verbose output. References= Detailed debugging instructions and the use of environment variables like `TF_LOG` for increasing verbosity are part of Terraform's standard debugging practices

NEW QUESTION # 30

While attempting to deploy resources into your cloud provider using Terraform, you begin to see some odd behavior and experience slow responses. In order to troubleshoot you decide to turn on Terraform debugging. Which environment variables must be configured to make Terraform's logging more verbose?

- A. `TF_LOG_PAIRH`
- B. `TF_VAR_log_path`
- C. `TF_LOG`
- D. `TF_VAR_log_level`

Answer: C

Explanation:

To make Terraform's logging more verbose for troubleshooting purposes, you must configure the TF_LOG environment variable. This variable controls the level of logging and can be set to TRACE, DEBUG, INFO, WARN, or ERROR, with TRACE providing the most verbose output. References = Detailed debugging instructions and the use of environment variables like TF_LOG for increasing verbosity are part of Terraform's standard debugging practices

NEW QUESTION # 31

A Terraform provider is NOT responsible for:

- A. Managing actions to take based on resources differences
- **B. Provisioning infrastructure in multiple**
- C. Understanding API interactions with some service
- D. Exposing resources and data sources based on an API

Answer: B

Explanation:

Explanation

This is not a responsibility of a Terraform provider, as it does not make sense grammatically or logically. A Terraform provider is responsible for exposing resources and data sources based on an API, managing actions to take based on resource differences, and understanding API interactions with some service.

NEW QUESTION # 32

A developer on your team is going to tear down an existing deployment managed by Terraform and deploy a new one. However, there is a server resource named `aws_instance.ubuntu[1]` they would like to keep. What command should they use to tell Terraform to stop managing that specific resource?

- A. Terraform destroy `rmaws_instance.ubuntu[1]`
- **B. Terraform state rmaws_instance.ubuntu[1]**
- C. Terraform plan `rmaws_instance.ubuntu[1]`
- D. Terraform apply `rmaws_instance.ubuntu[1]`

Answer: B

Explanation:

To tell Terraform to stop managing a specific resource without destroying it, you can use the `terraform state rm` command. This command will remove the resource from the Terraform state, which means that Terraform will no longer track or update the corresponding remote object. However, the object will still exist in the remote system and you can later use `terraform import` to start managing it again in a different configuration or workspace. The syntax for this command is `terraform state rm <address>`, where `<address>` is the resource address that identifies the resource instance to remove. For example, `terraform state rm aws_instance.ubuntu`

`[1]` will remove the second instance of the `aws_instance` resource named `ubuntu` from the state. References : Command: state rm : Moving Resources

NEW QUESTION # 33

.....

Sometimes if you want to pass an important test, to try your best to exercise more questions is very necessary, which will be met by our Terraform-Associate-003 exam software, and the professional answer analysis also can help you have a better understanding. the multiple versions of free demo of Terraform-Associate-003 Exam Materials can be offered in our website. Try to find which version is most to your taste; we believe that our joint efforts can make you pass Terraform-Associate-003 certification exam.
