

# Valid DCA Test Online - Examcollection DCA Dumps Torrent

BONUS!!! Download part of TestPassKing DCA dumps for free: [https://drive.google.com/open?id=1Z6g5n8z\\_BuhzPKkwCtyeROVAq7CFs5H](https://drive.google.com/open?id=1Z6g5n8z_BuhzPKkwCtyeROVAq7CFs5H)

If you can get a certification, it will be help you a lot, for instance, it will help you get a more job and a better title in your company than before, and the DCA certification will help you get a higher salary. We believe that our company has the ability to help you successfully pass your exam and get a DCA certification by our DCA exam torrent. We can promise that you would like to welcome this opportunity to kill two birds with one stone. If you choose our DCA Test Questions as your study tool, you will be glad to study for your exam and develop self-discipline, our DCA latest question adopt diversified teaching methods, and we can sure that you will have passion to learn by our products.

Our company has successfully launched the new version of the DCA study materials. Perhaps you are deeply bothered by preparing the DCA exam. Now, you can totally feel relaxed with the assistance of our DCA study materials. Our products are reliable and excellent. What is more, the passing rate of our DCA Study Materials is the highest in the market. Purchasing our DCA study materials means you have been half success. Good decision is of great significance if you want to pass the DCA exam for the first time.

## Examcollection Docker DCA Dumps Torrent & DCA New Dumps Questions

With DCA study tool, you are not like the students who use other materials. As long as the syllabus has changed, they need to repurchase learning materials. This not only wastes a lot of money, but also wastes a lot of time. Our industry experts are constantly adding new content to DCA Exam Torrent based on constantly changing syllabus and industry development breakthroughs. We also hire dedicated staff to continuously update our question bank daily, so no matter when you buy DCA guide torrent, what you learn is the most advanced.

Docker Certified Associate (DCA) Certification Exam is a globally recognized certification exam designed to measure an individual's proficiency in Docker technologies and practices. DCA exam is intended for IT professionals with a strong background in

containerization and Docker who are seeking to validate their skills and knowledge in this field. Successful completion of the DCA Exam will certify that an individual has a deep understanding of Docker technologies and can apply them effectively in real-world scenarios.

## Docker Certified Associate (DCA) Exam Sample Questions (Q20-Q25):

### NEW QUESTION # 20

A company's security policy specifies that development and production containers must run on separate nodes in a given Swarm cluster.

Can this be used to schedule containers to meet the security policy requirements?

Solution: label constraints

- A. Yes
- B. No

**Answer: A**

Explanation:

Label constraints can be used to schedule containers to meet the security policy requirements. Label constraints allow you to specify which nodes a service can run on based on the labels assigned to the nodes1. For example, you can label the nodes that are intended for development with env=dev and the nodes that are intended for production with env=prod. Then, you can use the --constraint flag when creating a service to restrict it to run only on nodes with a certain label value. For example, docker service create --name dev-app --constraint 'node.labels.env == dev' ... will create a service that runs only on development nodes2. Similarly, docker service create --name prod-app --constraint 'node.labels.env == prod' ... will create a service that runs only on production nodes3. This way, you can ensure that development and production containers are running on separate nodes in a given Swarm cluster. Reference:

Add labels to swarm nodes

Using placement constraints with Docker Swarm

Multiple label placement constraints in docker swarm

### NEW QUESTION # 21

Is this a way to configure the Docker engine to use a registry without a trusted TLS certificate?

Solution. Set INSECURE\_REGISTRY in the '/etc/docker/default' configuration file.

- A. Yes
- B. No

**Answer: A**

Explanation:

= Setting INSECURE\_REGISTRY in the /etc/docker/default configuration file is one way to configure the Docker engine to use a registry without a trusted TLS certificate. This option tells the Docker daemon to accept insecure connections to the specified registry, bypassing the certificate verification1. However, this method is not recommended, as it exposes the registry and the Docker engine to potential security risks2. A better way to use a registry without a trusted TLS certificate is to add the registry's CA certificate to the Docker daemon's trust store, as described in the Docker documentation3 or other online guides4. Reference:

1: How to build docker registry without SSL

2: Verify repository client with certificates | Docker Docs

3: "docker pull" certificate signed by unknown authority

4: Login to docker registry with client certificate under windows

### NEW QUESTION # 22

You are running only Kubernetes workloads on a worker node that requires maintenance, such as installing patches or an OS upgrade

Which command must be run on the node to gracefully terminate all pods on the node, while marking the node as unschedulable?

- A. 'docker swarm leave'
- B. 'kubectl cordon <node name>'
- C. 'docker node update --availability drain <node name>'
- D. 'kubectl drain <node name>'

**Answer: B**

**NEW QUESTION # 23**

Will this Linux kernel facility limit a Docker container's access to host resources, such as CPU or memory?

Solution: seccomp

- A. Yes
- B. No

**Answer: B**

**NEW QUESTION # 24**

Two development teams in your organization use Kubernetes and want to deploy their applications while ensuring that Kubernetes-specific resources, such as secrets, are grouped together for each application.

Is this a way to accomplish this?

Solution. Create a collection for for each application.

- A. Yes
- B. No

**Answer: B**

Explanation:

= Creating a collection for each application is not a way to accomplish this. A collection is a term used by Ansible to describe a package of related content that can be used to automate the management of Kubernetes resources1. A collection is not a native Kubernetes concept and does not group resources together within the cluster. To group Kubernetes-specific resources, such as secrets, for each application, you need to use namespaces. A namespace is a logical partition of the cluster that allows you to isolate resources and apply policies to them2. You can create a namespace for each application and store the secrets and other resources in that namespace. This way, you can prevent conflicts and limit access to the resources of each application. To create a namespace, you can use the kubectl create namespace command or a yaml file2. To create a secret within a namespace, you can use the kubectl create secret commandwith the --namespace option or a yaml file with the metadata.namespace field3. Reference:

Kubernetes Collection for Ansible - GitHub

Namespaces | Kubernetes

Secrets | Kubernetes

Managing Secrets using kubectl | Kubernetes
